Hegemony of Women A Myth or Pragmatic Reality Dr. Sribas Goswami¹ ¹ SERAMPORE COLLEGE *Received: 12 December 2012 Accepted: 4 January 2013 Published: 15 January 2013*

6 Abstract

Analysis of the status of women in self help group depends on an understanding of gender 7 relations in a specific context. Examining gender relations as power relations makes clear that 8 these are sustained by the institutions within which gender relations occur. For women in 9 rural area, absence of power results in the lack of access to and control over resources, coercive 10 gender division of labour, devaluation of their work, and a lack of control over their own 11 labour and mobility. Here the study tries to show the real position of women working in Self 12 Help Groups in surrounding places of Raniganj coal field. An attempt has been made to see 13 the access and control over private assets and resources, access to public resources, control 14 over their labour and income, control over their bodies control over physical mobility. The 15 entry of women into political spaces has the potential to reorder gender power relations in the 16 public arena. Women's access to knowledge, information and skills have to be made central 17 not just to promote their 'participation in development, but so that they become tools to 18 challenge subordination. Moreover, sustainable changes require women's entry not only to 19 formal economic spaces but also community-level spaces, which means eliminating obstacles 20 that impede their effective participation. In order to make the rural women more effective in 21 decision making process unnecessary interference in their matter need to be minimized. 22 Empowerment of women, requiring conditions that enable women to exercise their autonomy; 23 it also envisages a process of self-empowerment, in which women begin to re-examine their 24 lives critically and collectively. While the former involves the facilitation of women's access to 25 and control over resources, the latter emphasizes women's agency in seeking greater access and 26 control. There is a need to support of capacity building initiatives by highlighting women 27 entrepreneurs? successes and profiling role models. All SHG?s 28

 poverty alleviation, entrepreneurship

32 1 Introduction

omen being half the world populations contribute enormously in economic development of any nation, yet unequal 33 34 access to control on resources by men and women are serious hampering the process of gender equalization in 35 nearly every part of the country. The situation in rural areas is worst where women, in large numbers, participate 36 in economic activities in informal and Author : Assistant Professor in Sociology, Serampore College, W.B, India. E-mail : sribasgoswami@rediffmail.com unorganized sector. Present paper is an attempt to reveal the actual 37 situation of women as entrepreneurs in the form of self-help group in surrounding villages of Raniganj where 38 the coalmines are domain industries. Most of the areas find it extremely difficult to inculcate entrepreneurial 39 qualities and skills among women to develop them as entrepreneurs. Socio-cultural values and attitudes are some 40 of the factors attached with women entrepreneurs that create hindrances in promoting entrepreneurial inclinations 41

²⁹

42 among them. In many places, women are dependent upon others for these basic human requirements. By actively 43 promoting economic empowerment of women, governments not only support economic growth, but intellectual 44 and social progress. Economic empowerment of women changes the balance of power because it allows half the 45 world's population to contemplate higher goals than basic survival. In most SGHs there is little attempt to link 46 micro-finance with wider social and political activity. This paper puts forward how self-help groups have received 47 extensive recognition as a strategy for economic empowerment of women.

In Raniganj surroundings we have several categories of Women entrepreneurs. Like women in organized & unorganized sector, women in traditional & modern industries, women in suburban & rural areas, women in large scale and small scale industries, single women and joint venture. But for present context only the SGHs leaders are taken as entrepreneurs.

The Government of India had formally influenced by the Platform of Action adopted by the Fourth World 52 Conference on Women at Beijing in 1995, identified the eradication of the persistent and increasing burden 53 of poverty on women emphasizing the importance of strengthening women's access to credit and capital on 54 appropriate terms equal to those of men requiring special attention and action by the international community, 55 governments and civil society. To alleviate poverty the major efforts taken in India was to launch Swarnajayanthi 56 57 Gram Swarojgar Yojana (SGSY) by the socio-economic development of rural people, especially, of women, those 58 who are deprived from the benefit of the mainstream of society. Swarna Jayanthi Gram Swarozgar Yojana Scheme 59 (SGSY), the amended and merged version of the erstwhile Development of Women and Children in Rural Areas (DWCRA), Integrated Rural Development program (IRDP) and Training of Rural Youth for Self Employment 60 (TRYSEM) etc. was launched in April 1999, emphasizing the development of the rural people who belonged to 61 below poverty line. Main goal of this programme was to make group oriented entrepreneurial income generating 62 activities through the formation of Self Help Groups (SHG). It is a holistic credit-cum-subsidy program, covering 63 all aspects of self-employment to alleviate poverty. 64

India has won global recognition for innovation of the idea of micro-credit under SGSY. SGSY is being 65 implemented through the District Rural Development Agencies (DRDAs) with active involvement of Panchayeti 66 Raj Institution, banks and NGOs. It is financed on 75:25 cost sharing basis between the centre and states. Since 67 the inception of the programme 22.52 lakh, SHGs have been formed covering 66.97 lakh Swarojgaris. During 68 2006-2007 the Central allocation for the scheme was 1200 crore which was an increased amount of Rs. 200 crore 69 of the budget years, 2005-2006. Emphasis has been laid on different components such as capacity building of the 70 71 poor, training on skill development; credit disbursing, marketing and infrastructure. The subsidy allowed under SGSY is 30% of the total project cost, subject to the ceiling of Rs. 7500. For SHGs subsidy would be 50% of the 72 project cost subject to a ceiling of Rs. 1.25 lakh per capita subsidy Rs. 10,000, whichever is less. The SGSY has 73 a special focus on the vulnerable groups among the rural poor. Women account for at least 40% swarojgaris. The 74 SGSY seeks to promote multiple credits rather than a onetime credit injection. (Source: Ministry of Information 75 and Broadcasting, Govt. of India, 2008). 76

Poverty is multi-dimensional. It is a violation of human rights to education, health and nutrition, adequate 77 housing, a safe and healthy living environment, social security, employment and development. So, it covers all 78 ranges of socio-economic aspects. Poverty hits hardest mainly at the female as half of humankind. In the world, 79 70% women are belonging to extensive poverty (Source: Human Development Report for Asia and International 80 Labour ??rganisation, 2000). Woman living at rural areas of a developing country are poor, more vulnerable, 81 having no land, less educated, in non-availability of gainful employment, in poorer knowledge, and in poorer 82 health and nutrition. Discrimination in education is the beginner of the vicious spiral of poverty. Due to less 83 education they don't get any employment opportunity, which accelerates poverty in cash economy. To overcome 84 poverty, making credit available to low-income women is one of the most effective ways of raising their standard 85 of living and increasing their opportunities for advancement. But with little income or collateral, these poor 86 people are seldom able to obtain loans from banks and other formal financial institutions. Easy access to credit 87 by women has been a major constraint. Micro credit through SHG gives them a platform to climb out of poverty. 88 It is a solution to help them by extending their horizon and offers them social recognition and empowerment 89 which is essential for the well being of their families, and in turn, their communities. Also, women across cultures 90 and take primary responsibility for nourishing children; they are the children's first and most important teachers. 91 Knowledge given to women is likely to pass on to future generations, multiplying opportunities for their children 92 93 and grandchildren.

Underlying philosophy of providing Credit under SGSY through the self help group approach is to help the 94 poor women in these ways: -? Providing easy access to credit without any collateral security, ? providing 95 independent sources of income at homely atmosphere through engagement in micro entrepreneurial activities 96 utilizing the credit, ? providing substitute of informal credit, ? assisting them to meet emergency needs and 97 98 demands, ? encouraging to take risk of loan and other socioeconomic activities by the group support, ? reducing economic dependency of the women and thus enhance autonomy, ? by the exposure to new sets of ideas, values 99 and social supports through market linkages, trainings, seminars and meetings, ? making these women more 100 assertive of their rights by increasing their knowledge and awareness level, ? providing control over material 101 resources -should raise women's prestige and status in the eyes of community and thereby promote participation 102 in decision making in every sphere of survival, ? encouraging them to take leading role in political and other 103 community activities, ? empowering them economically, politically and socially in order to alleviate poverty. 104

The credit is only accessible for rural women through the formation of Self Help Group under the programme of SGSY. Self-Help Group (SHG) is a small voluntary association of poor people, preferably from the same socioeconomic background. They come together for the purpose of solving their common problems through self-help

and mutual co-operation. The SHG promotes small savings among its members. The savings are kept in a bank.

This common fund is in the name of the SHG. Usually, the number of members in one SHG does not exceed more than twenty. The uniqueness of these groups lies in the fact that to a large extent they are self-supporting,

 $_{111}$ $\,$ self-governing organizations free from bureaucratization and politicization.

Credit through formation and promotion of SHG under SGSY is an effective intervention strategy for poverty alleviation at healthy, choosy and homely environment which is easily accessible to the rural poor

¹¹⁴ 2 Method of Study

This research paper is mainly based on primary data, which has been collected from 5 main samples (head of each group) on the basis of interview schedule from 5 different villages namely Bansra, Ikra, Topsi, Searsole and Bijpur in Burdwan District of West Bengal, India during 2013. Every member of the groups are taken as samples. Purposive sampling has been used to choose the samples. However secondary sources are also used for data collection.

¹²⁰ 3 a) Constrains of Women Entrepreneurs in Shgs in

121 These Villages

- 122 ? Dual role to play at workplace & at home place.
- 123 ? Subordinate to men.
- 124 ? Just that her being women.
- 25 ? Non-awareness of facilities provided by government.
- 126 ? Competition with large-scale units.

127 ? Problems related to marketing.

228 ? Exploitative conditions -middlemen eating away the profit.

¹²⁹ 4 b) Following Factors Identified in Different Villages of Women ¹³⁰ to Take-Up Employments

From the field situation it is realized that major reasons to take-up jobs by the women are sudden fall in family income, permanent inadequacy in income of the family, their desire to evaluate their talent, to utilize their free time or education, need and perception of their Liberation and Equity etc, to gain recognition, importance and social status and lastly to get economic independence.

In the surrounding villages of Raniganj coalfield many self-help groups have formed. They are engaged in several productive jobs. Here five groups are taken for data collection from five villages. c) Nature of Job Performed by the Members of Five Different Shgs

138 ? Fishnet weaving and fishing.

139 ? Wood craft ? Bamboo craft ? Mat making ? Sewing (Cloth stitching) and embroidery.

In the eighties, the emphasis shifted to enabling women to become active agents of their empowerment. The 140 vision of development broadened to include physical, moral, intellectual and cultural growth of every individual. 141 This necessitated, as well as, established the vital link between the development of society and the advancement 142 of women. These are two inseparable sides of a coin. However instead of homogeneity, there are multiplicity of 143 strategies for change, which are specific to the needs of women, belonging to different sections of a given society, 144 region or nation. Basic to this concept is the creation of individual as well as collective self-reliance. It is felt 145 mere economic empowerment would be insufficient, unless accompanied by the social power of agency over the 146 spending of that money and over other facets of one's life. The self-help groups are fruitful in this regard. The 147 capacity to earn one's livelihood and the resultant selfconfidence was necessarily the first step in the ladder to 148 empowerment. The grassroots movements initiated by women in India in the latter half of the 20 th century were 149 economic, social, political or cultural in their content, depending on the section of society to which the women 150 belonged and their specific needs. In true sense in early time of independence the women in this area used to 151 perform their routine indoor jobs but now they have started working for their upliftment however biased they 152 are. By forming SHGs many poor women are getting economical support. Few of them contribute a major part 153 of their family expenses, as their husbands don't work regularly. This paper puts forward how micro finance 154 has received extensive recognition as a strategy for economic empowerment of women. This paper also seeks to 155 156 examine the impact of Micro finance with respect to poverty alleviation and socioeconomic empowerment of rural 157 women in general and surrounding villages of Raniganj coalfield in specific. An effort is also made to suggest the ways to increase women empowerment through entrepreneurship. Empowerment is a multi-dimensional social 158 process that helps people to gain control over their own lives communities and in their society, by acting on issues 159 that they define as important. Empowerment occurs within sociological, psychological, economic, spheres and 160 at various levels, such as individual, group and community and challenges our assumptions about status quo, 161 asymmetrical power relationship and social dynamics. Hegemony of woman as an entrepreneur puts the spotlight 162

4 B) FOLLOWING FACTORS IDENTIFIED IN DIFFERENT VILLAGES OF WOMEN TO TAKE-UP EMPLOYMENTS

on decision-making and freedom of potential thinking, which are essential elements to sustainable development of entrepreneurship in selfhelp groups.

The self-help groups in this area are not very much familiar with the people. Due to alternative sources of 165 income the existence of self-help group is very rare in these areas. All five groups taken as sample are consisting of 166 10 to 12 members including their leader. Women entrepreneurs who are working with self help groups have taken 167 positive steps however small it is towards women empowerment. The general awareness level is not standard 168 among the women entrepreneurs and need adequate training for their development of skills to get better output. 169 From the study it is clear that the women from all five villages belong to destitute class and economically lagging 170 from the mainstream of society. They are compelled by their familial situation for giving financial support to 171 their family. On the other hand government's attitude is not remarkable and not much attentive for women 172 empowerment. In these groups one head women use to exercise the power over other and theses leaders enjoy 173 comparatively better privilege than others. The major decisions are being taken by the male from behind the 174 curtain. Chief Lady of every group collects very small amount from each member to keep the money in bank 175 and take loan according to their requirement out of their savings. Banks use to provide inadequate loan to open 176 a trade to these groups. The character of work belonged to the traditional model of woman's work. This was 177 a double-edged sword since it reinforced the traditional role of women working from their home, with kitchen 178 179 as the center of operations. Public acceptance of social groups products is lower than branded produce flooding 180 in the market. In the opinion of leaders of SHGs many-branded produce not qualitatively superior, some are 181 duplicated. Social group members feel that they maintain reasonable prices. They think of poor consumer and keep very low margins. Despite their sincerity there is low acceptance in local market and people not enthusiastic 182 while purchasing SHGs produce. 183

During fieldwork it is observed that women are interfered in all deferent cases by their male surroundings. Even 184 it was felt that leaders of these selfhelp groups were not sufficiently free to express their spontaneous opinions 185 during interrogation. Another remarkable aspect is found that all women leaders belong to comparatively higher 186 strata of the society than other members of the group. Education level is not up to the mark among the women 187 entrepreneurs. It is common belief among the women entrepreneurs in this region that if they hold such type 188 of position (Leader in SHG) it would benefit them in holding a social status. Women leaders confessed during 189 interrogation that they are much closer to the Panchayet management. These groups are to some extant politically 190 biased. From prima facie it seems that they formed these groups to get political mileage rather to get economical 191 support. The empowerment of women may be multidimensional but fruit of development is getting very few of 192 them. Especially the decision making process is largely controlled by male domains. In this regard the primary 193 194 need is a spontaneous grassroots movement by women that, however small in its origin, is capable of selfsustaining and self-propelling growth. Moreover, it was important that these women belong to the disadvantaged section of 195 the society, so that the driving force comes not from above, but from below. 196

Based on participatory principles to build up incremental knowledge of SHGs and enable women entrepreneurs 197 to develop their strategies for change ?? Chen, 1996). Economic empowerment of women entrepreneurs are 198 however defined in more than individualist terms to include issues such as property rights, changes intra-household 199 relations and transformation of the macro-economic context as it is observed during fieldwork. Micro Finance is 200 emerging as a powerful instrument for poverty alleviation in the new economy. In these villages, micro finance 201 scene is dominated by Self Help Groups (SHGs) -Bank Linkage Programme, aimed at providing a cost effective 202 mechanism for providing financial services to the "un reached poor". Based on the philosophy of peer pressure 203 and group savings as collateral substitute, the SHGs have been successful not only in meeting peculiar needs of 204 the rural poor women, but also in strengthening collective self-help capacities of the poor women at the local level, 205 leading to their empowerment. Although in some contexts women entrepreneurs may be seeking to increase their 206 influence within joint decision-making processes rather than independent control over income ??Kabeer 1998), 207 neither of these outcomes can be assumed. Women's perceptions of value and self-worth are not necessarily 208 translated into actual well-being benefits or change in gender relations in the household (Sen 1990, Kandiyoti 209 1999). But in true sense the hegemony of women entrepreneurs of these SHGs doesn't actually exist. 210

With proper guidance, encouragement and financial support, the self-help groups can improve their situation 211 in this region. If some training facility is provided for skill-based livelihoods related to wooden carpentry work, 212 bamboo handicraft work, food processing, and paper work then that could help them to upgrade their skills and 213 produce quality items. Cottage industries and handicrafts need encouragement at all levels. As they said that 214 no formal training has been given yet to upgrade their skills. Government has to focus its attention adequately 215 to improve the situation of rural women in this industrial belt. In fact Government is giving its attention to 216 the industrial development of Raniganj and its surroundings but theses micro level SGHs are neglected in rural 217 sector. Theoretical framework for the promotion of SHGs is adequately given but implementation doesn't seem 218 to be successful in these areas. But through Micro-finance if such type of self-help groups is formed the rural 219 industry can create a boom in economic development of women as well as the villages. 220

Training should be provided to increase the quality of items produced such as incense sticks and also for attractive packaging. Regular training centers for SHGs are required to be built at the Block level.

The study shows that there are a huge variety of handiwork-related activities in different locations, which act as major sources of livelihoods for the poor and the disadvantaged households. Such types of handi-work relate to non-farm activities, off -farm activities and onfarm activities including agro-processing activities etc. With fall

in agricultural returns/productivity and high risk the role played by handiwork as sources of gainful employment 226 for the poor women and the disadvantaged is crucial and holds great promise as pathway out of poverty. Hence 227 work shed -plus initiative is being recommended. SHGs should be linked up with other development programmes. 228 There should be discussion amongst local people for starting more self-help groups and the cooperative should 229 be made active. The SHG members suggested that the advertisement is urgently needed for convincing the 230 231 authenticity of the produce. Advertisement is an expensive affair and there are no funds meant for this activity. If the government supports advertisement by wall writing/painting, television, radio, it will enhance the market. 232 The emphasis obviously is on earning one's bread through daily work, all through one's life. Rather a hard 233 decision, but given the circumstances of its origin, it reflects the philosophy as well as the hard-core reality of life 234 of its members. 235

²³⁶ 5 d) Process of accessing credit through group formation and ²³⁷ promotion

Women from homogeneous class form the group in an integrative and cohesive manner. At first stage, they 238 give the name of the group and elect one president, one secretary, and one treasurer from group members. All 239 these groups in this block have been formed around 10 members. All are formed and promoted by local Gram 240 Panchayet initiation. These SHGs are formed by the deposited amount of each member of Rs. 30 per month and 241 loan is given from the group at 2% rate of interest. After 6 months group opens an account in the bank in the 242 name of self and then time-to-time credit process through bank is going by maintenance of banking rules and 243 regulations and by proper evaluation of group members' entrepreneurial economic performances. There is a bank 244 linkage programme established to SHGs on commercial basis. These SHG members opened their accounts at 245 different commercial banks. Members of SHGs are getting loans under the security of SHG. Each SHG get loan 246 of Rs.25, 000 as first dose. But, the striking is that uniformity is not maintained by the bank to lend the amount 247 of credit at the 2 nd dose and the gap between the two doses. It is observed that the amount of credit varies 248 from minimum Rs.60,000 to maximum Rs.1,00,000 as 2 nd dose loan and the gap between the two installments 249 of lending the credit is becoming one, two, three or four years. In recovery of loan, they get subsidy from District 250 Rural Development Cell (DRDC) from minimum Rs. 5000 to maximum Rs. 15,000 according to the basis of 251 their amount of loan and overall performances. Regarding their loan repayment status, results are appreciative 252 by their regular interest payment. For successful promotion of the groups different training programmes are 253 organized from Block Development Office (BDO), District Rural Development Cell (DRDC), NGOs and different 254 welfare organizations. These groups get the opportunity to exhibit and advertise their products through different 255 seminars, fairs. BDO and DRDC visit and evaluate the groups' performances periodically in order to help and 256 encourage the successful performances of group members. 257

²⁵⁸ 6 e) Building of Economic Enterprise

Women in economic entrepreneurial efforts utilizing the credit are vital factors in developing their indigenous inherent productive capacity. They are involved at production of domestic goods like animal husbandry, making spices, paper bags, cloths and garments, agriculture, small business of vegetables, grocery, fast food etc. They have started their efforts at their homely atmosphere linking with easy to handle low cost appropriate technology application, utilizing of low cost natural resources and raw materials available in their local environment with an assured linkages to obtain a justifiable price for their products. Besides it is advantageous for them that they get help and support in production from other family members without wages which decrease their production cost.

²⁶⁶ 7 f) Getting Additional Employment

In rural areas women don't get opportunity to educate them properly due to early marriage, social constraints, 267 willingness to prepare them for household services and overall poverty. So, they remain at far away from 268 employment opportunities. But the credit through SHG formation and promotion provides the platform of 269 270 social recognition. They now are participating at different village level awareness and welfare campaign like, literacy, polio awareness, other health awareness for pregnant mother and new born child, sanitary distribution, 271 making cleanliness in feeding and other services at household etc., promoting by State, Central Govt. and other 272 national and international voluntary agencies by some consolidated remuneration. The SHG approach offers to 273 involve at earning activities like mid day meal cooking at schools, motivating women to form SHG and other 274 awareness generating programmes initiated by panchayet and other voluntary agencies. 275

²⁷⁶ 8 g) Self Dependency

Traditionally women were not any kind of asset owner. Their assets were mediated by parents, husband, children and other related members. They have to perform services for the nurturing, care and betterment of family members. So they have no material assets. But the credit facility gives them opportunity to make some property and assets in their own name and right to handling of all economic affairs related to credit oriented business activities. So, they now claim that these material assets are their own creation and always want to improve their own creations by earning activities. So they now self dependent due to their personal income in cash economy. They have not to be dependent on other family members to meet own needs and desires.

²⁸⁴ 9 h) Removing from exploitation of Informal Sources of Credit

Women, lacking in social position and legal rights and traditionally earning less than men, are particularly 285 286 vulnerable. A lack of collateral and an ability to borrow only small amounts at a time render women ineligible 287 for loans from major national and private banks. In desperation to get out of poverty and to get little opportunity 288 they turn to village "Mahajans" (unofficial money lenders), who offer loans at exorbitant interest rates. Even if they receive such loans, people with low levels of literacy, skills, and knowledge run a high risk of failing at their 289 business and defaulting on their loans. They often lose the collateral they provided, which might be, for example, 290 any utensils of precious metal, the jewelry etc. pushing them deeper into poverty. In this context, micro-credit 291 has allowed women to overcome these obstacles and improve their lives. i) Linkage with the Banking Institution 292 Traditionally women are far away from any banking transaction due to lack of any assets and awareness of 293 themselves. As soon as the SHG is formed and a couple of group meetings are held, an SHG must open a 294 295 Savings Bank account with the nearest Commercial or Regional Rural Bank or a Cooperative Bank. This is 296 essential to keep the thrift and other sums of money of the SHG safely and also to improve the transparency levels of SHG's transactions. Opening of SB account, in fact, is the beginning of relationship between the bank 297 and the SHG. Because the credit process with the group is only maintained through bank under SGSY. They 298 make all transactions to the bank collectively in the name of the group. Later individual women have started 299 300 to open an account in self name in the goal of saving money. This opportunity inculcates the saving habits and makes knowledge about monetary transaction among them. j) Linkage With the Markets Markets were 301 mostly taboo area of women. They don't have any market experience individually. In any market linkages men 302 were their passive partners, because it was recognized that women are kept aside from any public transaction 303 due to age old identity of women as protective entity. But now their engagements in business activities make 304 themselves of targeting their business more profitable, so they have to establish the link with the markets to gain 305 knowledge about recent products and price. This linkage improves their bargaining power in transaction of price 306 and exchanging of products. It also provides more exposure and mobility by communicating with persons of 307 different nature, character and opinions, sharing their ideas, opinions, constraints and problems. This interaction 308 in turn diminishes poverty of knowledge among women. 309

³¹⁰ 10 k) Participating at Different Village and Community Ser-³¹¹ vices

vices

Women members in the group participate actively in different village and community services escaping from the 312 private domain of the home. They directly have participated at literacy campaign, standing against violence faced 313 by any women in the family, distribution of sanitary in the rural family and giving a lesson about the maintenance 314 of health and hygiene, the companionship to provide health services of pregnant mother and new born child by 315 govt. health centers, solving households' internal conflict and clash among members in family, forming Mahila 316 Samiti for their open discussion on any matters, standing at Panchayet election, creating awareness among women 317 in order to receive proper rights and privileges from the society, ifferent community and village level meetings 318 etc. 319

³²⁰ 11 l) Networking

The networking is vital in women poverty alleviation process as it provides the windows for facilitating access the 321 322 data and information about the ongoing activities related to market, technology implementation and procurement of raw materials, service providers, price fixing and sustainability of all the other related activities enhancing their 323 efforts in achieving profits in production. Hence networking within the group of women is very important in taking 324 risk of developing women collective and individual enterprises and also provides the relief from mental agony, 325 sorrow by common sharings. Also networking with outside the group members like panchayet members, bank 326 officials, block and district officials make them knowledge about group's successful dynamics and the surrounding 327 socio-economic reality. 328

A conclusion that emerges from this account is that micro finance by forming SGHs can contribute to solving 329 the problems of inadequate income of women and rural services as an integral part of poverty m) Meeting 330 of Day-To-Day Household Needs and Demands Income is the major determinant of the standard of living of 331 the people. Now women have started to earn money after joining the SHGs. Hence women members of the 332 333 groups are independent to meet their personal expenditures, and they contribute their income at their household 334 budgets. Many women members independently involve in the economic activities like production of domestic 335 goods, which have the necessity to meet required household day to day needs and demands. So their economic 336 involvement meets required enterprise needs and also household needs. Their contribution to the family budgets make prestigious to themselves and family. n) Fulfillment of Emergency Needs Earlier, women meet their urgent 337 needs by lending the credit from informal sources with exorbitant rate of interest. But, now access to credit 338 through SHG gives relief from exploitation of these sources and makes saving habits through banking transaction 339

among women. This habit protects them from sudden emergent emergency crises. Besides, the group support in this stage by providing credit at reasonable rate of interest. They may overcome easily these crises by the successful promotion of the group which works as survivor of themselves.

³⁴³ 12 o) Increasing Awareness Level

Women participating in this group through collective activities are aware of their rights and privileges. Their 344 mobility and networking make them aware about their socio-economic reality. They now claim their rights 345 and privileges accorded to the Indian constitution. Most women have received housing facility from the Govt. 346 scheme of Indira Awas Yojana. They interact and communicate different officials of block level and district level 347 for getting maximum opportunity of SGSY and their own entrepreneurial efforts, from where they may know 348 different welfare schemes for themselves and they provide maximum effort to capture these benefits without 349 any male support. Therefore, group collectivity makes them confident. Their exposures do them more aware, 350 prompt and dynamic to get proper rights and privileges from patriarchal system of the society. Their community 351 service relate with education, health care make them aware about their family health and nutrition. They follow 352 353 the entire immunization schedule for health protection and take adequate birth control technique to hold small 354 family. p) Building Capacity to Take Leadership Women at group level activity must take the leading role to get proper benefit of SGSY. Members in the group elect president, treasurer, and secretary on rotation basis for 355 smooth functioning of the group. So these elected members gain the power to motivate, influence, and promote 356 the group members in maintaining solidarity, cohesion and friendship among themselves. Besides, they have to 357 contact with other officials to maintain group functioning, disbursement of adequate credit, recovery of loan and 358 gaining maximum subsidy. This ability of networking and leadership make them more confident and fearless 359 to take leading role in broad level activities, like developing infrastructure in the village, protesting against any 360 injustice faced by women, solving family violence, and filling nomination at Panchayat (Local self Government) 361 election etc. q) Empowerment of Women In engaging at credit oriented business enterprise, women have socially, 362 economically and politically empowered. Women are now more confident, assertive and aware of their rights. 363 The women in the SHGs are also respected by the others in the family, because their independent earnings are 364 contributing to household income, expenditure and savings. Therefore after joining in the SHGs, the family 365 366 wealth has been increased. They are recognized by their performances at the community also. They are socially empowered by greater mobility, networking with others at meeting, opportunity to learn new customs and habits, 367 opportunity for self development and family welfare, inspiring to take up business, fight against conservative 368 attitudes and taboos, confidence to hold leadership positions. Their economic empowerment includes knowledge 369 about borrowing funds from the bank, ability to go progressive borrowing, increased income, and sense of economic 370 independence. They are also politically empowered to protest against injustice and capability to take leading 371 role in community services etc. Their empowerment is expressed in their attitudes regarding education, health, 372 nutrition, women in difficult circumstances, violence against women and rights to girl child etc. 373

³⁷⁴ 13 r) Platform to Protest Against Violation of Human Rights

Women are now vociferous to gain their rights from the society. They now get the platform to protest against any type of violence faced by women. Their collectivity makes themselves more bold, prompt and active. They now protest against any type of discrimination, male superiority and domination faced by women traditionally.

379 15 Conclusion

A conclusion that emerges from this account is that micro finance by forming SGHs can contribute to solving 380 the problems of inadequate income of women and rural services as an integral part of poverty alleviation 381 programmes. Very little attention has been given to empowerment questions or ways in which both empowerment 382 and sustainability aims may be accommodated. Due to alternative sources of income the existence of self-help 383 group is very rare in these areas. Women entrepreneurs who are working with self help groups have taken 384 positive steps however small they are towards women empowerment. The general awareness level is not standard 385 among the women entrepreneurs and need training for their development to get better output. In many SGHs 386 and contexts it is only in a minority of cases that women can develop lucrative activities of their own through 387 credit and savings alone. Lack of capital, lack of knowledge of the market, high interest rates etc are the main 388 problems among the women workers. Access to credit has made a lasting impact on the lives of the women 389 particularly on women in the rural areas. Their quality of life has improved a lot. There is an increase in their 390 391 income, savings and consumption expenditure. It enables the poor women to save, improve their confidence and 392 household security. Consumption credit leads to increased level of food security and enhanced access to health 393 and education. Production credit enables the entrepreneurial women to undertake income generation activities. Credit oriented income, livelihood activities enable women to have access to income, enhanced decision making 394 on health, education and consumption within the family. SHGs have also given women a greater role in household 395 decision-making. This shows an improvement in their standard of living. The women have gained self-reliance. 396

15 CONCLUSION

They got an opportunity to improve their hidden talents after joining the SHGs. They can speak freely in front of large groups of people. They got recognition in the family and society.

 $_{399}$ By controlling the resources they can gradually establish the real hegemony in the process of production. $^{1-2}$
