Strengthening Ihsan Behavior (Always do the Good Deeds) Iffah Budiningsih Received: 10 September 2021 Accepted: 5 October 2021 Published: 15 October 2021

5 Abstract

⁶ The purpose of this study was to determine the best model in predicting ihsan behavior,

⁷ especially during the Covid 19 pandemic as it is currently from eight ihsan character:

⁸ ambitious, certain/confident, courageous, hard-working, enthusiastic, patient and persistent,

⁹ generous, and grateful. The method of research was survey and 215 students at As Syafi?iyah

¹⁰ Islamic University were selected as the sample. The results revealed that: a) only three out of

¹¹ eight qualities that significantly influenced the development of ihsan behavior, namely

¹² ambitious, patient persistent, and generous; b) the qualities of ambitious, patient persistent,

¹³ and generous simultaneously contributed to shaping ihsan behavior by 58.5

14

15 $Index \ terms$ — ihsan behavior, generous, , ambitious.

¹⁶ 1 Introduction

ducation functions to enhance both technical skills and positive qualities, including moral and positive values. These two aspects are crucial for people to equitably possess in order that they can get through this global era, improve life quality, and avoid destruction. Lack of religious, moral, and positive values will lead to a destructive application of science and technology, such as war and abuse, which can also be impactful on changing the essence of humans and humanity, viz; genetic revolution (cloning). Humans tend to misuse science and technology; thus, moral and religious values are considered of great importance. Such values can guide and control the use of

science and technology for human's virtue without demeaning or changing the nature of humanity.

Moral and religious values education in children is mostly implemented by their family and the surrounding 24 environment. One's values will be a reference to shaping their characters that also influence their act or behavior. 25 Characters are positive values inherent in humans from the process of long-term habituation. They are embodied 26 27 in thoughts, attitudes, feelings, words, and acts. Parents, schools, and all educational institutions should be 28 held accountable for character education. As mentioned earlier, positive characters or qualities undergo a long process, in terms of continuous habituation, on a daily basis. ??smail (2018: 111) claims that Ihsan is one of the 29 essential teachings in Islam, yet it is not primarily understood. Ihsan means 'excellence' and "try to be better', 30 so that ihsan behavior refers to doing good deeds and becoming better. In the Qur'an Surah Al-Qasas [28:77], 31 we are instructed to do good as Allah has done good to us. By making Allah the center of orientation, we will 32 reach success and avoid a sinful act. Surah Al-Qasas [28:77] means: 33

"And seek with the (wealth) which Allah has bestowed to you the Hereafter, and do not forget your share (enjoyment) of this world, and do good (to others) as Allah has done good to you, and do not make mischief in the land. Indeed, Allah does not like those who do mischief".

In addition, according to ??smail (2018:113-114), the command of doing ihsan does not only revolve around worship, but also working and doing business. It generally has a particular meaning of a) doing something properly with utmost responsibility; b) achieving better than others, implying that we need to be one who is foremost in good deeds not who wrongs one-self.

Many qualities affect the behavior of ihsan. An in-depth interview with 17 university students (eighth semester) in the academic year of 2019/2020 reveals that there are three out of eight qualities that dominantly influence ihsan behavior (based on respondents' perceptions). Below is the detail. It is expected that this study can discover a mathematical model to improve Ihsan behavior, i.e., what qualities that dominantly affect such behavior. Following the results of the in-depth interview with 17 respondents, the respondents are presumed to have the qualities of being grateful, certain/confident, patient & persistent that strongly influence ihsan

behavior. The purpose of this study is to find a mathematical model that can grow and strengthen positive 47 qualities 'ihsan behavior' in living the life. This model can be utilized by educators/teachers, parents, and other 48 people in shaping and strengthening positive characters to the successor to today's generation of Indonesia that 49 dominantly affect ihsan behavior. On that ground, this study is conducted to paying attention to eight positive 50 qualities that mostly influence one's ihsan behavior, especially during the Covid 19 pandemic as it is currently, and 51 namely ambitious, certain/confident, courageous, hard-working, enthusiastic, patient and persistent, generous, 52 and grateful. Additionally, the problem formulated in this study is whether or not there is a positive and 53 simultaneous correlation between eight qualities mentioned above and ihsan behavior; the dominant qualities 54 that influence ihsan behavior; and the best mathematical model (Good of Fit Model/Gof Model) to predict 55 such behavior. Below is the detail of the concepts of ihsan behavior, along with eight positive qualities that are 56 presumed to affect ihsan behavior. 57

⁵⁸ 2 a) Ihsan Behavior

In the realm of Islam, the attempt to always do the good deeds (do not make mischief) as Allah has been good 59 to us is known as Ihsan. It is also stated in the Qur'an Surah Al-Qasas [28:77] that means: "And seek, with the 60 (wealth) which Allah has bestowed to you, the Hereafter, and do not forget your share (enjoyment) of this world, 61 and do good (to others) as Allah has done good to you, and do not make mischief in the land. Indeed, Allah does 62 not like those who do mischief". (QS. Al-Qasas/28:77). ??hwanto et al. (2017: 9) point out that the values of 63 ihsan behavior are in three scopes of qualities, including ihsan knowledge, ihsan feeling, and ihsan action. Ihsan 64 knowledge, in particular, refers to the cognitive dimension developed by Bloom in ??nderson & Kratwohl (2001: 65 28), i.e., remembering, understanding, applying, analyzing, evaluating, and creating. ??smail (2018:113-127) also 66 explains that ihsan behavior associates with working professionally, and in Islam perspectives, is impacted by five 67 factors, as follows: a) intention (work commitment and motivation; b) knowledge/competence; c) capability; d) 68 time management, and; e) technological support. Next, ??akar (1994:11) opines that Islam does not only teach 69 what we have to do (skill), but also what we need to know (competence). Accordingly, ihsan behavior requires 70 competence and skill to work. Time management is also necessary to support work quality (ihsan behavior) for 71 Islam views time management as worship, and ignoring time means a big loss that cannot be recovered as written 72 in the QS. Al-'Asr (103):1-3. In this period of intense competition, technological support is vital to help the process 73 of having done work quickly and accurately. Therefore, technology literacy is highly required in all aspects of life 74 in order to finish the work effectively (ihsan behavior). The United Nations in the book entitled United Nations 75 Competency Development-A Practical Guide (2010:109) mention positive indicators of technological awareness, 76 which are a) keeping up with technology; b) comprehending the application and limitation of technology to work; 77 c) making an effort to apply technology for appropriate tasks; d) showing willingness to learn new technology. 78 Furthermore, ??ahab & Ismail (2019:198) explained that in general the characteristics of Ihsan's behavior include: 79 sincere & efficient work, generous, high responsibility, love to help, very careful in working, able to go the extra 80 mile to achieve optimal performance. Ultimately, ihsan behavior refers to performing good deeds regularly and 81 striving to better what has been done. This behavior is characterized by a) taking on responsibilities for the work 82 (commitment); b) work motivation; c) improving competencies (knowledge, skill, and attitude); d) possessing 83 84 time management skills; e) having the ability to use technology.

85 3 b) Ambition

Ambition is a strong desire as the starting point to achieve or create something big. As argued by ??ulk 86 (2013:100), ambition refers to a picture of the desired future, not a complicated plan with quantitative objectives 87 and detailed actions. It is future goals to reach based upon today's reality. A weak desire will not certainly produce 88 significant results or improvement. ??smail (2018: 44-45) notes that being ambitious has three functions, viz; 89 a) as a blueprint to ease the process of achieving the desire; b) as a direction to arrive at the desire; c) as a 90 trigger to act. Moreover, ??ill (2013: 23-24) states that a vision is not a dream nor wishful thinking, yet it should 91 be followed by a) goals, in which the ambition or desire is vividly and specifically depicted, so that it will be 92 measurable, observable, and achievable in a certain period; b) strong desires, in terms of setting up one's sights 93 on actualizing the desires with sacrifice, time, and realistic plans; c) persistence to achieve the desires and to 94 address every challenge one confronts. All in all, ambition is defined as a strong desire as the starting point to 95 result in a great thing with the following indications: a) measurable goals; b) strong willingness to realize the 96 desires; c) persistence to reach the desires; d) continuous follow-up plans. 97

98 4 c) Certainty/Confidence

From the epistemological review, the word certainty comes from Arabic al Yaqin that literally means science/knowledge so that the truth is achieved. In the perspective of Islam, certainty is viewed as belief or conviction, referring to a mental condition when a person realizes that his/her opinions and actions are right. Besides, certainty is also considered mental assurance that something is right or valid. As a mental attitude that is based on what is considered true, certainty has become a powerful feeling, making it hard to alter and be altered. An individual with substantial certainty usually had firm and consistent life principles or norms. However, certainty is dissimilar to preference; preference is negotiable, whereas certainty is the other way around. According to Ilyas (2018: 50), in Islamic epistemology, 'truth' has some degrees, as follows: a) refers to knowledge (assumption); b) measurable vision; c) the level of truth gained through experience (not only by sight) so that one will find out that his/her act is 'true' through self-talk. ??lias (2017:15) mentions two degrees of knowledge certainty, which are positive certainty and negative certainty. The negative knowledge certainty can be deprived by the values of making it turn to positive knowledge certainty. In conclusion, being certain or confident is a mental condition and affective state that is appreciative of the truth. It is affected by several factors, including a) striving for the truth; b) strong life principles and norms; c) knowledge mastery; d) positive thinking; e) self-talk.

¹¹³ 5 d) Courage

In Arabic, courage is widely known that refers to a mental attitude leading someone to have a willingness to 114 keep moving forward, be persistent and fearless. Muslims are obliged to strive for goodness (ihsan behavior), as 115 narrated by Abu Hurairah in Shahih Muslim: "Strong believers are better and more beloved to Allah than weak 116 believers". From the perspective of Islam, courage is viewed as the base of noble morals. Imam Ghazali in Ilyas 117 (2018: 55) regards courage as one of the five items for devout Muslims. The other four include a) knowledge and 118 wisdom; b) generosity; c) justice; d) honesty. Moreover, Ilyas expresses that a courageous person is characterized 119 by a willingness to sacrifice for goals and desires, as well as to take risks. ??ing (2010: 37) claims that courage 120 is influenced by a) visions or goals to be achieved; b) actions or efforts in reaching goals; c) passion or situation 121 to bear up in achieving goals. If these matters are met, a person can deal with anxiety, doubt, and fear. To sum 122 up, courage is a mental attitude that makes an individual willing to move forward, be persistent, and fearless to 123 fulfill the desire or to maintain glory and honor. Being courageous is indicated by a) willingness to sacrifice for 124 success; b) being generous; c) willingness to take risks. 125

¹²⁶ 6 e) Hard Work

In the realm of Islam, hard work is viewed in many dimensions, i.e., physical, intellectual, and spiritual. Hard 127 work, as defined by Hariyoto in ??andayani & Sumaryati (2014: 31), is a persistent effort, with no despair, to 128 succeed. Ilyas (2018: 67-75) argues that hard work comprises three meanings, including: a. Physical hard work or 129 effort: working to produce something tirelessly, staying oneself away from indolence and temptation, along with 130 being disciplined. b. Intellectual hard work or effort: innovative thinking in the form of being creative, critical, 131 and breaking out of comfort zone in order that new opportunities and value-added are created. c. Spiritual hard 132 work or effort: an ability/effort to live a meaningful life, i.e., how one can do good to others more excessively. 133 d. Moral hard work or effort: an ability to take a good act (according to prevailing religious norms in society) 134 consistently; if applied in a long-term manner, moral hard work will be a character. 135

Ardi in Handayani & Sumaryati (2014:31) describes the characteristics of hard-working people, namely being
determined, tenacious, careful, disciplined, patient, sincere, persistent, valuing time, and working smartly. In
short, hard work is one's ability and strength that involve physical, intellectual, moral, and spiritual efforts
to arrive at the goals, as indicated by a) producing something tirelessly/keeping oneself away from indolence;
b) being highly disciplined; c) being innovative, creative, critical, and breaking out of comfort zone; d) doing
good/being helpful more excessively to others; e) obeying prevailing religious norms and ethics.

142 7 f) Ghirah/Enthusiasm

In this study, Ghirah means an awareness of always moving forward to succeed; if necessary, a person should be 143 very successful beyond limits at whatever s/he does. The Prophet Muhammad encourages us to be jealous of 144 the high-flyers. There is enthusiasm in ghirah that has some literal meanings, such as: a. A feeling of excitement 145 (inspiration as if by a divine or superhuman power); b. Great eagerness in human's soul that comes from the 146 [strength of] God; c. Determination that refers to a positive emotion and persevering efforts towards difficult 147 goals despite obstacles. It is not only a cognitive state, but also an affective state and action towards the goals. 148 Determination also comprises persistence when people keep going until they get what they have been ambitious 149 for. Determination and persistence will make them win, "Nobody fails at anything until they reach the stage 150 when they finally give up." A study conducted by ??lwi et al. (2016: 43) reveals that an employee that has a 151 great enthusiasm will always do their best to enhance their skills in carrying out their duties for organizational 152 effectiveness. This implies that an individual with an intense eagerness in organizational work is most likely to 153 do good deeds (ihsan behavior), i.e., creating a more effective organization. On top of that, ??ubiantoro et al. 154 (2019: 425) states that an enthusiastic employee is characterized by working with pleasure, accomplishing tasks 155 punctually, having a dynamic interaction and optimum participation, collaborating with coworkers, and being 156 innovative. Considering the above description, it is concluded that ghirah is a strong consciousness in working 157 to achieve goals, and it is the energy to keep struggling (jihad). Ghirah is indicated by a) happiness; b) great 158 enthusiasm; c) determination; d) persistence; e) sedulity. 159

¹⁶⁰ 8 g) Patience & Persistence (Willpower)

Being patient is one of the human qualities that its virtues have been mentioned a hundred times in 90 places in the Qur'an. Patience refers to a) an ability to control oneself from badness; b) an ability to restrain from adversity/misery. Being hopeless (low willpower) may be instilled since childhood, when parents unwittingly

taught their children to be hopeless. For instance, a father did not let his children to gain new experiences or to 164 learn how to deal with obstacles. Ernadewita & Rosdialena (2019: 62-63) define patience as an ability to restrain 165 oneself from horrible things for Allah's blessing. However, being patient is not only applied to such things, viz; 166 disaster, decease, illness, hunger, and the like, but also to worldly desires. For this reason, patience is a process 167 of self-mastery from both worldly desires and unpleasant situations. Research results found by Dweck in ??toltz 168 (1997:70) prove that individuals' responses to difficulties are influenced by parents, teachers, peers, and people 169 who play an important role during their childhood. Those who address a problem with toughness, self-control, 170 and commitment will remain tenacious in confronting one (Oullette in ??toltz, 1997: 70). Moreover, Subandi 171 (2011: 225) finds out five categories included in the concept of patience, namely a) self-restraint: holding back 172 emotions and desires, thinking long, forgiving, tolerating procrastination; b) fortitude in the face of adversity; c) 173 persistence: working hard and tenaciously to reach goals and solve problems; d) sincerity and gratitude in coping 174 with harsh life truths; e) taking time (no rush). All in all, willpower (being patient and persistent) is defined 175 as one's tendency to positively respond to and bear up adversity that obstructs goal achievement. Patience and 176 persistence are measured by a) tendency to control adversity; b) acknowledging adversity and its consequences; 177 c) tendency to limit adversity; d) the length of facing adversity. 178

179 9 h) Generosity

A believer is enjoined to continue the love of Allah SWT and the Prophet by being generous with other human 180 beings, as mentioned in QS. At-Tawbah [9:128] which means: "There has certainly come to you a Messenger from 181 among yourselves. Grievous to him is what you suffer; [he is] concerned over you and to the kind and merciful 182 believers" (QS. At-Tawbah/9:128). By referring to the previous verse, the traits of the Prophet Muhammad 183 regarding generosity and philanthropy that should be exemplified encompass a) sense of crisis: an ability to 184 sense others' crisis; b) sense of achievement: having a strong desire to get other people/nation successful; c) 185 sense of love to all human beings. Growing generosity and philanthropy includes the following three qualities: 186 a. Empathy: the ability to understand other people's adversity; b. Sympathy: moral and material support to 187 lighten problems and suffering; empathy is usually followed by sympathy. c. Philanthropy: a condition of 'giving 188 not getting'. Allah SWT is The Bestower; giving is the characteristics of nature; for instance, sun, ocean, rivers, 189 and plants give benefits to humans without expecting something in return. 190

Those three qualities (empathy, sympathy, and philanthropy) should be developed to become one's inherent characters. Tabi'in (2017:39) expresses that being generous (social care) is an attitude and act of being helpful to other people in needs. Hence, it requires the ability to turn attention to the surrounding environment. According to Utami et al. In conclusion, generosity refers to the ability to understand and concern about others' feelings or problems and give them some help. Being generous is also characterized by a) empathy: sensing other people's adversity; b) sympathy: providing moral support; c) philanthropy: performing charitable acts, in terms of material support.

¹⁹⁸ 10 i) Gratitude

Gratitude, in Arabic, is rooted from 'syakarat alsyajarah' which means 'growing'. Besides, Ismail (2018:142) argues that it contains three meanings, as follows: a. Realizing that the grace comes from Allah SWT, and it is called Grateful with the Heart. b. Utilizing the grace and gift from Allah SWT the way they are intended for, and it is named Grateful with Words and Acts. c. Renewing the grace and gift from Allah SWT by growing and developing them. In this case, being grateful is the highest levels Allah SWT has instructed to The Prophet Muhammad in the first revelation of the early days of prophecy.

According to Imam Ghazali, gratitude encompasses following awareness: a. Awareness that Allah SWT gives all grace and gifts;

unconsciousness will lead to ingratitude. b. Awareness that all grace and gifts one has are greater than needed, 207 as such, getting him/her thankful to Allah SWT. c. Awareness that being grateful will make someone grow better. 208 Akmal & Masyuri (2018:20) propose the essence of gratitude, such as a) accepting the grace and gifts from 209 Allah SWT with pleasure; b) being grateful for everything Allah has given by saying Alhamdulillah (Praise be to 210 211 God); c) carrying out His commands and sharing things with other people. Furthermore, Haryanto & Kertamuda (2016:113) also give five categories of gratitude, namely accepting, thanking, enjoying, appreciating, and utilizing. 212 Accordingly, this study defines being grateful as one's behavior that is based on a) awareness and belief that 213 grace, gift, and disaster are from Allah SWT; b) awareness and belief that the grace and gift one possesses are 214

²¹⁵ huge; c) positive thinking; d) self-improvement (high productivity).

²¹⁶ **11 II.**

217 12 Research Method

The purpose of this study was twofold; it was to obtain data empirically regarding a) the correlation between eight positive qualities (ambitious, certain/ confident, hard-working, ghirah/enthusiastic, patient and persistent, generous, and grateful) and ihsan behavior, and; b) to find out the best model (Good of Fit Model) to predict ihsan behavior. This present work relied on a quantitative survey and involved 4,000 students at As Syafi'iyah Islamic University as the population; and only 215 of them were selected as the sample by random sampling. Data analysis used the multiple regression analysis with SPSS program between variable X 1 -X 8 towards variable Y. The data were collected from a nontest instrument (questionnaire) and Likert scale; the scale ranges from 1 to 5 with the following description: 5 = strongly agree, 4 = agree, 3 = neither agree nor disagree, 2 = disagree, and 1 = strongly disagree.

²²⁷ 13 a) Research Variables and Indicators

The dependent variable of this research was ihsan behavior (Y), and the independent variables comprised ambitious $(X \ 1)$, certain/confident $(X \ 2)$, courageous $(X \ 3)$; hard-working $(X \ 4)$; ghirah/enthusiastic $(X \ 5)$; patient & persistent $(X \ 6)$; generous $(X \ 7)$; and grateful $(X \ 8)$. Each variable indicator was presented in the following table. ? Being able to use information and communication technology; Ambitious $(X \ 1)$

- 232 ? Having measurable goals;
- 233 ? Possessing strong desires to achieve the goals;
- 234 ? Being persistent to achieve the goals;
- 235 ? Having continuous follow-up plans. Certain/Confident (X 2) ? Striving for the truth;
- 236 ? Mastering knowledge;
- 237 ? Thinking positively;
- 238 ? Having self-talk Courageous (X 3)
- 239 ? Willing to sacrifice for success;
- 240 ? Being generous;
- 241 ? Willing to take risks; Hard-working (X 4)
- 242 ? Producing something tirelessly;
- 243 ? Being highly disciplined;
- 244 ? Being innovative, creative, critical, and breaking out of comfort zone;
- 245 ? Doing good/being helpful more excessively;
- 246 ? Obeying prevailing religious norms and ethics Ghirah (X 5)
- 247 ? Happiness;
- 248 ? Great enthusiasm;
- 249 ? Determination;? Persistence; ? Sedulity. Patient & Persistent (X 6)
- 250 ? Tending to control adversity;
- 251 ? Acknowledging adversity and its consequences;
- 252 ? Tending to limit adversity;
- 253 ? The length of facing adversity. Generous (X 7)
- 254 ? Having empathy (sensing other people's adversity);
- 255 ? Having sympathy (providing moral support);
- 256 ? Philanthropy (performing charitable acts, in terms of material support). Grateful (X 8)
- 257 ? Having awareness and belief that grace, gift, and disaster are from Allah SWT;
- 258 ? Having awareness and belief that the grace and gift one possesses are greater than needed;
- 259 ? Thinking positively;
- 260 ? Self-improvement (having high productivity).

²⁶¹ 14 b) Instrument Validity and Reliability Tests

Testing the instrument was conducted prior to using it during the data collection process. This was to examine 262 its validity by applying the formula of r Pearson Product Moment. The formula of r Cronbach Alpha was also 263 used to test the instrument reliability. Provided below are the results of instrument validity and reliability tests. 264 implying that there is no autocorrelation because the D-W value is between -2 to 2; simply put, the regression 265 model is worth applying. All four analysis requirements mentioned above have been fulfilled, in which variable 266 Y, X 1, X 2, X 3, X 4, X 5, X 6, X 7, X 8 are normally distributed. Variable Y on X 1, X 2 X 3, X 4, X 5 267 , X 6, X 7, and X 8 has no heteroscedasticity; the tolerance value of X 1, X 2, X 3, X 4, X 5, X 6, X 7, and 268 X 8 is around 1 or the value of VIF < 10; the D-W value is between -2 to 2. 269

²⁷⁰ 15 a) Results of Correlation and Multiple Regression Analysis

271 The analysis result of the simultaneous correlation between ambitious (X 1), certain/confident (X 2), courageous 272 (X 3), hard-working (X 4), ghirah (X 5), patient & persistent (X 6), generous (X 7), and grateful (X 8) 273 and ihsan behaviour (Y) generates multiple correlation coefficient of R = 0.77. Hence, such a correlation is 274 'positive and strong'. Meanwhile, the determination coefficient (R 2) gets a value of 0.593 (rounded to 0.60) and is significant. Due to the fact that the sig value < 0.05 (0.00 < 0.05), variables of (X 1), certain/confident (X 2), 275 courageous (X 3), hard-working (X 4), ghirah (X 5), patient & persistent (X 6), generous (X 7), and grateful 276 $(X \ 8)$ simultaneously contribute to shaping ihsan behavior (Y) by 60.0%; the remaining 40.0% is contributed by 277 other factors. The overall analysis results of the multiple correlation coefficient and the determination coefficient 278 are given in the table below. The result of ANOVA regarding the simultaneous correlation between ambitious 279 (X 1), certain/confident (X 2), courageous (X 3), hard-working (X 4), ghirah (X 5), patient & persistent (X 280

6), generous (X 7), and grateful (X 8) and ihsan behavior (Y) can be seen in the following Table 5 and Table 6: Following the result of ANOVA in the above Table 5 and Table 6, the multiple linear regression model of the simultaneous correlation between ambitious (X 1), certain/confident (X 2), courageous (X 3), hard-working (X 4), ghirah (X 5), patient & persistent (X 6), generous (X 7), and grateful (X 8) and ihsan behavior (Y) can be formulated, as follows: Y = $-0.648 + 0.191 \times 1 + 0.011 \times 2 + 0.051 \times 3 - 0.064 \times 4 + 0.034 \times 5 + 0.383 \times 6$ $+ 0.460 \times 7 + 0.069 \times 8$

The significance test towards the multiple regression model $Y = -0.648 + 0.191 \times 1 + 0.011 \times 2 + 0.051 \times 3$ -0.064X 4 + 0.034 X 5 + 0.383 X 6 + 0.460 X 7 + 0.069X 8 shows a 'significant' result as the sig value < 0.05 (0.00 < 0.05) and the value of F count = 26.583 (see Table 5). Accordingly, the model mentioned previously is 'significant and applicable' to predict 'innovative behavior' by using X 1 -X 8 data, if the data of those eight independent variables are identified.

The result of significance test on regression constant (a) and regression coefficient (b, c, d, e, f, g, h, i) is presented in Table 6. The regression constant a = -0.648 is 'significant' as the sig value is <0.05 (0.041 < 0.05). This indicates that the constant gives a significant effect on doing ihsan behavior. In addition, the regression coefficient of (X 1) is b = 0.191; X 6 is g = 0.383, and; X 7 is h = 0.460. They get a 'significant' result in the regression coefficient significance test because the sig value <0.05 (0.00 < 0.05). Consequently, these three variables, i.e., ambitious (X 1), patient & persistent

²⁹⁸ 16 b) The Best Regression Model (Good of Fit Model) to

299 Predict Ihsan Behavior.

The result of regression analysis of Y (ihsan behavior) and eight independent variables, i.e., ambitious (X 1 300 , certain/confident (X 2), courageous (X 3), hard-working (X 4), ghirah (X 5), patient & persistent (X 6), 301 302 generous (X 7), and grateful (X 8) and ihsan behavior (Y) formulates the regression model, as follows: Y=-0.648+ 0.191X 1 + 0.011X 2 + 0.051 X 3 - 0.064X 4 + 0.034 X 5 + 0.383X 6 + 0.460X 7 + 0.069X 8 behavior (Y) by 303 using three dependent variables with significant regression coefficients (sig. value < 0.05) as predictors. Those 304 are ambitious (X 1), patient & persistent (X 2), and generous (X 3). Provided in the table below is the result 305 of correlation and regression analysis for 'good of fit model' to shape 'ihsan qualities'. The multiple correlation 306 analysis of the simultaneous correlation between ambitious (X 1), patient & persistent (X 2), and generous (X 307 3) and ihsan behavior (Y) results in multiple correlation coefficient R = 0.765; such a correlation is 'positive and 308 strong'. Next, the determination coefficient (R 2) gets a value of 0.585, implying that variables of ambitious (X 309 1), patient & persistent (X 2), and generous (X 3) simultaneously[©] 2021 Global Journals Volume XXI Issue V 310 Version I 8 (G) 311

312 Global Journal of Human Social Science -Year 2021

Strengthening Ihsan Behavior (Always do the Good Deeds) a. Predictors: (Constant), Ambitious, Patient & Persistent, Generous b. Dependent Variable: Ihsan Behavior (X 6), and generous (X 7) significantly influence the level of performing ihsan behavior. Meanwhile, the regression coefficient of X 2 is c = 0.011; X 3 is d = 0.051, and; X 4 is e = -0.064, X 5 is f = 0.034, and X 8 is i = 0.069. They get an insignificant result (see Table 6) in the regression coefficient significance test because the sig value > 0.05 (0.877, 0.452, 0.474, 0.625, and 0.278 > 0.05). Therefore, the variables of certain/confident (X 2), courageous (X 3), hard-working (X 4), ghirah (X 5), and grateful (X 8) do not significantly affect the level of ihsan behavior.

It appears that five variables get insignificant regression coefficients (see Table 6), including certain/confident 320 321 (X 2), courageous (X 3), hard-working (X 4), ghirah (X 5), and grateful (X 8), in which the sig. value 322 is greater than 0.05. As a result, the model is "inadequate", meaning that an acceptable model (good of fit model) should be determined to predict Ihsan contribute to ihsan behavior (Y) by 58.5%; the remaining 41.5% 323 is contributed by other factors. The analysis result of the regression of Y on X 1, X 2, and X 3 is illustrated 324 in the following Table 8 and Table 9. Based on the result of ANOVA, as shown in the above tables, a multiple 325 linear regression model of the simultaneous correlation between ambitious (X 1), patient & persistent (X 2), 326 and generous (X 3) and ihsan behavior can be formulated as the Good of Fit Model, as follows: Y = -0.465 +327 $0.211 \ge 1 + 0.413 \ge 2 + 0.453 \ge 3$. 328

The significance test towards the multiple regression model $Y = -0.465 + 0.211 \times 1 + 0.413 \times 2 + 0.453 \times 3$ shows a 'significant' result as the sig. value < 0.05 (0.00 < 0.05) and the value of F count = 70.927 (see Table 8). Accordingly, the model mentioned previously is 'significant and exigent' to predict 'innovative behavior' by using X 1, X 2, and X 3 data, if the data of those three independent variables are known.

333 The result of significance test on regression constant (a) and regression coefficient presented in Table 9 is a 334 = -0.465 and 'significant' as the sig. value is < 0.05 (0.00 < 0.05). Thus, the constant has a significant effect on 335 doing ihsan behavior. In addition, the regression coefficient of X 1 is b = 0.211; X 2 is c = 0.413, and; X 3 is d = 0.211; X 2 is c = 0.413, and; X 3 is d = 0.211; X 2 is c = 0.413, and; X 3 is d = 0.211; X 2 is c = 0.413. 0.433. They get a 'significant' result in the regression coefficient significance test because the sig. value < 0.05336 (0.00 < 0.05). As a consequence, these three variables, i.e., ambitious (X 1), patient & persistent (X 2), and 337 generous (X 3), significantly influence the level of performing ihsan behavior. They feature a level of sensitivity 338 of the great effect on ihsan behavior, in which the highest sensitivity achieved by generous = 0.453, and followed 339 by both patient & persistent = 0.413 and ambitious = 0.211. 340

341 **I7 IV.**

342 18 Discussion

The instruction of doing ihsân is clearly written in QS. An-Nisa ??4:36], as follows: "Worship Allah and associate 343 nothing with Him. And do goods to parents, relatives, orphans, the needy, the near neighbors, the distant 344 345 neighbors, the companion at your side, the travelers, and those whom your right hands possess. Indeed, Allah does not like the self-deluding and the boastful". (QS. An-Nisa/4: 36). The behavior of ihsân, as mentioned 346 in the verse, is the second-highest virtue in Islam after the belief in Allah (tawhid) as the first. Those who 347 can do good to others (ihsân) are called muhsin/mushinîn. In the Qur'an, no less than 15 times, Allah SWT 348 relies His love on people who do and behave ihsan, as in this verse: "...And those who restrain anger and forgive 349 people [mistake]. Allah loves the doers of good." (QS. Ali 'Imran/3: 134). According to Hazii (2020) that 350 the implementation of Ihsan's behavior in an institution/organization/company in general for three, namely: 351 a) Organization Ihsan Behavior-Employee toward Employee (ihsan behavior between colleagues/ employee to 352 employee); b) Organization Ihsan Behavior-Employee toward Organization (Ihsan behavior between employee to 353 354 supervisor/head of work unit) and c) Organization Ihsan Behavior-Organization toward Employee (ihsan behavior 355 between the organization leadership to the employee), and if applying the three In the Qur'an, faith and righteous deeds are always mentioned together; they are inextricably linked with each other. Generosity is an essential part 356 357 of righteous deeds that should be shown as evidence of faith. The Prophet Muhammad, in a hadith, explains 358 that Muslims should care about each other, as narrated in Shahih Imam Thabrani which means: 'Whosoever of you do not care about the Muslims is not one of them. (Shahih Imam Thabrani Number 74730.) Further-more 359 according to ?? ollett & Morrissey (2007: 21) generosity is a character in which a person voluntarily gives his or 360 her time, talents and possessions to help others, and is a mandatory and voluntary behavior oriented towards 361 providing welfare to others. Generosity is a manifestation of the love of Allah and Prophet Muhammad. As 362 widely acknowledged, Allah SWT is The Most Gracious, The Most Merciful. Further, the Prophet Muhammad 363 364 is compassionate and merciful. Muslims are asked to continue the love of Allah and the Prophet Muhammad to human beings by doing good deeds (ihsân) and being generous. Narrated in a hadith, Allah SWT will help a 365 person who also helps his brother. The Prophet Muhammad said: 'Allah is always helping the servant as long 366 as the servant is helping his brother' [Shahih Muslim, Thurmudy, Abud Daud, Ibn Majah, and Ahmad]; Imam 367 al-Albani viewed this hadith to be authentic. 368

The second dominant quality that contributes to ihsan behavior is patient & persistent in striving for and 369 helping others. Ihsân behavior requires patience and persistence as one should resist indolence, miserliness, and 370 371 selfishness to behave well. Patience, in this case, refers to being patient to accept difficulties, to fulfill obligations, i.e., helping other individuals, and to resist worldly desires and selfishness. Persistence is also important on 372 373 account of the necessity of making a considerable effort to perform good deeds (ihsân). One with no patience and 374 persistence in patience is not able to develop ihsân behavior as the highest religious behavior. Allah says in QS. 375 Ali 'Imran ??3:200]: "Believers, endure and be more patient and hold yourselves ready (on the border of your territory) and be pious to Allah that you may find success" (QS. Ali 'Imran/3: 200). Patience, as mentioned in 376 377 the aforementioned verse, is required to gain the highest religious degree, and success. Ihsân behavior should be striven for the whole life, meaning that developing ihsân behavior takes a great deal of effort and time. For such 378 reasons, patience and persistence are determinant factors of shaping ihsân behavior. Further-more according to 379 Subandi (2011:220) it is mentioned that there are two kinds of ways to train patience, namely: a) realize that 380 everything in this world is not eternal and changes all the time, what is unpleasant is not always disturbing; b) 381 think that everything that happens to a person is the result of his own actions. 382

383 The third dominant quality determining ihsan behavior is ambitious in views of the vision of people's 384 betterment and prosperity. According to ??arsukova (2016: 80) in general the goal of a person has ambition is to gain recognition of what he wants from others his social environment as well as his professional community. In 385 this case in Islam and Muslims betterment has become the fundamental and supporting aspect of ihsân behavior 386 development. Unambitious or narrow-minded people will be more likely to work and do something for their own 387 improvement. Simply put, without understanding the vision mentioned previously, it takes a lot of energy to 388 urge someone to behave ihsân. The behavior of ihsân is interpreted as a willingness to share with and help other 389 people towards the best Islamic community (ummah), as Allah says in QS. Ali 'Imran ??3:110]: "You are the 390 best people raised up for mankind, enjoining what is right, forbidding what is wrong, and believing in Allah. If 391 only the People of the Book had faith, it would indeed have been better for them, some of them are believers, 392 but most are transgressors". (QS. Ali 'Imran/3: 110). The above verse depicts a big vision of becoming the best 393 394 community (ummah), i.e., human beings that can perform three acts of goodness as the component of ihsân, 395 as follows: a) humanization: a matter of promoting human dignity; b) liberation: setting people free from the 396 spiritual disease of the heart; 3) spiritualization: encouraging humans to acknowledge and believe in Allah to 397 enlighten the heart and mind.

Being generous, patient & persistent, and ambitious are three dominant qualities that influence ihsan behavior. Other qualities include certain/confident, courageous, hard-working, ghirah, and grateful. All these qualities simultaneously and positively contribute to shaping ihsan behavior by 60%; the remaining 40% is influenced by other factors, such as education, experience, family, school, and society. An individual educated and raised in a family, school, and community environment that has a decent Islamic background will tend to have a strong ihsân

behavior. On top of that, ihsân behavior is also affected by values and cultures prevailing in societal life. People 403 with high cooperative, collective, and collegial values will have the chance to grow and develop the behavior of 404 ihsân (always do the good deeds). to predict the level of ihsan behavior by using the variables of ambitious, 405 patient & persistent, and generous is $Y = -0.465 + 0.211 \times 1 + 0.413 \times 2 + 0.453 \times 3$. The negative sign in the 406 constant: -0.465 brings out the fact that the absence of ambitious $(X \ 1 = 0)$, patient & persistent $(X \ 2 = 0)$, and 407 generous $(X \ 3 = 0)$ qualities will lead to negative or decreasing ihsan behavior (-0.465). h. The sequence of the 408 sensitivity level of the effect of ambitious, patient & persistent, and generous qualities on shaping ihsan behavior 409 (always do the good deeds) is given below. d. By taking into account the regression coefficient, only ambitious 410 (X 1), patient & persistent (X 6), and generous (X 7) in the model of Y = -0.648 + 0.191 X 1 + 0.011 X 411 2 + 0.051 X 3 -0.064X 4 + 0.034 X 5 + 0.383 X 6 + 0.460 X 7 + 0.069X 8 that significantly and dominantly 412 influence the development of ihsan behavior. In contrast, the other five qualities: certain (X 2), courageous (X 413 3), hard-working (X 4), ghirah (X 5), and grateful (X 8) do not have a significant effect. 414

415 **19** V.

416 20 Conclusions

⁴¹⁷ Finally, the best model (good of fit model) to predict 'ihsan behavior' uses ambitious, patient & persistent, and generous as variables with a significant or dominant effect.
