29 Matter and Empty Universe-The Universe is created in common algorithm. The law and phenomenon natural
30 have very simple explanation. The micro and macro universes have one genuine origin. In other words the world
31 has one (absolutely) phenomenon of emergence display and affection beyond forties a time impression.

32 **1 D. I. Sanitsar**

33 We do not know what is the minimal and maximal both side unlimited of our universe system. I suppose in the
34 unlimited of Universe the matter transfers to emptiness. On the contrary from emptiness regenerate new matter.

35 **2 I.**

36 Matter and Empty Universe he Universe is created in common algorithm. The law and phenomenon natural
37 have very simple explanation. The micro and macro universes have one genuine origin. In other words the world
38 has one (absolutely) phenomenon of emergence display and affection beyond forties a time impression.

39 We don't know what electron and core atom is. We don't know neither what kind elementary particle composed
40 the electron, proton and neutron. Only we suppose that it is very small particle. What structure of this elementary
41 particles.

42 Just there elementary particles emitted energy when syntheses or disintegration atoms. It is energy of super
43 smaller elementary particle. Also we don't know about the minimal and maximal unlimited of our universe.

44 The very small particles compose elementary particle. The elementary particles compose atom, the atoms
 45 compose molecule, the molecules compose sun system, the stars compose galactic, and the galactic compose the
 46 universe. So on the contrary we are consider that point is infinitely then the stars compose the atom.

47 So far we have accepted unanimously that the world is consisted of electrons and protons, but we still don't
 48 know what is behind of electrons and atoms (beyond L1), neither we nor Universe our vision can imagine, galaxies
 49 etc. So we understand the matter exist is space, energy and time.

50 Author: Mathematician graduated from Moscow GP University, researcher clean technological field. Born in
 51 Ulaanbaatar Mongolia. e-mail: sanitsar@gmail.com So existing the matter exist space, if exist space then curing
 52 the time. We are thinking the time is passing unreturned. This is mistake, time returned. But by other way.
 53 Such as the water flow streaming down and water steaming evaporate to transferring in cloud, the rain bring get
 54 back and the water curing again. As for me the time has its nature of circulation. So I understand there must
 55 be in separable inter connection between the matter is it is existing in time. The time is we understand it must
 56 have its past. So there must be a future. Only in the material Universe the time curing from passes to future.
 57 In the emptiness the future transferred to pass.

58 Sense the mechanism Big bang is reflection of the moment future to past transformation. As we understand,
 59 these days, due to Big Bang the Universe is spreading to all direction and dimensions (beyond L2). The terming
 60 Big Bang is understand today as Natural cosmic disaster and we humanity is still on the way directed by this
 61 mechanism. In my view the mechanism of the Universe in our vision was not provoxt by one and only such an
 62 extreme blow. The sense of existence of our Universe innumerable and continues such explosions. Therefore you
 63 can understanding that PASS=FUTURE.

64 All the universe is consist over the rotary motion. Therefore some event from time to time return at regular
 65 reiterated. Such bodies the electrons or the world are said to have a motion of vibration or oscillation.

66 Every rotary mechanism has its physical impact: waves. Other words the waves born from matter circulation.
 67 From general physic the waves have inter affection positive and negative.

68 If we shall add different waves over each other the result shall produce diffraction. This kind of interference
 69 leading shape the diffraction. Rule of diffraction mechanism is under law subtraction and summation waves. We
 70 are called this diffraction named black hole and antipode supernova.

71 The universe is existing too many years eternally, everlasting. You see only short time interval of the existence.
 72 Every material substance has its mass, speed, inertia, and circulation and rotary motion mechanism. Black hole
 73 is not emptiness; this is only one of result diffraction of interference stars motion energy. Therefore black hole
 74 changing here disposition in long time.

75 And my question as when and where its shall end. I suppose the Universe unlimited; therefore the energy atoms
 76 stars, galaxies have shall reduce and disappear at the end of their tripe. In my vision this energy shall transferred
 77 to spiritual energy. In other words the sense of spiritual energy the existence it's into empty realty. The spiritual
 78 energy has memory, but has no notion of the speed. Therefore information instantaneously transmitted from one
 79 part of universe to another part of world and transferred to matter.

80 Thus, we have arrived to the point when where no time, no mass is and neither no space, in other words there
 81 shall be they absolute Neil.

82 The smallest particle forming an atom or the smallest particle, which we cannot define, can be reduced without
 83 limit till it is dissolved into emptiness. A galaxy, which is a concentration of stars, as well as the re-grouping or
 84 concentration of galaxies also turn into emptiness with the reduction of energy.

85 The emptiness of unlimited macro-universe L1 and the emptiness of unlimited micro-universe L2 are dissolved
 86 into each other, and constitute the only eternally connected thing. In other words, L1=L2 (L1 is equivalent to
 87 L2). At the unlimited of universe, the energy is exhausted and transferred to spirit. By the principle of Einstein
 88 which shows the equivalence of mass and energy, the mass will disappear and motion will stop. The matter
 89 transfers to emptiness. This is Emptiness of the emptiness.

90 Please don't confuse between emptiness and vacuum. So I mine vacuum is absolutely different of Neil. The
 91 vacuums have space and time, in emptiness hasn't space, energy, time and matter. If we stop all the motions of
 92 universe, the universe transferred also to empty. The space transform a nothing, the time transform nonsense.
 93 Some time our earth rotation motion has stopped but not definitely. Example of this occurrence is event of recent
 94 braking core of our earth. This time all mantle pressed from west to east by here inertia and create mountains
 95 flexure in east side each continents. May be this was Noah's Ark time, rise great tsunami and cover all dry land
 96 destroy life. Clarity trace of this great tsunami leaves in Gobi Mongolia.

97 Actually the phenomenon of absolute Neil or Emptiness as both beyond (Beyond L1=Beyond L2) is the very
 98 sense of the existence of the Universe. Our spirit connected with empty universe by specially mechanism of God.
 99 When infinitely transferred point, in empty spring up rotary moment under the spirit action this moment get
 100 energy.

101 The very sense of Natural is rotation any kind of energy in material suspense. Due to this mechanism or law
 102 of order as soon as material energy shall develop (or transfer) from spiritual energy they strength (scope and
 103 scale) it shall gain power and motion, leading to the standard existence of material.

104 Energy given mass and from empty appears matter. This matters compose super micro elementary particle,
 105 the super micro elementary particles composed neutron. Then constructed the space, and appear positively
 106 and negatively charged particles. Then compose atom. Transform unlimited the matter to emptiness and from

107 emptiness regenerates new super smallest matter. As soon as the matter comes in to existence shall be under
108 Law of Nature rules. There are unimagined versions of matter following destine. This destine shall depend under
109 the law of time. Sense of law is general for whole of Nature. Every kind of matter shall have its lifespan. But
110 where is end of existence (life and time). So sense something exists (birth present, past and future). Let's talk
111 about sense of Future. The sense future is the moment.

112 Every time renascent billion and billion new very small particles and disappearing billion and billion galaxies.
113 The Universe we are able to catch with our eyes and the technique we were able to design is a break capability
a human being could ever produce.
