Abstract

The study examines the intricacies that are inherent in the Nigeria's economic crisis since independence. The paradoxical state of Nigeria's economic as the giant of Africa attracts global attention. This study sheds light on the phases of economic development of the nation using historical methods. It surveys the place of agriculture in the Nigeria's economy before the discovery of petroleum in the 1950s. It is the central argument of this study that the transmogrification of Nigeria's economy from agric-based to petroleum-based that laid the foundation of the current economic crisis. The persistent flow of cheap petrodollars accruable from daily exploration of petroleum killed agriculture and led to massive rural-urban migration. Moreover, the problems of unemployment, corruption, wasteful and unrewarding execution of moribund projects by the government are products of petroleum economy in Nigeria.

Index terms— nigeria, economy, agriculture, petroleum, unemployment, corruption.

1 Introduction

Nigeria has witnessed cocoon of economic crisis since independence. It is a matter of bewilderment to many people why Nigeria, despite of its enormous human and material resources, continues to groan in economic crisis. To some scholars, the matter is seen as a default while others view it as design. Thus, it becomes a sine qua non to historically investigate this matter by way of subjecting the scenario into serious academic scrutiny in order to deduce or advance possible effects of Petroleum on Nigeria's economy. This is done with stringent analogical mechanism through comparative index of economic apparatus using historical tool of analysis. The first question that bothers the minds in this context is, why is Nigeria still remains in economic comatose despite huge petrodollars accruable from daily exploration of the black gold since 1960s? Secondly, why are other nations of the world, like, Saudi Arabia, Indonesia, Qatar, Bahrain, Kuwait, Abu Dhabi, Libya, Iraq, Iran, Norway, Egypt and Oman which are also blessed with the same resources are able to transform from zero level to the level of international recognition with petroleum? ??(Lewis, 2007: 10-14) An attempt to situate the above has warranted a quest for pragmatic assessment of the economic situation of Nigeria before the discovery of petroleum.

2 II.

Nigeria's Economy Before the Discovery of Crude oil Agriculture was the dominant source of Nigeria's economy before the discovery of petroleum in 1956. Agriculture thrives in favourable climatic conditions. The climatic factor is significant, not only in relation to its effect on the character of the vegetation, but it also plays a dominant role in the ways of life, including the pattern of economic activities of the various people. As in other part of the tropics, rainfall is the most important element of climate in so far as agriculture, the main occupation of Nigeria's people. The rhythm of economic activity which is revealed in the farming calendar of the various parts of the country is controlled by the incident and distribution of rainfall as well as the rainy season, which decreases from south to north. Mangrove region of the southern Nigeria with high rainfall per annum supports the growth of

43 palm trees, rubber, coffee and cocoa etc. The savannah grassland to the north supports the planting of cereal
44 and leguminous crops such as sorghum, millet, ground nuts as well as animal rearing mostly for hide and skin ??
45 Ekundare 1973:56-56; Ake 1985:102-106). Agriculture was the mainstay of Nigeria's economy from the earliest
46 time up to 1950s. Indeed, Nigerians had an enviable record of food sufficiency but the era did not last beyond
47 the 1960s when its economy began a descent into an abysmal dependence on imports.

48 As part of the efforts to integrate Nigeria into global economy, cash crops were introduced to Nigeria by the
49 Europeans from South America and India ??Oluwasanmi 1960: 34-36). Palm oil became an export commodity
50 in Nigeria as far back as 1558; and by 1830, the Niger Delta, which now produces crude oil, had become the
51 major source of palm oil which dominated Nigeria's export list for more than 50 years ??Olukoju 2009:105-125).
52 Cotton joined the export list in 1856, while cocoa was introduced and became an export crop Year 2015 (E)

54 Abstract-The study examines the intricacies that are inherent in the Nigeria's economic crisis since independence.
55 The paradoxical state of Nigeria's economy as the giant of Africa attracts global attention. This study sheds
56 light on the phases of economic development of the nation using historical methods. It surveys the place of
57 agriculture in the Nigeria's economy before the discovery of petroleum in the 1950s. It is the central argument
58 of this study that the transmogrification of Nigeria's economy from agric-based to petroleum-based that laid
59 the foundation of the current economic crisis. The persistent flow of cheap petrodollars accruable from daily
60 exploration of petroleum killed agriculture and led to massive rural-urban migration. Moreover, the problems
61 of unemployment, corruption, wasteful and unrewarding execution of moribund projects by the government are
62 products of petroleum economy in Nigeria. This study argues that it is only the diversification of the economy
63 embracing various sectors such as agriculture, mining, and manufacturing that can rescue the nation from the
64 current economic doldrums. It is this strategy that has the potential of creating jobs for the teeming unemployed
65 population of the youths as well as boosting the foreign exchange earnings of Nigeria. It also has the capacity
66 of ameliorating the high insecurity, insurgencies and insurrections, which are currently threatening the corporate
67 existence of the nation.

68 A Historical Perspective of Petroleum on Nigeria's Economic Crisis Since Independence in 1895 ??Olukoju
69 2009:117). Together with rubber, groundnut, palm kernel and Bennie-seed in later years formed the major
70 valuable crops. These cash crops formed the main source of revenue, export and foreign exchange for the
71 government ??Udo 1967: 18). It is very important to note that the economy generally recorded tremendous self-
72 sustaining growth and expansion before crude oil became the mainstay. Nigeria boasted of its groundnut pyramids
73 in the north and Cocoa in the west. Palm oil also existed in commercial quantity in the east. Revenue from
74 agriculture was appropriately used to build landmark social and economic infrastructure, providing basic services
75 like education, health, water and electricity supply. This enhanced farm settlements and cottage industries
76 to service agriculture, providing vast employment opportunities for the people. In respect of food, the nation
77 was self-sufficient before the era of crude oil. Agriculture provided 95% of the food needed to feed Nigerians,
78 contributed 64.1% Gross Domestic Product (GDP) and employed over 70% of Nigerian population before oil
79 began to be exported ??Oluwasanmi 1960: 23-29).

80 Evidently, there was no jobless person in Nigeria during this period as everybody had job to do in the farms.
81 Both the young and old people carried out farm works. Even the government workers still engaged in farm
82 businesses. They went to their various farms on Saturdays and during holidays or when they were on leaf. This
83 helped them to complement as well as increasing their per capital incomes. As part of the social responsibility,
84 this system of industry and commitment to farm duty were well inculcated into the lives of the young ones.
85 For examples, schools at all levels acted as agent of socialization to uphold this social norm. For example,
86 from Primary School, farming was put into practice. Every school had its farm in which all pupils/students
87 participated during gratis usually once in a week. (Garba, 2014) Apart from serving as means of food production
88 for the population, it also served as an avenue to impact the principles of farming to the pupils and students,
89 which was expected to be part and parcel of their lives. Pupils and students sang songs on the assembly grounds
90 and on gratis day to reflect as well as to instil the consciousness of farming as a national symbol. This song was
91 translated in all languages across Nigeria:

92 Farming is our national occupation, he who does not work, will steal education without hoe and cutlass is
93 incomplete.

94 In the first generation Nigerian tertiary institutions, these principles were keenly practiced. There were
95 University Farms where foods were produced for the growing population of Nigeria and raw materials for agro-
96 allied industries. We can argue conveniently that Nigerians universities served its purpose as research centres.
97 Internally generated revenues for execution of university's projects without necessarily depending overwhelmingly
98 on the Federal and State Governments abound.

4 III.

5 The Discovery of Oil in Nigeria

101 The search for Petroleum in Nigeria started in 1908 at Araromi area of the present Ondo State by a German
102 Company known as Bitumen Corporation ??Afe 2008: 28-32). This made Araromi the first camp of oil exploration

103 outfit in Nigeria. However, Nigerian Bitumen Corporation ceased exploration as a result of the outbreak of
104 World War I, which broke out in 1914-1918. In 1937, the Shell 'D' Arcy, which later became Shell BP Petroleum
105 Development Company of Nigeria Limited, entered the oil exploration scene in Nigeria. However, the outbreak
106 of World War II forced the company to suspend activities in Nigeria in 1941, but resumed activities again in 1946
107 (Afe 2008: 30). The first deep exploration well was drilled in 1951 at Ihuo, 16 kilometres northeast of Owerri,
108 to a depth of 11, 228 feet, but no oil was found (Bamigbon:2009). Oil was later discovered at Akata well, which
109 was drilled in 1953 but was suspended in 1954 due to its few quantity.

110 However, in January 1956, oil was discovered in commercial quantity at Oloibiri, now in Bayelsa State, by
111 Shell BP (Fregene 1998:64-72). Towards the end of the same year, a second discovery was made at Afam now
112 in Rivers State. The first Cargo crude oil left Nigeria in February 1958, when production stood at 6,000 barrels
113 per day with revenue accounted for about \$122 million. This contributed 0.08% to the National Revenue. As a
114 result of Shell's success in the mid 1950s and thereafter, other companies, notably, Mobil, Gulf (Chevron), Agip,
115 Safrap, (later Elf), Tenneco (later Texaco), Philips Great Basins Texaco Overseas and Union, joined Shell in
116 prospecting for oil (Fregene 1998:66). The number of both international and local companies prospecting for
117 Nigerian oil increased tremendously over time. The table below shows the number of oil companies that operated
118 in Nigeria up to 1998. The above shows an increase of oil production and revenue over a period of time. Between
119 January and June 2003 for example, Nigeria had a financial wealth of \$961.6 billion from crude oil. From July to
120 December of the same year, the production of 405.09 million barrels, which sold at \$28.10 a barrel, brought \$1.57
121 trillion (US \$11.38 billion) into the national treasury. Later, excess crude oil receipt gave Nigeria an additional
122 \$128.41 billion between May and December 2003 (Akintunde 2004:1&7). A monthly breakdown shows that
123 in May, \$7.65 billion was earned, June \$13.67 billion, July \$15.24 billion, August \$9.7 billion, September \$22.12
124 billion, October \$14.17 billion, November \$14.32 billion and \$21.52 billion in December (Awajokwaan 2004:15).
125 There was an appreciable increase in the production of crude oil and it was sold at the high price on the world
126 market since Nigeria's oil was preferred due to its high quality. Nigeria is rated among the leading exporters of
127 crude oil to United States of America. The IV. The Effects of Petroleum on Nigeria's Economy

128 6 Company

129 The effects of Petroleum exploration on Nigeria are multiple. This can be divided into two -positive and negative.
130 Many scholars have argued that petroleum has brought great advancement to the Nigeria's economy. The
131 discovery of petroleum according to Rilwan Lukman, one time Minister of Petroleum and former President,
132 Organization of Petroleum Exporting Countries (OPEC), during the researcher's personal interview with him,
133 asserted that petroleum has indeed brought good and evil things to Nigeria (Rilwan 2010). He believed that Oil
134 has provided for the country considerable resources which have been deployed into various projects and have kept
135 the economy going. In the first instance, according to him, more states and local governments have been created.
136 Roads, air and sea ports were also constructed. Nigeria was able to execute two and half year civil war without
137 indebted to any nation. Schools, primary, secondary, colleges of education, polytechnics and Universities were
138 built across the nation through oil money. He however decried the discovery of oil and its poor management as
139 being responsible for the decline of agriculture in Nigeria.

140 Even though, the above postulations were to a large extent correct, we cannot also overlook the problems
141 that have come upon Nigeria due to the discovery and long exploration of oil. In the first instance, Nigerian
142 government jettisoned agricultural that had been the main economic drive of Nigeria before the discovery of
143 oil. This has turned Nigeria into a monocultural economy. For example, in the Niger Delta, the region that
144 harbours the crude oil, men completely abandoned agriculture to women for menial jobs in the oil companies.
145 Frank Kokori, a frontline trade unionist, corroborated this further when he noted during an interview that, "the
146 advent of oil in Nigeria marked an unfortunate turning point in the nation's history as it led to the emergence
147 of a crop of lazy citizens who lost the initiative to be productive." (Kokori 2010) He pungently pressed home his
148 view when he lamented thus: "The country became a dumping ground for imported goods as cheap dollars flowed
149 ceaselessly from petroleum? the sad commentary about Nigerian situation are that it is one of the few countries
150 that pump out more than two million barrel per day and still live in this primitive infrastructural situation? Oil
151 boom has become oil doom." (Kokori 2010) Other regions like in the north, which had been the major supplier of
152 groundnut, and hide and skin; west for production of cocoa and coffee; and east for palm oil and kernels; all, have
153 abandoned agriculture. The immediate implication is, the production of the aforementioned products have gone
154 into outer oblivion. Not only that, Chief Arigbabu Solomon lamented that Nigeria's agriculture has fizzled out
155 to the level that the nation is now a net importer of food where it was once known for its import of agriculture
156 produce at the international market (Arigbabu 2013). The oil boom that started in 1973 prompted the Federal
157 Government to embark on bogus but unrewarding projects at the expense of agriculture, which on the long run
158 did not translate to any development or contributing any meaningful impact on the people.

159 Apart from this, petroleum has been the major factor responsible for the rural-urban migration in Nigeria.
160 The youths, who are suppose to be the backbone of the workforce of the nation continue to Figure III : Petroleum
161 Exportation index of some selected countries up to year 2000 migrate into the urban centres in search of white
162 collar jobs that are not available. This has a great consequence on the Nigerian economy. In the first instance, it
163 increased the population of unproductive in the urban centres, which in returns bears an unbearable force on the
164 available infrastructure. The social menace of armed robbery, pick-pockets, prostitutions, gansterisms A good

example is the moribund Ajaokuta Iron and Steel Company in Kogi State of Nigeria. The government proposed and spent billions of dollars for constructing the complex of the Steel Company. The first phase of the project covering an area of about 172 hectares of land at Ajaokuta was commenced in 1977 (Oyeyinka 1995:293). A similar project was the construction of three inland rolling mills with capacities of 210,000t each was embarked on simultaneously in Jos, Katsina and Osogbo to complement as well as to enhance operations of the Ajaokuta Iron and Steel (Ajaokuta Project Report 1975). The projects were handled by German and Japanese firms. The first phase of these projects was commissioned in 1982 (Ajaokuta Project Report 1977). By 1986, they have become enclaves of wide animals because of economic crisis due largely to government mismanagement of resources and lack of vision. (Ojo, 2014) argued that if the government has sustained the project, it would have not only been an asset to Nigerians only, but all West Africa sub-region. He estimated that all core engineers in the field of Civil, Mechanical, Electrical, Metallurgic, Water and Mining in the whole of West Africa would have been insufficient as man-power capacity needed in the company.

Similarly, Petroleum has also led to the legalization, institutionalization and canonization of corruption in Nigeria. It is tacitly prophetic, when Juan Pablo Perez Alfonso, the former Venezuela Oil Minister, called oil, "the devil excrement" (Sachs and Wrner 2012:106). This seems to have captured the views of many Nigerians who despite millions of petrodollars accruing daily to the nation still perceive it as a curse. The table shows persistent growth of corruption over the years. Maitama Sule, Nigeria's first Minister of Petroleum and one time Nigerians' Ambassador to the United Nations, targetly hit the point when he argued that, "it is quite unfortunate that too many of Nigeria's leaders are not doing nearly enough to drag the followers into the 21st century that would enable them to enjoy the best possible existence." (Tajudeen 2008:26) He lamented on the ugly nature of the leaders thus: "The majority of Nigeria's leaders are blatant thieves, incompetent morons, uninspiring mediocrities? and primitive, visionless or just plain lazy? too many of them squander their energies on ultimately futile political shenanigans or irresponsible partying? even the few who are smart, well-intentioned and willing to control their acolytes are too easily distracted and pretty disorganized and unproductive compared to He averred that military incursion into the Nigeria's politics derailed the vision of the founding fathers of the nation? succeeding generations of leaders, he said, had done little to qualify as leaders?almost all? suffered the affliction of greed, corruption and immorality (Kogbara 2013: 5). On the same terrain, Chinua Achebe became worried about the menace of corruption and its possible danger for Nigeria when he reiterated that corruption has passed the alarming and entered the fatal stage, and Nigeria will die if the leaders continue to pretend that she is only slightly indisposed (Achebe 2012: 249). economy such as agriculture, mining and industry has far reaching effects that have brought the country into the state of socio-political and economic anomy. In the first instance, the implication of over dependent on oil and negligent of agriculture began to manifest from 1980, when the problem of unemployment began to gather momentum in Nigeria. As at today, the problem with its accompaniments of crimes such as, armed robbery, kidnapping and Boko Haram among others have risen to the point that the corporate existence of Nigeria is threatened. Crime has grown to almost unmanageable level to the government at all levels. It appears the government is bereft of the way out. Obviously, it is the problem of unemployment that gave rise to the unlawful business of human abduction for ransom in Nigeria today. In this phenomenon, the rich or wealthy personalities in the society are kidnapped and kept hostage in kidnappers' den. He is allowed to communicate with his family members or associates through phone call to pay a fixed ransom to a designated account provided by the abductors. At times the abductors made deal of bargains with the relatives or associates to pay a fixed price or they choose the option of losing the victim. The unbearable danger and suffering the victims are exposed to usually make them agree to whatever amount the abductors demand in order to regain their freedom from the kidnappers' gulags even if the ransom demanded is to be borrowed. Uche Igwe argued in support of the above opinion that the problem of unemployment and poverty are two major factors exacerbating the rising violence and insecurity in Nigeria society (Uche 2014:22). Nigeria with its enormous resources and potentials is currently ranked among the poorest countries in the world. This was confirmed by the United Nations Education Scientific Organization (UNESCO) in its 2010 Global Monitoring Report, which revealed that about 92% of the Nigeria's population survives on less than 2 dollars daily while about 75% survives on less than a dollar daily (Amaku, et al:6). This probably informed the World Bank report estimation that 70% of the Nigeria's population lives below the poverty line. Thus, it concludes that the greatest challenge besetting the country is poverty amidst plenty.

It is factual that over dependent on oil has over the years promoted political turbulent in Nigeria. The political system in Nigeria is structured in such a way that the power that controls the political systems also controls the economy. This has elicited the development of die-hard politicians and even occasioned military intervention in Nigerian politics since 1966. The inordinate desire of the politicians to stay in power indefinitely and the military quests to rule hinge principally on the desire to control the resources generally referred to as "national cake". The Nigeria's federation is structured in such a way that the formula for sharing the resources favours the central government while the component bodies of the system are mere appendages. This over the years had resulted in the struggle for the controls of the centre. The implication of this development in another dimension has given rise to the awakening of consciousness for struggle for resource control. In the case, the agitation in the Niger/Delta region, which harbours the petroleum resources, will surface. The crisis in the region followed when the petroleum became the basis of the fiscal existence of Nigeria since 1970. The successive institutionalization of revenue sharing and power distribution tended to reinforce the politicisation of

228 ethnic identity, and its mobilization in the struggle for power. Apart from the exclusion from the mainstream
229 politics in Nigeria, the people of Niger/Delta capitalized on the environmental degradation to attract internal
230 and international attention. This is located in the realm of environmental pollution, which oil explorations have
231 brought. The untold environmental pollution and degradation of their soil and water advertently necessitated
232 the interest of their elite.

233 It derives ideological impetus from the activities of the Ogoni and Ijaw people, who inhabited the area. The
234 Ogoni people under late Ken Saro-Wiwa formed the Movement for the Survival of Ogoni People (MOSOP). Ken
235 Saro Wiwa and his people were able to attract international sympathy to the plight of the people of Niger/Delta,
236 using his own people, Ogoni, as a point of reference. The point of argument is located in the fact that, the
237 advent of oil exploration seems to have brought nothing good to the people in the region but massive ecological
238 devastation through oil spillage (Eboe 1985: 56; Naanen 1995:109; Claude 1985: 43). The perceived laxity
239 demonstrated by the Federal Government to the plight of the people led to the formation of a militant group
240 known as Movement for the Emancipation of the Niger Delta (MEND). The group indiscriminately targeted
241 foreign multinational companies involving in the oil industry to destroy their installations blaming them for the
242 poverty and exploitation of local people and associated pollution, which has turned many of the fish-rich creeks
243 into stagnant pools. Similarly, the militant groups also harry and abduct expatriates exploring petroleum in the
244 Niger Delta to collect ransom from their various companies.

245 One issue that appears to have spurred anti-oil protests in the Niger/Delta, was the question of derivation as a
246 revenue allocation formula. Some scholars are of the views that a fixed proportion of the generated revenue in a
247 local area should be retained for the development of the area. The people in the Niger/Delta saw the formula as
248 a form of palliative measure that would relieve them of their plight. Some decades later, it would appear that the
249 Federal Government budgets were becoming increasingly depended on oil revenue, Niger/Delta, the oil producing
250 region was allocated small proportion of the generated revenue from the region. The improper handling of the
251 situation by the government led to the increasing wave community unrests and protests which became intensified
252 in the 1990s at the behest of the Movement for the Survival of Ogoni People (MOSOP) (Oketie, 2008:121-126).
253 It appears from the last two decade, ethnic consciousness towards what is accruable to them from the government
254 became topical in any national issue. This partly advertently or inadvertently fans the ember of corruption in
255 Nigeria.

256 V.

257 7 Conclusion

258 The prevailing Nigeria's economic challenges started shortly after independence. Its foundation is however,
259 traceable to the discovery of petroleum and its exploration and management overtime. Before independence,
260 Nigeria's economy, although based on agric-economy was viable and self sustaining. However, the discovery of
261 petroleum and its exploration enhanced cheap and consistent flow of foreign exchange earnings. It appears the
262 persistent governments in Nigeria were bereft of what to do with the money. Instead of seizing the opportunity
263 to stimulate economic diversification that could lay a solid foundation for the future, they embarked upon
264 unrewarding projects for self aggrandisements. The weakness displayed by the successive governments both
265 democratic and military in the past is having biting consequences on the present economy. Indeed, lack of
266 admirable political aptitude demonstrated by the earliest political gladiators after independence, necessitated
267 the military intervention in Nigerian political scene from 1966. It would appear the triumphant entry of the
268 military into politics was eclipsed with great words of hope and transformation agenda. Instead of acting as
269 stimulus for economic change they became social vampires. They did not only encourage corruption but logically
270 legitimized it. In the midst of this balderdash, the Nigeria's economy collapsed giving way to the survival of
271 the fittest and smartest in the usage of the apparatus of corruption (Egbogah, 2006: 37-43). The disillusioned
272 youths in the system give solace to the option of violence, gangsterism and other social shenanigans to press
273 home their grievances, which is a nucleus of the current unrests in the nation. The insecurity challenges currently
274 facing the country cannot in anyway be detached from the economic challenges that have engulfed the nation
275 for long. This paper advocates diversification of Nigeria's economy from mono-petroleum economy to economic
276 diversification that embraces all economic sectors such as agriculture, mining and manufacturing.

Figure 2:

7 CONCLUSION

Countries	Import Thousand Barrels per day	% of Total Import	% of Domestic Production Supplied
Canada	2,408	19.4%	11.3%
Mexico	1,487	12.0%	7.0%
Venezuela	1,485	12.0%	6.9%
Saudi Arabia	1,471	11.9%	6.9%
Nigeria	1,246	10.0%	5.8%
Angola	435	3.5%	2.0%
Algeria	405	3.5%	1.9%
Iraq	390	3.1%	1.8%
Virgin Islands	335	2.7%	1.6%
Ecuador	324	2.6%	1.5%
Others	2,422 12,408 5,384	19.5%	11.1%
Total OPEC Countries		43.4%	25.0%
Persian Gulf Countries	2,166	17.5%	10.1%
