Patriarchy Ideology and Workload Inequality within Household

By Deodatus Katabaro Buberwa

Institute of Rural Development Planning, Tanzania

Abstract- This paper bases on the fact that Patriarchy as a social system and structure enables men in all the roles to which high status is attributed in any society, is crucial in understanding the dominance of men over women, and therefore being a stepping stone to understand the inequalities therein that lead women to begin negotiating for migration. Specifically this paper shows how the patriarchal system among the Gogo people, in Dodoma region Tanzania, creates gender inequalities in society. It examines how the structure of the patriarchy system that emphasizes the power status of male, authority, control of the male and oppression, domination of the man, suppression, humiliation, sub-ordination and subjugation of the women leads to workload inequalities at the disadvantage of women and children. It does so by examining the structure of patriarchal system as being unveiled through gender roles aspect, of the Gogo people. In this aspect there is manifestation of rule by the father and the supremacy of the husband / father within the family, and therefore to the subordination of his wife and his children. The main argument of this paper is that the patriarchal system perpetuates inequalities out of roles played by men and women within the homestead and farm among the Gogo people that lay a foundation for the Gogo women to negotiate for moving outside their communities.

Patriarchy Ideology and Workload Inequality within Household

Deodatus Katabaro Buberwa (PhD)

Abstract- This paper bases on the fact that Patriarchy as a social system and structure enables men in all the roles to which high status is attributed in any society, is crucial in understanding the dominance of men over women, and therefore being a stepping stone to understand the inequalities therein that lead women to begin negotiating for migration. Specifically this paper shows how the patriarchal system among the Gogo people, in Dodoma region Tanzania, creates gender inequalities in society. It examines how the structure of the patriarchy system that emphasizes the power status of male, authority, control of the male and oppression, domination of the man, suppression, humiliation, subordination and subjugation of the women leads to workload inequalities at the disadvantage of women and children. It does so by examining the structure of patriarchal system as being unveiled through gender roles aspect, of the Gogo people. In this aspect there is manifestation of rule by the father and the supremacy of the husband / father within the family, and therefore to the subordination of his wife and his children. The main argument of this paper is that the patriarchal system perpetuates inequalities out of roles played by men and women within the homestead and farm among the Gogo people that lay a foundation for the Gogo women to negotiate for moving outside their communities.

I. INTRODUCTION

It is evident that gender is a significant aspect in understanding issues of women oppression and discrimination. However, the issue of gender inequality is too wide to understand and explain exhaustively in case one does not specify on what force maintaining gender inequality (leading to oppression and discrimination) is to be dealt with. Patriarchy, capitalism and socialism are the forces that in one way or another do maintain gender inequality. For this paper, patriarchy is examined separately from other forces (capitalism and socialism) that maintain gender inequality leading to women oppression and discrimination.

Etymologically, the concept 'patriarchy' derives from two Greek words, *pater* (father) and *arche* (rule). The combination of these two words means the 'rule of the father'. Patriarchy expresses conditions whereby the male members of a society tend to predominate in positions of power. Patriarchy is systems of male domination and female subordination. Joseph (1996), while trying to define patriarchy from the Arab point of

Author: Lecturer; Department of Rural Development and Regional Planning, Institute of Rural Development Planning, Dodoma Tanzania.
e-mail: dkbuberwa@yahoo.com

view, argues that patriarchy has to do with "the prioritizing of the rights of males and elders (including elder women) and the justification of these rights within kinship values which are usually supported by religion". For this paper, patriarchy means a force that maintains gender inequality leading to women oppression and discrimination; it is a system of social structures and practices in which men dominate and exploit women based on the powerful role of a father head.

II. METHODOLOGY

This paper presents part of the findings for the study about, "Influence of Patriarchy Ideology on Rural-Urban Migration in Tanzania: A Case of Gogo Women in Dodoma Region." This was a qualitative study that was conducted in four selected villages of the Gogo rural community in Dodoma region, Tanzania.

Research Design: Research design for the study was Descriptive design because the study aimed at describing the state of patriarchy and inequality as they exist through classification, analysis, and interpretation of data. Descriptive survey was adopted as a method of collecting information by interviewing a sample of individuals. The study aimed at collecting information about people's attitudes, opinion, habits and other social issues related to patriarchy ideology and inequality within household.

Research Approach: The methodological approach for the study was ethno-methodological. This approach implied concentrating its enquiry in the Gogo ethnic group, trying to interpret and understand meanings of reality from the perspective of the Gogo themselves in matters pertaining to patriarchy ideology and inequality within households.

Study Areas and Justification: *Makulu* bearing villages in Dodoma region were selected as the areas of study on Gogo cultural issues. For the Gogo people, a *Makulu* is believed to be a central area in which one finds the "original Gogo people" for understanding true Gogo cultural issues. In actual fact, the *Makulu* is the palace of the Gogo King or people of the royal family. The rural villages of Hombolo Makulu and Hombolo Bwawani were purposely selected because they belong to Hombolo Ward in which there is a *Makulu*. Similarly, Mvumi Makulu and Juhudi villages were selected from Mvumi Makulu ward because of the presence of the

Makulu in the Ward. So, the villages in Dodoma were purposively selected as they contain central areas (*Makulu*) for the Gogo people where the rule of the father as the head dominates the social systems.

Sample size: The sample size of respondents was determined by the predetermined method of data collection to be used in data collection for each category of respondents. The researcher determined to use FGDs to collect data within the rural Gogo community in both Hombolo and Mvumi Makulu wards.

Data Processing and Analysis: The data which were initially tape-recorded were later transcribed into English from Swahili language and then assigned into the *Atlas.ti* program, ready for analysis.

III. FINDINGS AND DISCUSSION

a) Gender Roles and Workload Inequality among the Gogo Women

At a homestead a woman has more roles to play than it is for her husband. Of all the roles to be played in the homestead the husband just deals with security of the homestead while the woman has to clean the house, prepared children for school, prepare food for the family members, and attending the husband. All these roles are tedious and time consuming as they involve many activities. The activities involved in keeping security of the homestead are not so tedious compared to those of a woman. The roles are ascribed to women and men within culture. From the gender perspective, these roles are determined by that culture's assumptions about the potentials and abilities of men and women. Roles are therefore expected performance of someone who occupies a certain position. For women, the roles they play depend on the position they take within the social structure. This implies that the role they play ascribes them a status within a social structure that

determines where they fit in the community and the way they have to relate to other people. Women roles depend on the status assigned to them at birth and at different stages in the life cycles. As such women roles are all about a set of norms specifying the rights and obligations associated with their status in society. The division of roles to play within the homestead among men and women is the reflection of the prevailing patriarchy ideology where there is male domination and female subordination.

Women's status includes complex tasks and relationships, which makes them to have more than one role. Women play their role as mothers, wives, and care takers (reproduction) etc. Each status has normative rights and obligations that guide women into the socially accepted appropriate behavior. From Table 1 it is clear that men are not involved in any of all those activities that women have to do in the homestead. This supports the findings by Siddiqui (2001) who found that in the absence of their wives, men were found to be inflexible in accepting new roles in household management. Instead, the extended family came into operation when women were away. This is indicative of how male roles within the family are rigidly defined and how difficult it is to change them.

b) Workload among the Gogo People

The workload is looked at in terms of the way the Gogo people work ranging from the homestead to the farm and other off-farm activities as summarized on Table 1, 2 and 3.

i. Homestead Works

The woman's roles in the homestead are, generally, maintaining cleanliness, preparing children, preparing food, and attending the husband. The man is just concerned with household security (Table 1).

Table 1 : Rural Men and Women Homestead Works among the Gogo in Dodoma region

		Whose activity?	
		Men	Women
Key role	Activities involved		✓
Cleaning the house	Arranging the house		✓
	Cleaning plates		✓
	Cleaning the house		✓
	Cleaning the compound		✓
	Cleaning the toilet		✓
Preparing children for school	Bathing children		✓
	Dressing the children		✓
Preparing food	Cleaning (pounding, peeling, etc.)		✓
	Grinding		✓

Attending the husband	Cooking		✓
	Boiling water for drinking		✓
	Putting food at 'table'		✓
	Putting bathing water for him		✓
	Carrying food for him		✓
	Preparing his clothes		✓
	Scratching his back when showering		✓
Security of the homestead	Providing sex	✓	✓
	Controlling who comes in and goes out	✓	
	Controlling which animals get in and out	✓	
	Sharpening tools (spears, knives, walking sticks)	✓	

Source: Field Data 2010

With reference to Table 1, it is seen how a woman has got so many roles and activities to take care of; she seems to be one who has to fully stay at home, if she has to do all that. In fact, her area of expertise is supposed to be in the homestead, with a questionable embedded value, as can be seen from this quote:

We work at home; we know what to do with the children and the house; we know how to cook. ... If a man is left at home, what can he do? ... What men are capable of doing is getting out and talking to people; they feel they can get someone to buy some food or a goat meat or chicken and then they make some money for the home. ... (Hombolo Bwawani, FGD, Women, Feb. 2010)

One important thing that is raised in this quote is that the woman's role in the home is considered socially valuable, but economically valueless. For this matter, men shy away from getting involved with such activities at home and they prefer going for outside work that has some income generation. They actually do not know how to deal with housework.

With the work at home, however, women are in control of the homestead in terms of determining the nutritional status, hygiene, and purchases.

I can decide on my own what type of food to buy and prepare for my children when I have some little money to spend. I can buy some clothes, soap, sugar or milk for my children, without making any stories with my man. ... I can buy pens and books for my children. ... I am in charge of all this. (Hombolo Makulu, FGD, Women, Feb. 2010)

ii. Farm Works

Farm works range from the preparation of the farm to the harvesting and storing the produce. Men and women have different roles and activities to play, as can be seen in Table1. Still, with the Table 2 it is clear how a woman's workload in the farm is quite a lot compared to men. The most alarming observation is that the woman does almost every farm activity. This supports Boserup (1970), that in Africa women do most of the farming such as cultivating the subsistence crops whereas men are merely engaged in clearing the land for cultivation. Moreover, there is a Gogo saying that "an idle woman keeps her hoe with no handle". This saying means that in order for a woman to be regarded as a hard-worker, having a hoe with a handle is necessary.

Table 2 : Rural Men and Women farm roles among the Gogo in Dodoma Region

Key role	Activities involved	Whose activity?	
		Men	Women
Preparation of old farm	Cutting crop residues		✓
	Burning crop residues		✓
Preparation of new farm	Clearing the bush/shrubs	✓	✓
	Burning the cleared things	✓	✓
Planting seeds	Digging holes for seeds	✓	✓
	Seed planting	✓	✓
Maintaining the farm	Carrying manure to farm		✓
	Spreading manure		✓

Harvesting	Carrying buckets/bags for harvesting		✓
	Picking the crops	✓	✓
	Carrying the crops back home		✓
	Cleaning of farm produce		✓
	Cleaning of area for seeds cleaning		✓
Storing	Preparing storage facilities	✓	✓
	Carrying crops for storage		✓
	Security of the crops	✓	✓

Source: Field Data, 2010

The above saying implies the creation of gender identity in agriculture based on patriarchy ideology; it looks at idleness through a woman not a man. This supports Brandth (1995) who pioneered the analysis of the construction of gender identities in the context of the agriculture by analyzing the creation of gender images in tractor advertisement. He concluded that women absence in the tractor advertisements supports the symbolic intimacy between men, machinery and management. For a woman creation of gender identities lead into her subordination to men while for a man it leads into his superiority and domination. In actual fact, for the Gogo people, one cannot talk of agriculture without referring to women:

When we say cultivation has begun, it means that almost all women are in the farm busy with their hoes. Every woman should work hard to meet the timing of the cultivation season. For women it is time to show our husbands that we are committed to fulfill our obligation as good wives. An idle woman is one who avoids going to the farm ... (Mvumi Makulu FGD, Women, March, 2010)

I have to grow groundnuts, Bambara nuts and 'Kunde'; these are not many, but specifically for use in preparation of sauce/relish. How can your man (husband) eat food without sauce? And a man cannot get involved in the cultivation of these crops: we should grow them because we deal with the preparation of food. (Hombolo Makulu FGD, Women, Feb. 2010)

Not only do the Gogo men see women central in agriculture, but the Gogo women as well who internalize their central position in the farm, as can be seen from this woman's observation:

When it rains well, that is a good season since there will be good yields. I rejoice for the good season since for me it means having enough food for my family. ... I am ready to saw any seeds when it rains well. ... I have to ensure that I have good seeds. ... I would get annoyed if my husband sells all the crops together with the seeds. (Mvumi Makulu FGD, Women; March, 2010)

So, a woman is happy being at the centre of farming; she is also happy that with farming her family will be food secure; her happiness can last so long as

the husband does not sell the seeds for another planting season. There is another dimension, though, that comes with the woman being at the center of the farming activities:

Even my husband rejoices. He is happy with good yield; he can sell and get some money to buy brew; he is happy because when the people talk about his family, they say the family has food and so he feels he is a strong man; ... it is a pity that as they say he is a strong man, then he gets married to another woman so that he can be felt stronger. (Mvumi Makulu FGD, Women; March, 2010)

With the above quotes, it can be seen that much as the woman is central leading to good harvest, the husband rejoices the more because the merit is his; due to the merits, he can even get married to another woman. This conform findings by What more (1991) who found that it was not the nature of women's work that led to lack of recognition of farm women's work but rather their position within a patriarchy ideology. This is further elaborated by Walby (1990) who calls it a "patriarchal mode of production" where women's labour is expropriated by their husbands and others who live there. She says housewives are the producing class, while husbands are the expropriating class, their back-breaking, endless and repetitive labour is not considered work at all and housewives are seen to be dependent on their husbands. So, there is a material basis for patriarchy. Most property and other productive resources are controlled by men and they pass from one man to another, usually from father to son.

On the other hand, cattle keeping are among the central agricultural activities by women. men (husbands) are mostly the owners of cattle in the homestead. Traditionally, livestock plays vital economic and social roles in the Gogo society. It has direct benefit in terms of provision of milk and manure. In relation to social aspects, the ownership of livestock is an important expression for social status of people in the area and is used in dowry payment. When it happens that there is much crop failure, livestock provides security since animals can be exchanged for food/ grains.

Cattle are incarnation of power among the Gogo people. For those who own cattle, it is a source of respect and power, and makes one influential in the society. Those who own cattle do set themselves apart as the honorable people as they have different products out of animals (milk, meat and manure). They may even sell cattle and get money. Milk is a very precious thing for the Gogo; having it, means having prestige. Apart from drinking it, they process it and get cheese, which is used for cooking. Meat is food for the few people who manage to buy it. Having cattle means ability to have meat in plenty when a cow or goat or sheep is slaughtered. When one has manure it means that he is likely to have good yields and therefore he has food security at his home. He has high quality manure called *gombelo* or *suji* to smear in his farm. The animal skin is used for sleeping on.

On the other hand, the Gogo use cattle as part of dowry. A family with cattle is assured that their sons will get married as they are able to pay dowry. Girls would also like to get married in families which own/keep cattle since such families are regarded as being economically and socially strong. The one who owns cattle is known as *mhaha* while his wife is referred to as *Mdala wa mgoli* (the wife of a rich man). This indicates that the power and respect of the household is in hands of the man who is the owner of cattle; so women are likely to get respect and prestige when they have husbands.

Women, however, face hardships in livestock keeping. A woman has to make sure the cattle shed is clean every day. This is a hard activity assigned to a woman. In case there are calves, a woman has to look after them not very far away from home and come back

to home in the afternoon to attend other activities. Women do not get significant assistance from their men in animal keeping. Sometimes women are forced to keep animals indoors and go to collect fodder, which they get far away from home. Although women are not regarded as owners of cattle but the sustainability of family power and respect given to it is partly in their hands.

iii. *Off-farm Works*

Off-farm activities refer to income-generating activities, besides the agriculture. Sometimes, yields are not good or they are not meant for sale and people need cash so as to purchase other goods like sugar, cooking oil, clothes and some agricultural inputs like hoes, and insecticides. They cannot get all this money from the farm; they need to find other sources of money.

The findings on off-farm activities in Gogo people are illustrated in Table 3. Off-farm activities increase the financial base for the Gogo people. The off-farm activities by the Gogo people include businesses in fish, firewood and charcoal, local brew, running small kiosks, food vending, and labor selling.

With reference to Table 3, men are only involved in two off farm activities which are fish business and charcoal business, however they share these with women as they fish and sell while women fry or smoke fish. On the other hand men make charcoal and sell it but women are also involved in cutting trees for charcoal making. In particular, women do perform some off-farm activities alone like business in firewood, local brew and vegetable vending. Generally women hold a lot of responsibilities in off farm activities.

Table 3 : Rural Men and Women Off-Farm Works among the Gogo in Dodoma Region

From what can be seen in Table 3 women are central in the off-farm activities. They do almost everything, leaving little for men. One of the implications for this is that they are also much occupied with off-farm activities. Another implication would be that women generate enough income for themselves. However, women's efforts to work off-farm do not make them solve their financial problems as such, because their husbands interfere with their businesses. Sometimes a husband will force that some local brew made by the woman is given to his friends and some money acquired by selling it is under his control; men do demand to know the amount of money acquired by their wives and sometimes do dictate on the expenditure. Thus, a woman's contribution on family income does not increase much of her bargaining power regarding the division of housework and childcare responsibilities, even though they have more control in solving imminent problems. This supports the findings by Shartall (2006) who found that women's off farm labor is often part of a farm household survival strategy to maintain that farm and men's occupation as the farmer. Gogo women do passively resist the situation of not benefiting from off-farm activities though they benefit little from such efforts they make. This supports Wozniak and Scholl (1990) and O'Hara (1998), whereby they show that women on the farms are not simply accepting victims of patriarchal relations but rather they are active agents constructing and shaping their roles within farming. This is in line with these study findings that off farm work and the subsequent financial independence are an expression of woman's agency and resistance as this woman points out:

... Sometimes we are forced to be liars. You have to hide your money and pretend you have nothing. Suppose yesterday you asked for some money to buy something for children and your husband responded negatively; today can you dare direct your son to present another problem to his father? We need to keep some money to solve critical problems; at least children have to see things going smoothly. (Juhudi, FGD Women, March, 2010)

Moreover, it is not as easy for women as it is for men to get temporal farm employment. Most people do prefer to employ men as they have no interference in their activities. While women are mostly interfered by

home responsibilities and child caring, men are so free to perform their activities on time. Men are, therefore, more able to get temporal employment than women can do. This indicates that women have to use extra efforts so as to get paid activities in rural areas. This does involve accepting lower pay than man can accept so that they can win the job. It is concluded that there is prevalence of agrarian gender ideology in rural areas which manifests the patriarchy system in such that even though women may have an independent source of income off the farm, the fact of living on a farm means they continue to be positioned as farm women.

iv. Typical Gogo Day and Work

An examination on how both men and women spend their day at home reveals inequalities involved. A woman is always busy to ensure that food is available on time and well cooked for the members of the family. The husband regards his wife to be responsible for the availability of food within the household. This food is expected by the husband to be available on time and accepted as being typical Gogo food. Therefore as her daily responsibility a woman has to cook *Ugali* (hard porridge) to be served with *Mlanda* (a slimy green vegetable).

Off-farm activities would be an escape for women from agricultural constraints, but they do not have enough time for it since they still have many other activities to attend at home and in farms. Moreover, women do not have full control over business they do as they are interfered by their husbands. Due to heavy workload that women have some off farm activities are not done properly.

What can be learnt from the above scenario is that there is division of labor between men and women among the Gogo people. However, a woman has lots of activities during the day and night compared to men, on the one hand, and in the activities she deals with, the man is the greatest beneficiary, smoothly, but sometimes forcefully. Hence, not only do the gender roles among the Gogo people lead to inequality against women in terms of heavy workload, but also in terms of men being central beneficiaries. A woman (wife) is obliged to fulfill her role as a married woman so as to ensure acceptability to her husband and the community at large. Her husband remains an overseer and beneficiary. This confirm the study by Lamichhane

(2008) who found that there are, situations where women have to manage their reproductive workload alone. In such cases, it was seen that women mobilize their social networks of friends and relatives to get the work done. In case of financial difficulties, women arrange money through friends and neighbors and not with their in-laws. This also supports Tahira and Karin (2004), that gender norms as part of the social environment of livelihood strategies influence both women and men's access to livelihood assets and their direct and indirect impact on gendered workload seen as their strategies to achieve a sustainable livelihood.

IV. CONCLUSION

This paper has unveiled how the patriarchy system accommodates inequalities in Gogo society at the disadvantage of women. It has presented workload as an aspect on gender inequalities being propagated by patriarchy ideology, that lead to oppression and discrimination of Gogo women. In this aspect, women have got a heavy workload compared to men. Such workload results from the assigned roles of women that occupy them for a long time during the day and night, ranging from working indoors in the homestead to the farm and off-farm environments.

Women suffer from inequality initiated by purposeful efforts to maintain male dominance. This results into hard life for women. This hard life is brought about by the gender relations that they live, well-informed by the patriarchy system. The limited economic opportunities for women are due to minimum returns from farm and off farm activities and limited capital and time for both farm and off-farm activities. They do not control land; they do not have many paid off farm activities, they do not control what they produce and they are not free to markets of their farm products. Though it is the case that women are busy all the time.

Generally, therefore, migration becomes one of the options to get away from the gender inequalities, stemming from the Gogo patriarchal system that becomes a stumbling agent for their livelihood promotion strategies in the rural areas. This conform the work by Chant (1992) on gender relations and migration which shows that migration is influenced by the organization of productive and reproductive labour within the household; power dynamics, decision-making and gender divisions in rural and urban labour markets.

Effects of Golf Drive Swing on Multiple Functional Wear Wearing

By Jungwoo Kim

Yoin - In Songdam College, Korea

Abstract- The purpose of this study was to verify the effect of drive swing on multiple functional wear wearing in golf. The subjects were 6 men (22.67 ± 0.82 yrs, 175.42 ± 3.42 cm, 78.75 ± 4.78 kg), who had career each with at least 8 years golf experience with right-hander. For kinematical analysis, this study used equipments with 7 motion capture cameras (300Hz) and analysis program (Nexus 1.5). The total time of the club head, displacement magnitude of the COM and swing plane were compared of according to functional wear wearing and non-wearing during golf drive swing. The results of the study are as follows. The total time of the club on wearing (2.18 ± 0.06 sec) was faster than non-wearing (2.52 ± 0.15 sec). Displacement magnitude of the COM on wearing (4.06 ± 0.67 cm) was shorter than non-wearing (5.79 ± 0.72 cm). Also, swing plane was found to be significantly different of 3 phase excepted BST-DS (back swing top - down swing) phase. AD-BST (address - back swing top) phase on wearing (13.86 ± 3.08 cm) decrease more than non-wearing (20.82 ± 3.99 cm), DS-IP (down swing - impact) phase on wearing (6.25 ± 1.35 cm) decrease more than non-wearing (7.18 ± 1.52 cm) and IP - FT (impact - follow through) phase on wearing (7.93 ± 2.09 cm) decrease more than non-wearing (9.68 ± 2.02 cm).

I. INTRODUCTION

Golf is a ball sport in which players use various clubs to hit balls into 18 hole cups on a course in as few strokes as possible. Golf can be divided into "tee shot" using driver in teeing ground, "iron shot" in fairway, rough and bunker, and "putt" in green. In particular, the result of the driver swing, the first strike, has an important effect on selecting the right clubs and building the seamless course strategies for second shot. For this reason, players need to swing the golf club in higher accuracy to move the ball a long distance to the most desirable position. For such higher accuracy of driver swing, the optimal combination of physical bodies' translational movement and club head's rotational movement generates maximum power and moves the ball into the target position. The consistency of such physical movements, the direction and speed of club heads before and after the impact and the position and angle of clubs at the moment of the impact are all determined by the correlation between balls and heads.

Author: Dept. of Stylist, Yong-In Songdam College.
e-mail: rlawjddn1@yisc.ac.kr

(Kwon, 2007) Therefore, having a systematic understanding of the right coordinated movements that allow to maintain the balance in bodies, swing trajectories and swing plane of club movements is very important for consistently accurate driver swings. (Hay, 1985; McLean, 1992; Heuler, 1996) Swing plane is referred to as the plane in the trajectory of club heads during the swing ranging from Address to Follow through. The swing planes are divided into One-Plane or Single Plane where arms and shoulders move up in parallel and Two-Plane where arms and shoulders are up on the different level. (Ben Hogan, 1966; Hardy, 2006; Lim, 2009) In his study in 2007, Kwon used 3D motion analysis technique to estimate the plane that is as close to the trajectory of the club head as possible. He compared the result with the actual swing trajectory and conducted the experiment to calculate swing flatness. As a result, he found that there was no perfect plane swing, but is the swing plane close to the trajectory of the club head. He also discovered that analyzing the swing using the swing flatness would be really helpful to confirm players' swing style or their swing consistency and accuracy. (Lim, 2009).

However, the previous kinematical studies on the driver swing have focused on increasing driving distance by analyzing X-factor that is an angle of relative rotation between pelvis and body segments at the top of back swing, body's rotation movement and good coordinated movements of wrist joints, the muscle power of major muscle contributing to swing, the swing speed of golf clubs and power generation through external force. (Lee, 1999; Kim, 1997; Horton, Lindsay & MacIntosh, 2001; Yi & So, 2004; Park, 2005; So, Lim, Kim & cho, 2005; Craig & Vince, 2010) However, unexpected ball control (hook, slice, draw or fade) caused by the increased driving distance might put professional and amateur golfers at risk of having bad results in the games. In other words, this does not fulfill the conclusive factors of "distance, consistency and accuracy" for good swing. (Koichiro, 1996) Even though the increase in the driving distance is important, the consistency and accuracy of swing are required to have a positive impact on final scores for golfers. Hence, in an effort to meet such conclusive factors for good swing, golfers have incrgly had a keen interest in golf lesson and related equipment. With this trend, golf equipment companies have thrived. (Lim, 2009; Kim, 2011).

In particular, Korean golf market has grown by 5 to 10 percent over the last 10 years. The golf course market is worth 3 trillion won, the golf-ware market is worth 1.2 trillion won, the golf club market is 700 billion won and the golf equipment market is 300 billion won. Given such statistics, the golf industry including the golf equipment market is worth nearly 6 trillion won. (Park, Woo & Lim, 2012).

Recently, many golfers are wearing functional clothing that helps minimize the possible injuries by swing and maximize sports performance. (Chae & Kang, 2011) The major function of multiple functional wears is to keep pleasant physical state for players by facilitating perspiration during the game and eventually improve players' performance in the games by optimizing the mechanical characteristics determined by molecule orientation and crystallization such as tensile strength, friction and flexibility. (Kwon & Kouh, 2002; Doan et al., 2003; Chae & Kang, 2011) It is reported that among various mechanical characteristics of multiple functional wears, compression bandaging that was inspired by a technique of taping heavily used muscles during the game actually improved muscle strength and endurance, relieved muscle pain and fatigue by reducing muscle vibration and eventually enhance play performance with better bending of each joint and better

rotating during the extension. (Doan et al., 2003; Song, 2007; Chae & Kang, 2011) Likewise, the previous studies demonstrate that multiple functional wears that is similar to the taping method would upgrade golf driver swing movement and in the end improve the conclusive factors of consistency and accuracy for good swing by reducing the dispersion of the scope of which muscles and joints move. In conclusion, the main purpose of this study is to investigate and verify the effect of multiple functional wears on golf driving swing through the analysis of kinematical variables.

II. METHODS

a) Subjects

For this study, we chose multiple functional wear brand Z that is on sale in Korea. This brand's multiple functional clothing is characterized by elastic fabrics in the left and right and top and bottom, stitching along the body lines and mesh fabric for the inner side of arms. This clothing is made of 80% of nylon and 20% of polyurethane. (Figure 1) 6 male, right-handed amateur golfers who have played golf for 8 years or higher were specially selected as the subject of this study. Their average age was 22.67 ± 0.82 years, their average height was 175.42 ± 3.42 cm and their average weight was 78.75 ± 4.78 kg.

Fig. 1 : Multiplexfunctional wear product

b) Experimental Equipments

In the study, we installed 7 infrared cameras for motion analysis to analyze the kinematical variables displayed in golf drive swing movements in three dimensions with and without wearing multiple functional clothing. We also attached reflection markers (14 mm in diameter) on the surface of multiple functional wears and clubs to correctly analyze the body movement and club swing, calculate combined movement displacement and analyze the total travel distance of

clubs and swing plane. In total, 35 markers were attached to R/L, Anterior and Posterior Head, R/L Shoulder, R/L ASIS, R/L PSIS, CLAV, STRN, C7, T 10, RBAK, R/L Elbow, R/L, Medial and Lateral Wrist, R/L Finger, R/L Lateral Thigh, R/L Knee, R/L Tibia, R/L Ankle and R/L Toe. In addition, 38 reflection markers were attached to shaft, shaft neck and head of the club by each. Table 1 shows in detail the experimental equipment used in this study. Figure 2 shows where the reflection markers were attached.

Fig. 2 : Marker placements

c) Experimental Procedure

The experiment was conducted in the lab setting that ensured the safety by having sufficient space for the subjects to exert drive swing movement and installing nets at the place to which ball will reach. Infrared camera for motion was used to conduct 3D calibration with the Non-linear transformation (NLT) method and create the global coordinate system of anterior-posterior axis (x-axis), medial-lateral axis (y-axis), and vertical axis (z-axis). All subjects were asked to sign the experiment consent and change their pants into tights before sufficient warming-up and swing

practice. The subjects who got ready for the experiment were selected by random to wear multiple functional wears and ordinary tights. Under the two conditions of wearing and non-wearing multiple functional wears, the subjects did swings 10 times. Given the expected fatigue by repetitive drive swing, the subjects were encouraged to take 10-minute break at the interval of the two conditions. After the end of the swings, they were asked to choose 3 swing movements that they thought to be excellent. Each 3 swing movements selected by every subject was analyzed by researchers.

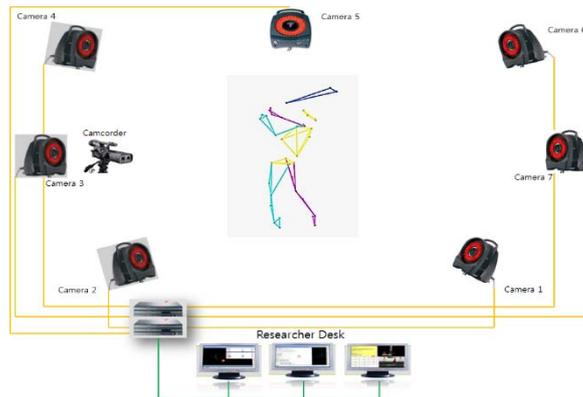

Fig. 3 : Experimental equipments set-up

d) Data Analysis

Figure 4 shows major events and phases required to analyze drive swing movements with wearing multiple functional wears.

Event 1 is the moment of "Address". Event 2 is the moment of "Back Swing" when the markers on the right hand are at the highest position. Event 3 is the moment of "Down Swing" when the vertical position of the markers on the club head is down to the ground. Event 4 is the moment of "Impact" when the ball and club face are met. Event 5 is the moment of "Follow Through" when the shaft and the ground are horizontal after the ball is hit forward. Event 6 is the moment of "Finish" when the markers on right elbow are at the highest position to the left, the direction to which the ball

moves. Furthermore, the six events were broken down into four phases –backswing, downswing, impact and follow –that affect the consistency and accuracy of golf swing the most. The six events and the four phases were analyzed in this study. The ratio of camera sampling was set at 300 Hz per second. The collected data was processed with NEXUS 1.5 program. For 3-dimensional motion analysis, we selected as kinematical variables a) the total travel time of the club head to see how consistent the drive swing movement is, with and without multiple functional wears, b) the body-oriented combined (x, y, z) movement displacement to see how dispersed the body movement is, and c) the swing flatness to analyze the swing plane and check the accuracy of actual drive swing.

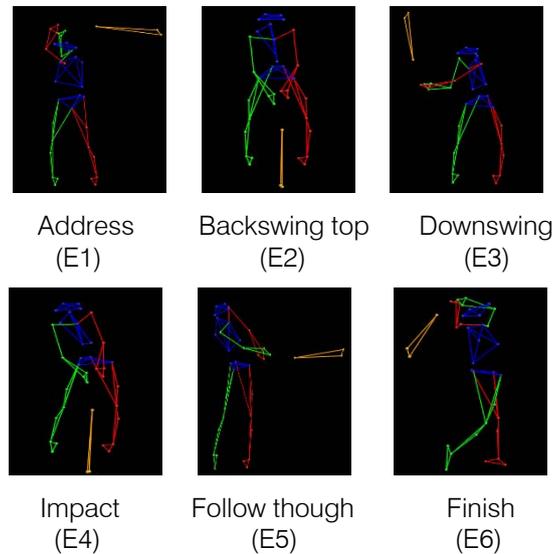

Fig. 4 : Event & phase

e) *Statistical Analysis*

The subjects of this study were asked to do the swings 10 times with wearing and non-wearing multiple functional wears by each in order to find the effect of multiple functional wears on golf drive swing. During this experiment collected was the data on the three swing movements considered appropriate to analyze the swing movements of six subjects with wearing and non-wearing multiple functional wears. (6 people* 2 conditions * 3 movements * 3 variables) Microsoft office excel 2007 was used to estimate the average and the standard deviation of all variables. A statistics analysis program, SPSS 18.0 was also used to conduct paired t-test and thus to verify the statistical significance of the consistency and accuracy of drive swing movements depending on whether to wear and non-wear multiple

functional wears. The significance level was set at $p < .05$.

III. RESULTS AND DISCUSSION

The subjects in this study were randomly selected to wear or non-wear multiple functional wears and do the golf drive swings. The result of analyzing kinematical variables is as follows.

a) *Total time of the club head*

Table 2 shows the difference in the total travel time of the club head from the moment of being ready for the drive swing to that of follow through under the two conditions of wearing and non-wearing multiple functional wears.

Table 2 : Total time of the club head

(Unit: sec)				
Group	N	M	SD	t
Wearing	6	2.18	0.06	-7.18***
Non-Wearing		2.52	0.15	

*** $p < .001$

The result is that the average travel time with wearing multiple functional wears was 0.34 ± 0.09 sec shorter than without multiple functional wears. This difference was found to be statistically significant ($p = .001$). In reality, the shorter the travel time of the club head is, the faster the club head moves. The travel time is also closely related to the travel distance of the ball. (Choi, 1996) This result is not different from the result of the previous studies on multiple functional wears and the improvement of driving distance. However, the average travel time of the club head under the two conditions presented in this study was 2.35 seconds, higher than the previous studies of 0.72 to 0.91 seconds. (Park, Lee & Song, 2000; Lim, 2009) This gap

is believed to drive from the different swing styles of the subjects, their skill levels (professional vs. amateur golfers) and the different definition of phases with the previous studies. With the emphasis on the consistency and accuracy of the swing, the standard deviation values of the total travel time of the club head showed the slight different between wearing and non-wearing multiple functional wears. The standard deviation of wearing multiple functional wears was 0.06, slightly lower than that of non-wearing multiple functional wears at 0.15. This result demonstrates that wearing multiple functional wears have a positive impact on the consistency of body movement during the drive swing.

b) *Displacement magnitude of the COM*

Table 3 shows the difference in the combined movement displacement of COM (center of mass), from the moment of being ready for the drive swing to that of follow through under the two conditions of wearing and non-wearing multiple functional wears. The result is that the average combined movement displacement of body center with wearing multiple functional wears was

1.73±0.05 cm lower than without multiple functional wears. This difference was found to be statistically significant ($p=.002$). How the COM moves at the time of the golf drive swing can vary among players. However, most players move their COM into the right feet at the moment of backswing and back to the left feet at the time of between downswing and follow through, following the direction that the ball travels.

Table 3 : Displacement magnitude of the COM

(Unit: cm)				
Group	N	M	SD	t
Wearing	6	4.06	0.67	-3.18***
Non-Wearing		5.79	0.72	

** $p < .01$

Note: COM - Center of mass.

However, golfing requires the continuous movement of body parts based on anatomical positions into the direction of front-back (x-axis), left-right (y-axis) and verticality (z-axis). Under such circumstance, maintaining body balance and doing the swing is the key. If the center of body is tilted to the front or back, it affects the flying trajectory of the ball and cause Slice or Hook. (Lee, Yang & Kim, 1998) The study in 1993 by Leadbetter and Huggan claimed that the center of gravity must be moved naturally into the target direction to the degree where the center of swing is not swayed. In this way, players can exert the golf swing along with natural rhythm and maintain the accuracy of the ball strike natural rhythm. For this reason, the lower combined movement displacement of body center is can ensure that the central axis of the swing is more stabilized and the consistency and accuracy of the swing is enhanced.

c) *Swing plane*

Table 4 shows the difference in the swing plane, from the moment of being ready for the drive swing to that of follow through under the two conditions of wearing and non-wearing multiple functional wears.

The result is that at the AD-BST phase, the average flatness value with wearing multiple functional wears was 6.96±0.91cm lower than with non-wearing multiple functional wears. The difference was statistically significant. ($p=.03$) At the BST-DS phase, the average flatness value with wearing multiple functional wears was 3.72±0.49cm lower than with non-wearing multiple functional wears. The difference was not statistically significant. ($p=.14$)

Table 4 : Flatness of the Swing

(Unit: cm)					
Phase	Group	N	Mean	SD	t
AD – BST (Max)	Wearing	6	13.86	3.08	-3.30*
	Non-Wearing		20.82	3.99	
BST - DS (Max)	Wearing	6	14.00	3.35	-1.73
	Non-Wearing		17.72	2.86	
DS - IP (Max)	Wearing	6	6.25	1.35	-4.55**
	Non-Wearing		7.18	1.52	
IP - FT (Max)	Wearing	6	7.93	2.09	-3.86**
	Non-Wearing		9.68	2.02	

* $p < .05$, ** $p < .01$

Note: AD-Address, BST-Backswingtop,
DS-Downswing, IP-Impact,
FT-Follow though

At the DS-IP phase, the average flatness value with wearing multiple functional wears was 0.93 ± 0.17 cm lower than with non-wearing multiple functional wears. The difference was statistically significant. ($p=.01$) At the IP-FT phase, the average flatness value with wearing multiple functional wears was 1.75 ± 0.07 cm lower than with non-wearing multiple functional wears. The difference was statistically significant. ($p=.01$) As a result, the difference of the average flatness values between the two conditions of wearing and non-wearing multiple functional wears was all statistically significant at the three phases except for the BST-DS phase. Here, the flatness value is required to analyze swing plane.

Lim reported in his study in 2009 that the good swing in golf is to make the accurate impact on the ball with fast speed. To that end, swinging the club within the consistent trajectory of swing is the key. As such, single plane swing is better than double or multiple plane swing to maintain the more consistent and accurate swing trajectory. If the swing is kept into the right direction consistently, the one plane swing is likely to make the positive impact in repeat and eventually on the ball trajectory. (Hardy, 2006) All in all, it can be concluded that considering the experimental result in this study that the difference of swing plane between wearing and non-wearing multiple functional wears was statistically significant, wearing multiple functional wears contributes to making the swing close to the one plane.

IV. CONCLUSION

The study was designed to verify the effect of wearing multi functional wears on golf drive swing. In this study, we compared and analyzed how the kinematical variables are transformed to assess the consistency and accuracy of the swing with wearing and non-wearing multi functional wears for amateur golfers.

The conclusion of this study is the following. First, there was the statistically significant difference in the total travel time of the drive swing between wearing and non-wearing multi functional wears. The travel time with wearing multi functional wears was shorter than that of non-wearing multi functional wears. This result can be interpreted as wearing multi functional wears increasing the speed of the club head. In addition, the smaller value of the standard deviation with wearing multi functional wears can also be considered as the positive effect of multi functional wears on the consistency of body movement. Second, the result of combined movement displacement of body center analysis showed the statistically significant difference between wearing and non-wearing multi functional wears. The average value of the body center movement with wearing multi functional wears was smaller than that of the opposite case. This means that the axis of body center is not swayed and more stabilized with wearing

multi functional wears, which will improve the consistency and accuracy of the swing. Third, the analysis the variables of the swing plane generated the result that the swing plane with wearing multiple functional wears was lower than with non-wearing multiple functional wears at every phase. The difference between the two conditions was all statistically significant at the AD-BST, DS-IP and IP-FT phases except for BST-DS. This result proves that wearing multiple functional wears can contribute to making the swing close to the swing plane in order to maintain the consistent swing trajectory for the club.

The value of this study lies in quantifying the effect of wearing multiple functional wears inspired by the taping method on golf drive swing with kinematical variables and generating the results. However, the subjects of the study might have felt the different intensity of pressure from multiple functional wears in different body parts. There were also the limits in analyzing kinematical variables to test the consistency and accuracy of the swing and conducting the field test to measure the direction that the ball flies as well as the equipment used in this study, such as the instrument of measuring the ball flying direction. Therefore, what we need to make sure in the follow-up study will be to consider accurately the different physical characteristics of each subject, realize the swing analysis that ensures the accurately measurement of the pressurized body parts and the intensity of multiple functional wears, and fulfill the condition that allows for measuring the ball flying direction. Furthermore, this study is expected to fuel the development of the golf equipment that helps improving the consistency and accuracy of an iron shot and putter shot, not just the drive swing and, going further, lead to the study on the fitting of multiple functional wears for design proposals based on individual's physical characteristics.

How to Get Filthy Rich in Rising Asia by Mohsin Hamid: A Social Satire on Contemporary Pakistan

By Hashir Iftikhar & Muhammad Imran

Hazara University, Pakistan

Abstract- The novel under-study is Mohsin Hamid's How to Get Filthy Rich in Rising Asia. The study is an attempt to seek answer to the question as to whether the novel can be termed as a 'social satire' or not; and whether it is set in contemporary Pakistan or otherwise. This question precisely governs the overall research. The analysis shows that the novel under-study tacitly satirizes the social institutions of the country it is set in. It has been found that it holds the social wrongs of various institutions up to ridicule more than the individual follies. The targets of the attack are social areas like health, education, bureaucracy, industry etc., and sufficient textual proofs support the same. So it can safely be termed as a social satire. As far the unnamed place is concerned, the textual evidences and analysis of secondary sources particularly regarding the level, nature and frequency of ills like corruption, nepotism, terrorism and insecurity corroborate that the novel is set in contemporary Pakistan.

How to Get Filthy Rich in Rising Asia by Mohsin Hamid: A Social Satire on Contemporary Pakistan

Hashir Iftikhar^α & Muhammad Imran^σ

Abstract- The novel under-study is Mohsin Hamid's *How to Get Filthy Rich in Rising Asia*. The study is an attempt to seek answer to the question as to whether the novel can be termed as a 'social satire' or not; and whether it is set in contemporary Pakistan or otherwise. This question precisely governs the overall research. The analysis shows that the novel under-study tacitly satirizes the social institutions of the country it is set in. It has been found that it holds the social wrongs of various institutions up to ridicule more than the individual follies. The targets of the attack are social areas like health, education, bureaucracy, industry etc., and sufficient textual proofs support the same. So it can safely be termed as a social satire. As far the unnamed place is concerned, the textual evidences and analysis of secondary sources particularly regarding the level, nature and frequency of ills like corruption, nepotism, terrorism and insecurity corroborate that the novel is set in contemporary Pakistan.

I. INTRODUCTION

Modern-day Pakistan is facing numerous socio-economic problems which have, to a larger extent, undermined the social texture and the credibility of various institutions. Inequitable distribution of wealth, improper utilization of country's resources and unchecked rise in population have engendered several concerns regarding living standard, health and education of the masses. Bulk of population living below poverty line is compelled to live in the same way - deprived of social and economic benefits. In Pakistan, poverty drastically crushes down the already down-trodden lot that in turn gives way to many social ills. As Momina Cheema quotes Bertrand Russell in her essay titled *Shaping the Future of Pakistan*. She writes, "The British philosopher Bertrand Russell once remarked, "If one man offers you democracy and another offers you a bag of grain, at what stage of starvation will you prefer the grain to the vote?" Clearly, before Pakistan can tackle such complex issues as democracy and globalization, it must deal with the most basic concerns of human survival. Poverty is the first and foremost challenge Pakistan faces in the 21st century. More than a third of the population falls below the poverty line" (Cheema, 2013). In order to get rich in this country in a relatively shorter span of time, one needs to follow an out-of-box strategy besides hard work and devotion. As

the novel under-study suggests, one needs to have links with politicians and bureaucrats to legalize one's otherwise substandard business operating procedures. The novel *How To Get Filthy Rich In Rising Asia* carries one of such themes and it tacitly evinces rampant corruption and weak social institutions. Hamid styles the novel as a sort of self-help book of how to succeed in business. The book has twelve chapters each laying out a guideline for success in business in modern Asia which include "Get an Education," "Don't Fall in Love," "Avoid Idealists," "Work for Yourself," and similar others. Written as a self-help book, he addresses his protagonist as 'you'. The 'you' is not named. Neither is the country or city he lives in nor his wife or son, who are all referred to in generic terms – his lover is always "the pretty girl" no matter how old she grows. The protagonist moves from rural area to a metropolis with his family. In the big city he gets himself education and a job of delivering DVDs for a video retailer, which brings him into contact with the pretty girl, who works at a beauty salon and is plotting her escape from her dysfunctional family. He falls in love with the pretty girl and installs her as the ideal woman in his heart, where she will remain ever after. He goes to a university and falls in with some sort of political organization that in exchange for membership offers him a monthly cash stipend, food and clothing, and a bed. His mother dies of cancer. Arifa Akbar writes in her review, "The death of the main character's mother from cancer – protracted because treatment is unaffordable – is quietly devastating" (Akbar, 2013). Learning the rules to being a business success as he goes along, he leaves his village and family behind, has an irregular, long-term, mostly distant relationship with the 'pretty girl'. He gets married and has a son, and maneuvers deftly through the poverty, crime and bizarre bureaucracy. I have incorporated the said novel in my study that will attempt to seek answer to the following question.

a) Research Question

- Is the novel *How to Get Filthy Rich in Rising Asia* by Mohsin Hamid a social satire on contemporary Pakistan?

b) Purpose & Significance of the Study

In the criticism of contemporary Pakistani English novels, it would be a new addition. There is a

Author α σ: Hazara University, Mansehra.
e-mail: hashir.iftikhar@gmail.com

need to critically evaluate and recognize the contribution of the Pakistani English writers. The study is an effort to bring contemporary Pakistani novelist Mohsin Hamid and his latest work into critical focus. It will pave the way for other researchers to take up such projects in future. The study will analyze as to whether the novel under-study may be termed as a social satire and whether there are any evidences that it is set in modern-day Pakistan.

c) *Review of Literature*

Theo Tait in the book-review refers to Rana Dasgupta's article about India's new rich in which he explained that India's economic growth had been quite explosive for the small English-speaking upper class to monopolize its profits. The old cosmopolitan elites, he maintained, are now crowded by private businessmen, estate agents, retailers and general wheel-dealers that are less well-versed in English but they are making enormous money and in fact, wielding more political power. They are not the higher degree-holders but are skilled in the field of opportunity and profit and "they are at home in the booming world of overloads, connections, bribes, political loopholes, sweeteners – and occasional violence – that sends their Anglicized peers running for the nearest cappuccino" (Tait, 2013). Tait says that Hamid's *How to Get Filthy Rich in Rising Asia* follows the rise and fall of one of these wheel-dealers. "The novel is set in Pakistan, not India, in a megalopolis that mostly resembles his hometown, Lahore" (Tait, 2013). The reviewer adds that the novel has certain complex moves, however, initially "it seems to be a satire powered by a cool, rational fury about the condition of life in Pakistan" (Tait, 2013). The protagonist of the novel, referred to as "you" dreams of becoming rich. He learns the ways of becoming filthy rich and uses them with great acumen. The business he founds is purely based on deception but he knows he is not the only one doing so. 'When in Rome, do as Romans do' is very much in his mind. His setting up of water-business and the under-hand dealings with the bureaucrat and politician to gain success may rightly be understood as a pungent satire on Pakistani society and its standards. Michiko Kakutani writes, "From a job as "a non-expired-labeled expired-goods salesman" (which means exactly what it sounds like, selling old items that have been relabeled with new expiration dates) he sets himself up as a bottled-water tycoon" (Kakutani, 2013). The reviewer adds that the hero's business is that of pouring boiled tap water into mineral-water bottles recovered from restaurants, which gradually evolves into a thriving big-time business, enabling him to ascend into the firmament of the wealthy with a big house, a driver and lots of security to protect him from the envious rabble. Lack of transparent check and balance and approval by the authorities of something that is unethical and substandard certainly show corruptible institutions. In

this regard Parul Sehgal asserts that the depiction of various things in the novel suggests that we are in Pakistan. For instance, the growing concern for the bulk of the country's population being the non-availability of clean water hardly evades the novelist's attention. Hamid satirically points towards poor sewerage system of the country, where pipes of drinking water are in dilapidated condition; their cracks allow the gutter contents sneak in, "with the result that taps in locales rich and poor alike disgorge liquids that, while for the most part clear and odorless, reliably contain trace levels of feces and microorganisms capable of causing diarrhea, hepatitis, dysentery and typhoid" (Hamid, 2013, p.99). In addition to health issues, the novelist satirizes other ills like institutional corruption, terrorism, bribery and violence etc. which are interspersed in such a way that it corroborates Pakistan as the most probable venue. The reviewer writes about the novelist, "He's never merely telling a story, he's pitting his story against prevailing narratives about Pakistan, the roots of radicalization, the unevenness of economic growth" (Sehgal, 2013). Sehgal adds that Mohsin Hamid like Mohammed Hanif, the author of *Our Lady of Alice Bhatti*, "creates characters who enact the life of the nation" (Sehgal, 2013). In the same vein does Alex Gilvarry call the novel a satiric commentary of today's Pakistan. The reviewer writes, "The city of Rising Asia remains nameless, but through the lens of Hamid's critical eye, we understand it to be a metropolis closely resembling Lahore, Pakistan. Drones fly overhead. Corruption, terrorism, and violence are everyday occurrences" (Gilvarry, 2013). Claire Chambers in the book-review juxtaposes the current social scenario of Pakistan with that of General Zia ul Haq's time. The aftermaths of Zia's Islamization are clearly perceptible in contemporary Pakistan which makes it most probable that the novel is set here. Chambers remarks, "The characters age and the plot spans at least six decades, but the social affairs, technologies and politics of Pakistan are pure twenty-first-century throughout, replete with mobile phones, bombings, drone attacks, bearded Islamists and covered women, even though Pakistan only began to Islamize during President Zia's despotic regime of 1977-88" (Chambers, 2013). Leslie N. Patino's review on the book suggests that it is satiric commentary on a third world country. According to the reviewer, the story of unnamed protagonist told by an unsentimental narrator look "wholly believable in the third world where widespread poverty drains individuals and impacts almost every aspect of society including questions of morality" (Patino, 2013). In fact, the events and details of the mentioned facets of life reflect Pakistani society. Ron Charles, while commenting on the genre – self-help book says that Hamid "transformed it to tell the story of an ambitious man in the Third World" (Charles, 2013). It's, according to the reviewer, a melancholy reflection on modern life where

"Rampant nepotism, bribes and corruption are the rule. Political parties are just rival gangs, assassins ride motorcycles down the crowded streets and terrorists' bombs randomly rip apart lives and homes without any particular reason" (Charles, 2013).

Jim Cullen in the book-review puts in, "It (How to Get Filthy Rich in Rising Asia) is a wonderful love story, an eloquent case study of the pros and cons of family nepotism as a society safety net and a brilliant expose of the inner workings of military/industrial / governmental corruption" (Cullen, 2013). This shows that the novelist has deliberately launched satire on the country's sorry state of institutional affairs. William Skidelsky makes a good point on the first word of the novel's title. He writes, "Hamid adds extra satirical bite to this tale by presenting it in the guise of an inspirational 'how to' guide, of the sort that has become popular in sub-continental Asia" (Skidelsky, 2013). He terms it an effective satire. However, the technique of not naming people and places give it more generality. He remarks, "And the truth is that *How to Get Filthy Rich in Rising Asia*, while effective as satire, works less well on the human level. The basic problem is that the generalising tendency of self-help (a genre whose goal is to suggest that we are basically all the same) rubs up against literature's need for specificity" (Skidelsky, 2013).

II. RESEARCH METHODOLOGY

a) Methodology and Plan of Research

The present study falls in the category of qualitative research and it will make use of 'social satire' as a perspective. A close textual analysis as well as analysis of the secondary sources on the work concerned will be carried out. The study is related with whether the novel under-study is a social satire on contemporary Pakistan or not. With the definition of the term 'satire' and keeping in mind the current social scenario in Pakistan, certain benchmarks will be set to test the hypothetical question. Textual evidences will be quite important in this respect and the supporting ones will be highlighted. I intend to carry out close reading of the suggested text to sort out relevant passages for the analysis. Ultimately the project will be shaped as social and literary analysis.

b) Structure of the Study

The sequence of the steps to be followed during this research is as under:

- o To explain the term 'social satire' to set it as a benchmark against which the analysis can be carried out.
- o To find out the evidences from the text as to whether the said work falls in the category of satire.
- o To see if the novel is set in Pakistan, though the locality is unnamed.
- o Conclusion

c) Research Method and Procedure

This research focuses on reading the selected text of Mohsin Hamid's *How to Get Filthy Rich in Rising Asia* other related researches/reviews that have been done in this field before. 'Social Satire' is used to form the basis of the study. The work under study is analyzed from the perspective of social texture depicted therein. Important texts, sourced from academic and public libraries, are consulted as the most significant sources of critical information.

d) Data Analysis

i. Satire

Concise Encyclopedia defines satire as an "artistic form in which human or individual vices, folly, abuses, or shortcomings are held up to censure by means of ridicule, derision, burlesque, irony, or other methods, sometimes with the intent to bring about improvement". Robert Harris in the essay titled *The Purpose and Method of Satire* states that the best definitions of satire should be coined from the blend of its corrective purpose and its literary use. A reasonable definition of satire, then, is "a literary manner which blends a critical attitude with humor and wit to the end that human institutions or humanity may be improved. The true satirist is conscious of the frailty of institutions of man's devising and attempts through laughter not so much to tear them down as to inspire a remodeling (Harris, 1990. P.1) Harris is in the same essay says that satire is essentially moral even when the values are not explicitly stated. The satirist draws the attention to something that is being violated. As he puts in, "The satirist does not need to state specific moral alternatives to replace the villainy he attacks because the morality is either already present in the lip service his target pays to virtue, or it is apparent by implication" (Harris, 1990, p.3). It is in the light of these lines that the novel under-study is to be judged as to see whether it falls in the category of satire or not. In this novel, the incidents and occasions are not wanting where Hamid has launched attack, mainly through irony, on the social institutions and malpractices therein. They can be analyzed in separate headings.

ii. Health and Education

Both these sectors, without doubt, serve as backbone to a country's strength. Progress of a nation is largely dependent, among other things, on these two areas. If a country ensures its citizens proper health and education facilities irrespective of their caste, class and creed, it sails smoothly on the track of progress and success. Illiterate and diseased majority is a drain on country's economy. It is quite ironical that in modern-day Pakistan, these two areas are ignored more than any other sector. As a result, many fatal diseases are spreading at an alarming rate at one hand and uneducated mindset getting dominant on the other. Mohsin Hamid's *How to Get Filthy Rich in Rising Asia* is

basically the story of a poor rural boy who becomes a business tycoon by a dint of his understanding of the ways of getting rich. In the backdrop of his story, the novelist gets a chance to highlight the social degradation in several areas. The technique of not naming the characters and places is used to render the novel a wider sweep and generality. The village the young boy lives in gives the description of general rural landscaping of the country. The residents are compelled to drink water from the same places their cattle do and rainfall in monsoon leaves many pools of stagnant water which are feeding grounds for the germs causing various diseases. "The people of your village relive themselves downstream of where they wash their clothes, a place in turn downstream of where they drink. Farther upstream, the village before yours does the same" (Hamid, 2013, p.6). The fact that protagonist's sister died of dengue fever points towards the indifference of health authorities and lack of strategies on their part to combat the killing virus that has claimed the lives of many in Pakistan in the past few years. "Your sister is killed by dengue, her high fever relenting, and briefly offering false hope, before internal bleeding starves her organs and causes them to fail" (p.131). Besides, the miserable plight of governmental educational institutions and exam system are also brought into satirical focus. Corporeal punishment is still in practice in many educational institutes in Pakistan. "You" – the hero of the novel studies at a school where students are not allowed to ask questions. They have to give affirmative nod to what their teachers say. "You" makes the mistake of correcting his teacher's error for which he pays the penalty as Hamid points, "Today your teacher reaches into the pocket of his tunic, where he keeps a small amount of coarse sand, and grips you by the ear, the sand on his fingertips adding abrasion to the enormous pressure he applies, so that your earlobe is not only crushed but also made raw and slightly bloody" (p.23). Such practices are common in Pakistan where teacher-student relationship in most parts is considered as brute master and slave relationship. The novel also satirizes the state of affairs in the school and during exams. He writes, "There are fifty pupils in your class and stools for thirty. The others sit on the floor or stand" (p.21). Even worse is seen during exams. "A small payment and exam invigilators are willing to overlook neighborly cheating. More and someone else can be sat in your seat to write your paper. More still and no writing needed, blank exam books becoming, miraculously, a first-class result" (p.60). These things certainly don't look surprising to a Pakistani reader.

iii. *Rampant Corruption and Nepotism*

The analysis of the novel shows that corruption pervades even the most sacred of professions like teaching and schooling. Hamid's satiric fingers do expose it in the novel. He asserts that there are many

incidents where the inductions of teachers are done through bribery and nepotism. "A bribe", he writes, "equivalent to sixty percent of one year's prospective salary, and a good low-level connection in the education bureaucracy in the form of a cousin, secured only the post he (teacher) currently occupies" (Hamid, 2013, p.23). It is quite ironical that the people who are supposed to be the stakeholders in the esteemed enterprise of nation and character building get a place not on merit but through unfair means. It is a big satirical question as how the characterless ones are going to help build a sound character. At another place Hamid says that it is the place (most probably Pakistan), where one might prefer to become a meter reader to being a teacher mainly because there would be more chances of corruption and where people are ever-ready to steal electricity. In connection with the case of protagonist's success in running a fake business, the negative role of bureaucracy and politician in giving him the NOC is also satirized by the novelist. In order to meet the bureaucrat concerned he gave many bribes to the personnel of the office. During the course of his business, "permits denied, inspections failed, meters improperly read, audits initiated, all these scams and hassles you have over the years surmounted by greasing junior and mid-level palms" (p.141). The success in business would, therefore, largely depend on one's connections with bureaucracy and politicians.

iv. *Terrorism*

Terrorism is one of the lethal social problems Pakistan is facing of late and which has taken myriads of innocent lives. Bomb blasts, suicide attacks, target killings etc. have been the day-to-day occurrences. They have instilled a massive wave of terror and sense of insecurity among the people. Though Mohsin Hamid does not give a detailed account of the acts of terrorism but a clue to this prevailing menace clearly evinces that the locale of the novel is no other than contemporary Pakistan. He shows satirical approach in suggesting that the use of violence is one of the prerequisites for getting along well in business in this country. It is one of the many guidelines stated in the form of titles of chapters in the novel. When hero goes to meet the politician, the security situation at the latter's residence do show his apprehension of the prospective violence. Hamid writes, "Fears of terrorism have led the politician to take measures to secure his residence, erecting a razor wire topped boundary wall far in excess of permissible heights" (p. 144). He has also detailed a number of policemen for his security. The satire may be understood in a way that politician's life is more precious than thousands of laymen exposed to any kind of life-taking violence round the clock. In the novel, there is also another mention of bomb blast that took place in a hotel earlier some time. "The hotel is the city's most exclusive, its old wind temporarily closed and scaffolded

since a massive truck bomb shattered windows and ignited fires inside..." (p.103).

III. CONCLUSION

The work selected for this research is Mohsin Hamid's novel *How to Get Filthy Rich in Rising Asia*. The study conducted has been based on the research question to which I have sought the answer. The research shows that the novel under-study tacitly satirizes the social institutions of the country it is set in. It has been found that it holds up the social wrongs of various institutions to ridicule more than the individual follies. The targets of the attack are social areas like health, education, bureaucracy, industry etc., so it can safely be termed as a social satire. As far the unnamed place is concerned, the textual evidences and analysis of secondary sources particularly regarding the level, nature and frequency of ills like corruption, nepotism, terrorism and insecurity corroborate that the novel is set in contemporary Pakistan. I am hopeful that this research would be a helpful study for the future researchers in analyzing the work from different angles. The study would really be a contribution towards literary criticism of Pakistani English fiction.

Women Education: Need for Sustainable Development

By Mrs. Manisha Sharma

Guru Nanak Dev University, India

Abstract- Women are the backbone of any civilized society. Be it a role of friend, daughter, sister, wife, mother or a role of a working women, women have facilitated this male dominant society in every aspect. Women constitute approximately 50% of the World's population. But she does not have equal share at, nutrition, work place, property ownership and especially education. Though the law ensures equality in men and women in all aspects, yet still there are many women who remain uneducated due to orthodoxy, security concerns, traditions and cultures etc. of many societies worldwide. Sustainable Development is that kind of development which aims at meeting the needs of the present generation without compromising the ability of future generations to meet their own needs. Hence if it is needed, we need to concentrate on women education which still remains an unattainable goal in India since independence. In the words of Shahi Tharoor (Times of India, 2013), "Even today after 65 years of Independence, the literacy rate of women is just at 65.5% compared to the more healthy 82.1% for men". So if we want India to develop and to sustain that development, women education need a serious concern. This paper is an attempt to throw lights on various aspects related to women education and its need for sustainable development so that the future remains bright.

Women Education: Need for Sustainable Development

Mrs. Manisha Sharma

Abstract- Women are the backbone of any civilized society. Be it a role of friend, daughter, sister, wife, mother or a role of a working women, women have facilitated this male dominant society in every aspect. Women constitute approximately 50% of the World's population. But she does not have equal share at, nutrition, work place, property ownership and especially education. Though the law ensures equality in men and women in all aspects, yet still there are many women who remain uneducated due to orthodoxy, security concerns, traditions and cultures etc. of many societies worldwide. Sustainable Development is that kind of development which aims at meeting the needs of the present generation without compromising the ability of future generations to meet their own needs. Hence if it is needed, we need to concentrate on women education which still remains an unattainable goal in India since independence. In the words of Shahi Tharoor (Times of India, 2013), "Even today after 65 years of independence, the literacy rate of women is just at 65.5% compared to the more healthy 82.1% for men". So if we want India to develop and to sustain that development, women education need a serious concern. This paper is an attempt to throw lights on various aspects related to women education and its need for sustainable development so that the future remains bright.

I. INTRODUCTION

United Nations General Assembly in its 57th meeting in December 2002, proclaimed 2005-2014 as *UN Decade of Education for Sustainable Development*. It emphasizes education of all to be an indispensable element for achieving sustainable development. The *vision* of Education for Sustainable Development (ESD) is a world where everyone has the opportunity to benefit from quality education and learn the values, behaviour and lifestyles required for a sustainable future and for positive societal transformation.

Women plays important and varied roles from home to society to workplace as a homemaker, societal well being and job provider and job seeker respectively. Her role is of paramount interest to the economy as she contributes near about 50 % of the world population. Her education is essential for sustainable development as Greg Mortenson says,

"If you teach a boy, you educate an individual; but if you *teach a girl*, you educate a community."

A woman is a teacher, a mother, a politician, an employer or an employee etc. She is said to be the first

teacher of a man. The values given by her to the children remains throughout with them and guide their way in all walks of life. It is hence she, if being educated for sustainable development can bring a drastic change in life not only of hers but for the future generations too. Sustainable Development is nothing but utilizing the present facilities and technologies etc. without compromising the needs of the future generations to meet their own. This is what can be better done by educating the women.

II. PILLARS OF SUSTAINABLE DEVELOPMENT

There are three pillars of Sustainable Development viz, *society, environment and economy*. ESD (Education for Sustainable Development) equally addresses these three pillars of sustainable development with *culture* as an essential additional and underlying dimension. These pillars enable all individuals to fully develop the knowledge, values and skills that are necessary to improve their quality of life. These pillars are not that supportive to the female counterpart in many countries and hence are not good for sustainable development.

a) Society

Society is the place where a person lives, grows and practices culture. The society plays an important role in upliftment as well as deterioration of an individual. Society is not much favorable to women as data reflects. 2013 global review of available data says that 35 per cent of women worldwide have experienced violence either physically and/or sexually more than once in their life. This figure falls to 30% only when violence against women by intimate partners was studied. In India, the distribution pattern of crimes against women too has not changed much in the last few years, but between 2001 and 2011, the overall number of incidents of crime against women rose steadily, and was 59% higher than that in 2001. This is one of the aspect. Women are far low in education, economic participation, physical safety and health etc. Issues. In such a society, how can one think of sustainable development or even development?

b) Environment

Environment consists of those surroundings which are experienced by a person in the form of his parents, siblings, neighbours and peer group etc.. These people put direct and indirect pressure on an

Author: Research Scholar, Guru Nanak Dev University, Amritsar.
e-mail: manishash79@gmail.com

individual to behave in an acceptable manner. In India only, female child population in the age group of 0-6 years was 78.83 million in 2001 which declined to 75.84 million in 2011. The reason is not letting the female child to take birth and if she has somehow taken birth, killing her by any of the popular method by family members or mothers under the pressure of family members. In such an environment, where the existence of female has become questionable, sustainable development cannot be achieved.

c) *Economy*

In the World, as a proportion of male economic participation, female participation in the labor force has remained constant at 65% between 1991 and 2009. In India, the female participation in labor force is 29% only. It has become a global consensus too that approximately 30% female representation in key political decision-making positions is needed for women to bring about significant and meaningful change. In the 46 countries with lower or single chamber parliament, data available for 2010 says that women representatives comprised less than 10% in 20 countries. In such an economy, sustainable development will be far reaching dream.

If we really need sustainable development, these pillars need to be channelized to work in favour of women and educating women can be the first step to it.

III. EDUCATING WOMEN FOR SUSTAINABLE DEVELOPMENT

Education for all is on World agenda. In India also, as per RTE Act, 2009, Education is the fundamental right of every child irrespective of sex, color, caste and creed. But in reality, that is exactly not the case especially for women. Mostly sons are being sent to schools for the study. Again the drop out rates of girls are more than that of boys at elementary stage. Today, nearly 17% of the world's adult population is illiterate. Two third of them are women. Approximately, 122 million youth globally are illiterate, of which young women represent 60.7%. So far as literacy rate in India is concerned, it is 82% of males and 65% of females according to 2011 census. So educating women should be the foremost priority of every Government of any country if they want to develop. If we talk of Education for sustainable development, then it again becomes priori to all other agendas.

a) *How does Educating Women help in sustainable Development?*

ESD is for everyone, at all walks of life and in all possible learning contexts. Education for Sustainable Development helps every individual to acquire the knowledge, skills, attitudes and values necessary to shape a sustainable and better future. It also requires participatory and developing society, economy and

environment for sustainable development. This participation will be complete only if women are given their due place everywhere without any kind of gender discrimination. Hence educating Women helps in multifold ways to achieve the goal of sustainable development as discussed below:

i. *Employment*

Education is a great tool to impart knowledge, develop motor abilities, change the attitude and improve the self confidence. It increases employment opportunities, income and self dependence. Employment gives the income and improves the economic position of the women. Employed women are given due importance by the family members. Hence educating women can prove to be a prime factor to bring gender equality, upliftment of women and sustainable development.

ii. *Economic Independence*

Woman economic and political participation is quite low. So her economic independence has been in question for the ages. Education helps women to get employment which in turn helps in getting economic independence. Economic independence frees the women from the dependency position and boost her self confidence. Such a woman helps in the national economic development and hence in Sustainable development.

iii. *Empowerment*

Educated Women is empowered. She is aware of her own rights and duties. She asks society to accept her as an equal gender like male. She avails of all opportunities of development and national participation and hence plays a significant role in Sustainable development.

iv. *Self-confidence*

Women need self confidence to fight against all the atrocities against her and to live a self esteemed and respected life. Hence, education helps in bringing in her this self confidence.

v. *Decision Making*

In many societies especially Indian societies, the decision making power lies with men. Mostly males take the importance decisions in the family and in the society. The one aspect to this is also the less education of the females. Hence, in order to end this gender discrimination, education empowers women with decision making power which helps in Sustainable development.

IV. CONCLUSION

A nation or society, without the participation of women cannot even achieve the development; sustainable development is hence a far reaching dream. So if we want to achieve sustainable development, Women education is the need of the hour which must be

given due consideration at both societal and Government levels.

GLOBAL JOURNALS INC. (US) GUIDELINES HANDBOOK 2016

WWW.GLOBALJOURNALS.ORG

FELLOWS

FELLOW OF ASSOCIATION OF RESEARCH SOCIETY IN HUMAN SCIENCE (FARSHS)

Global Journals Incorporate (USA) is accredited by Open Association of Research Society (OARS), U.S.A and in turn, awards “FARSHS” title to individuals. The 'FARSHS' title is accorded to a selected professional after the approval of the Editor-in-Chief/Editorial Board Members/Dean.

- The “FARSHS” is a dignified title which is accorded to a person’s name viz. Dr. John E. Hall, Ph.D., FARSS or William Walldroff, M.S., FARSHS.

FARSHS accrediting is an honor. It authenticates your research activities. After recognition as FARSHS, you can add 'FARSHS' title with your name as you use this recognition as additional suffix to your status. This will definitely enhance and add more value and repute to your name. You may use it on your professional Counseling Materials such as CV, Resume, and Visiting Card etc.

The following benefits can be availed by you only for next three years from the date of certification:

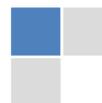

FARSHS designated members are entitled to avail a 40% discount while publishing their research papers (of a single author) with Global Journals Incorporation (USA), if the same is accepted by Editorial Board/Peer Reviewers. If you are a main author or co-author in case of multiple authors, you will be entitled to avail discount of 10%.

Once FARSHS title is accorded, the Fellow is authorized to organize symposium/seminar/conference on behalf of Global Journal Incorporation (USA). The Fellow can also participate in conference/seminar/symposium organized by another institution as representative of Global Journal. In both the cases, it is mandatory for him to discuss with us and obtain our consent.

You may join as member of the Editorial Board of Global Journals Incorporation (USA) after successful completion of three years as Fellow and as Peer Reviewer. In addition, it is also desirable that you should organize seminar/symposium/conference at least once.

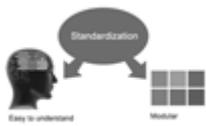

We shall provide you intimation regarding launching of e-version of journal of your stream time to time. This may be utilized in your library for the enrichment of knowledge of your students as well as it can also be helpful for the concerned faculty members.

The FARSHS can go through standards of OARS. You can also play vital role if you have any suggestions so that proper amendment can take place to improve the same for the benefit of entire research community.

As FARSHS, you will be given a renowned, secure and free professional email address with 100 GB of space e.g. johnhall@globaljournals.org. This will include Webmail, Spam Assassin, Email Forwarders, Auto-Responders, Email Delivery Route tracing, etc.

The FARSHS will be eligible for a free application of standardization of their researches. Standardization of research will be subject to acceptability within stipulated norms as the next step after publishing in a journal. We shall depute a team of specialized research professionals who will render their services for elevating your researches to next higher level, which is worldwide open standardization.

The FARSHS member can apply for grading and certification of standards of the educational and Institutional Degrees to Open Association of Research, Society U.S.A. Once you are designated as FARSHS, you may send us a scanned copy of all of your credentials. OARS will verify, grade and certify them. This will be based on your academic records, quality of research papers published by you, and some more criteria. After certification of all your credentials by OARS, they will be published on your Fellow Profile link on website <https://associationofresearch.org> which will be helpful to upgrade the dignity.

The FARSHS members can avail the benefits of free research podcasting in Global Research Radio with their research documents. After publishing the work, (including published elsewhere worldwide with proper authorization) you can upload your research paper with your recorded voice or you can utilize chargeable services of our professional RJs to record your paper in their voice on request.

The FARSHS member also entitled to get the benefits of free research podcasting of their research documents through video clips. We can also streamline your conference videos and display your slides/ online slides and online research video clips at reasonable charges, on request.

The FARSHS is eligible to earn from sales proceeds of his/her researches/reference/review Books or literature, while publishing with Global Journals. The FARSHS can decide whether he/she would like to publish his/her research in a closed manner. In this case, whenever readers purchase that individual research paper for reading, maximum 60% of its profit earned as royalty by Global Journals, will be credited to his/her bank account. The entire entitled amount will be credited to his/her bank account exceeding limit of minimum fixed balance. There is no minimum time limit for collection. The FARSS member can decide its price and we can help in making the right decision.

The FARSHS member is eligible to join as a paid peer reviewer at Global Journals Incorporation (USA) and can get remuneration of 15% of author fees, taken from the author of a respective paper. After reviewing 5 or more papers you can request to transfer the amount to your bank account.

MEMBER OF ASSOCIATION OF RESEARCH SOCIETY IN HUMAN SCIENCE (MARSHS)

The ' MARSHS ' title is accorded to a selected professional after the approval of the Editor-in-Chief / Editorial Board Members/Dean.

The “MARSHS” is a dignified ornament which is accorded to a person’s name viz. Dr John E. Hall, Ph.D., MARSHS or William Walldroff, M.S., MARSHS.

MARSHS accrediting is an honor. It authenticates your research activities. After becoming MARSHS, you can add 'MARSHS' title with your name as you use this recognition as additional suffix to your status. This will definitely enhance and add more value and repute to your name. You may use it on your professional Counseling Materials such as CV, Resume, Visiting Card and Name Plate etc.

The following benefits can be availed by you only for next three years from the date of certification.

MARSHS designated members are entitled to avail a 25% discount while publishing their research papers (of a single author) in Global Journals Inc., if the same is accepted by our Editorial Board and Peer Reviewers. If you are a main author or co-author of a group of authors, you will get discount of 10%.

As MARSHS, you will be given a renowned, secure and free professional email address with 30 GB of space e.g. johnhall@globaljournals.org. This will include Webmail, Spam Assassin, Email Forwarders, Auto-Responders, Email Delivery Route tracing, etc.

We shall provide you intimation regarding launching of e-version of journal of your stream time to time. This may be utilized in your library for the enrichment of knowledge of your students as well as it can also be helpful for the concerned faculty members.

The MARSHS member can apply for approval, grading and certification of standards of their educational and Institutional Degrees to Open Association of Research, Society U.S.A.

Once you are designated as MARSHS, you may send us a scanned copy of all of your credentials. OARS will verify, grade and certify them. This will be based on your academic records, quality of research papers published by you, and some more criteria.

It is mandatory to read all terms and conditions carefully.

AUXILIARY MEMBERSHIPS

Institutional Fellow of Open Association of Research Society (USA) - OARS (USA)

Global Journals Incorporation (USA) is accredited by Open Association of Research Society, U.S.A (OARS) and in turn, affiliates research institutions as “Institutional Fellow of Open Association of Research Society” (IFOARS).

The “FARSC” is a dignified title which is accorded to a person’s name viz. Dr. John E. Hall, Ph.D., FARSC or William Walldroff, M.S., FARSC.

The IFOARS institution is entitled to form a Board comprised of one Chairperson and three to five board members preferably from different streams. The Board will be recognized as “Institutional Board of Open Association of Research Society”-(IBOARS).

The Institute will be entitled to following benefits:

The IBOARS can initially review research papers of their institute and recommend them to publish with respective journal of Global Journals. It can also review the papers of other institutions after obtaining our consent. The second review will be done by peer reviewer of Global Journals Incorporation (USA) The Board is at liberty to appoint a peer reviewer with the approval of chairperson after consulting us.

The author fees of such paper may be waived off up to 40%.

The Global Journals Incorporation (USA) at its discretion can also refer double blind peer reviewed paper at their end to the board for the verification and to get recommendation for final stage of acceptance of publication.

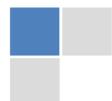

The IBOARS can organize symposium/seminar/conference in their country on behalf of Global Journals Incorporation (USA)-OARS (USA). The terms and conditions can be discussed separately.

The Board can also play vital role by exploring and giving valuable suggestions regarding the Standards of “Open Association of Research Society, U.S.A (OARS)” so that proper amendment can take place for the benefit of entire research community. We shall provide details of particular standard only on receipt of request from the Board.

The board members can also join us as Individual Fellow with 40% discount on total fees applicable to Individual Fellow. They will be entitled to avail all the benefits as declared. Please visit Individual Fellow-sub menu of GlobalJournals.org to have more relevant details.

We shall provide you intimation regarding launching of e-version of journal of your stream time to time. This may be utilized in your library for the enrichment of knowledge of your students as well as it can also be helpful for the concerned faculty members.

After nomination of your institution as “Institutional Fellow” and constantly functioning successfully for one year, we can consider giving recognition to your institute to function as Regional/Zonal office on our behalf. The board can also take up the additional allied activities for betterment after our consultation.

The following entitlements are applicable to individual Fellows:

Open Association of Research Society, U.S.A (OARS) By-laws states that an individual Fellow may use the designations as applicable, or the corresponding initials. The Credentials of individual Fellow and Associate designations signify that the individual has gained knowledge of the fundamental concepts. One is magnanimous and proficient in an expertise course covering the professional code of conduct, and follows recognized standards of practice.

Open Association of Research Society (US)/ Global Journals Incorporation (USA), as described in Corporate Statements, are educational, research publishing and professional membership organizations. Achieving our individual Fellow or Associate status is based mainly on meeting stated educational research requirements.

Disbursement of 40% Royalty earned through Global Journals : Researcher = 50%, Peer Reviewer = 37.50%, Institution = 12.50% E.g. Out of 40%, the 20% benefit should be passed on to researcher, 15 % benefit towards remuneration should be given to a reviewer and remaining 5% is to be retained by the institution.

We shall provide print version of 12 issues of any three journals [as per your requirement] out of our 38 journals worth \$ 2376 USD.

Other:

The individual Fellow and Associate designations accredited by Open Association of Research Society (US) credentials signify guarantees following achievements:

- The professional accredited with Fellow honor, is entitled to various benefits viz. name, fame, honor, regular flow of income, secured bright future, social status etc.

- In addition to above, if one is single author, then entitled to 40% discount on publishing research paper and can get 10% discount if one is co-author or main author among group of authors.
- The Fellow can organize symposium/seminar/conference on behalf of Global Journals Incorporation (USA) and he/she can also attend the same organized by other institutes on behalf of Global Journals.
- The Fellow can become member of Editorial Board Member after completing 3yrs.
- The Fellow can earn 60% of sales proceeds from the sale of reference/review books/literature/publishing of research paper.
- Fellow can also join as paid peer reviewer and earn 15% remuneration of author charges and can also get an opportunity to join as member of the Editorial Board of Global Journals Incorporation (USA)
- • This individual has learned the basic methods of applying those concepts and techniques to common challenging situations. This individual has further demonstrated an in-depth understanding of the application of suitable techniques to a particular area of research practice.

Note :

//

- In future, if the board feels the necessity to change any board member, the same can be done with the consent of the chairperson along with anyone board member without our approval.
- In case, the chairperson needs to be replaced then consent of 2/3rd board members are required and they are also required to jointly pass the resolution copy of which should be sent to us. In such case, it will be compulsory to obtain our approval before replacement.
- In case of “Difference of Opinion [if any]” among the Board members, our decision will be final and binding to everyone.

//

PROCESS OF SUBMISSION OF RESEARCH PAPER

The Area or field of specialization may or may not be of any category as mentioned in 'Scope of Journal' menu of the GlobalJournals.org website. There are 37 Research Journal categorized with Six parental Journals GJCST, GJMR, GJRE, GJMBR, GJSFR, GJHSS. For Authors should prefer the mentioned categories. There are three widely used systems UDC, DDC and LCC. The details are available as 'Knowledge Abstract' at Home page. The major advantage of this coding is that, the research work will be exposed to and shared with all over the world as we are being abstracted and indexed worldwide.

The paper should be in proper format. The format can be downloaded from first page of 'Author Guideline' Menu. The Author is expected to follow the general rules as mentioned in this menu. The paper should be written in MS-Word Format (*.DOC, *.DOCX).

The Author can submit the paper either online or offline. The authors should prefer online submission. Online Submission: There are three ways to submit your paper:

(A) (I) First, register yourself using top right corner of Home page then Login. If you are already registered, then login using your username and password.

(II) Choose corresponding Journal.

(III) Click 'Submit Manuscript'. Fill required information and Upload the paper.

(B) If you are using Internet Explorer, then Direct Submission through Homepage is also available.

(C) If these two are not convenient, and then email the paper directly to dean@globaljournals.org.

Offline Submission: Author can send the typed form of paper by Post. However, online submission should be preferred.

PREFERRED AUTHOR GUIDELINES

MANUSCRIPT STYLE INSTRUCTION (Must be strictly followed)

Page Size: 8.27" X 11"

- Left Margin: 0.65
- Right Margin: 0.65
- Top Margin: 0.75
- Bottom Margin: 0.75
- Font type of all text should be Swis 721 Lt BT.
- Paper Title should be of Font Size 24 with one Column section.
- Author Name in Font Size of 11 with one column as of Title.
- Abstract Font size of 9 Bold, "Abstract" word in Italic Bold.
- Main Text: Font size 10 with justified two columns section
- Two Column with Equal Column with of 3.38 and Gaping of .2
- First Character must be three lines Drop capped.
- Paragraph before Spacing of 1 pt and After of 0 pt.
- Line Spacing of 1 pt
- Large Images must be in One Column
- Numbering of First Main Headings (Heading 1) must be in Roman Letters, Capital Letter, and Font Size of 10.
- Numbering of Second Main Headings (Heading 2) must be in Alphabets, Italic, and Font Size of 10.

You can use your own standard format also.

Author Guidelines:

1. General,
2. Ethical Guidelines,
3. Submission of Manuscripts,
4. Manuscript's Category,
5. Structure and Format of Manuscript,
6. After Acceptance.

1. GENERAL

Before submitting your research paper, one is advised to go through the details as mentioned in following heads. It will be beneficial, while peer reviewer justify your paper for publication.

Scope

The Global Journals Inc. (US) welcome the submission of original paper, review paper, survey article relevant to the all the streams of Philosophy and knowledge. The Global Journals Inc. (US) is parental platform for Global Journal of Computer Science and Technology, Researches in Engineering, Medical Research, Science Frontier Research, Human Social Science, Management, and Business organization. The choice of specific field can be done otherwise as following in Abstracting and Indexing Page on this Website. As the all Global

Journals Inc. (US) are being abstracted and indexed (in process) by most of the reputed organizations. Topics of only narrow interest will not be accepted unless they have wider potential or consequences.

2. ETHICAL GUIDELINES

Authors should follow the ethical guidelines as mentioned below for publication of research paper and research activities.

Papers are accepted on strict understanding that the material in whole or in part has not been, nor is being, considered for publication elsewhere. If the paper once accepted by Global Journals Inc. (US) and Editorial Board, will become the copyright of the Global Journals Inc. (US).

Authorship: The authors and coauthors should have active contribution to conception design, analysis and interpretation of findings. They should critically review the contents and drafting of the paper. All should approve the final version of the paper before submission

The Global Journals Inc. (US) follows the definition of authorship set up by the Global Academy of Research and Development. According to the Global Academy of R&D authorship, criteria must be based on:

- 1) Substantial contributions to conception and acquisition of data, analysis and interpretation of the findings.
- 2) Drafting the paper and revising it critically regarding important academic content.
- 3) Final approval of the version of the paper to be published.

All authors should have been credited according to their appropriate contribution in research activity and preparing paper. Contributors who do not match the criteria as authors may be mentioned under Acknowledgement.

Acknowledgements: Contributors to the research other than authors credited should be mentioned under acknowledgement. The specifications of the source of funding for the research if appropriate can be included. Suppliers of resources may be mentioned along with address.

Appeal of Decision: The Editorial Board's decision on publication of the paper is final and cannot be appealed elsewhere.

Permissions: It is the author's responsibility to have prior permission if all or parts of earlier published illustrations are used in this paper.

Please mention proper reference and appropriate acknowledgements wherever expected.

If all or parts of previously published illustrations are used, permission must be taken from the copyright holder concerned. It is the author's responsibility to take these in writing.

Approval for reproduction/modification of any information (including figures and tables) published elsewhere must be obtained by the authors/copyright holders before submission of the manuscript. Contributors (Authors) are responsible for any copyright fee involved.

3. SUBMISSION OF MANUSCRIPTS

Manuscripts should be uploaded via this online submission page. The online submission is most efficient method for submission of papers, as it enables rapid distribution of manuscripts and consequently speeds up the review procedure. It also enables authors to know the status of their own manuscripts by emailing us. Complete instructions for submitting a paper is available below.

Manuscript submission is a systematic procedure and little preparation is required beyond having all parts of your manuscript in a given format and a computer with an Internet connection and a Web browser. Full help and instructions are provided on-screen. As an author, you will be prompted for login and manuscript details as Field of Paper and then to upload your manuscript file(s) according to the instructions.

To avoid postal delays, all transaction is preferred by e-mail. A finished manuscript submission is confirmed by e-mail immediately and your paper enters the editorial process with no postal delays. When a conclusion is made about the publication of your paper by our Editorial Board, revisions can be submitted online with the same procedure, with an occasion to view and respond to all comments.

Complete support for both authors and co-author is provided.

4. MANUSCRIPT'S CATEGORY

Based on potential and nature, the manuscript can be categorized under the following heads:

Original research paper: Such papers are reports of high-level significant original research work.

Review papers: These are concise, significant but helpful and decisive topics for young researchers.

Research articles: These are handled with small investigation and applications

Research letters: The letters are small and concise comments on previously published matters.

5. STRUCTURE AND FORMAT OF MANUSCRIPT

The recommended size of original research paper is less than seven thousand words, review papers fewer than seven thousands words also. Preparation of research paper or how to write research paper, are major hurdle, while writing manuscript. The research articles and research letters should be fewer than three thousand words, the structure original research paper; sometime review paper should be as follows:

Papers: These are reports of significant research (typically less than 7000 words equivalent, including tables, figures, references), and comprise:

(a) Title should be relevant and commensurate with the theme of the paper.

(b) A brief Summary, "Abstract" (less than 150 words) containing the major results and conclusions.

(c) Up to ten keywords, that precisely identifies the paper's subject, purpose, and focus.

(d) An Introduction, giving necessary background excluding subheadings; objectives must be clearly declared.

(e) Resources and techniques with sufficient complete experimental details (wherever possible by reference) to permit repetition; sources of information must be given and numerical methods must be specified by reference, unless non-standard.

(f) Results should be presented concisely, by well-designed tables and/or figures; the same data may not be used in both; suitable statistical data should be given. All data must be obtained with attention to numerical detail in the planning stage. As reproduced design has been recognized to be important to experiments for a considerable time, the Editor has decided that any paper that appears not to have adequate numerical treatments of the data will be returned un-refereed;

(g) Discussion should cover the implications and consequences, not just recapitulating the results; conclusions should be summarizing.

(h) Brief Acknowledgements.

(i) References in the proper form.

Authors should very cautiously consider the preparation of papers to ensure that they communicate efficiently. Papers are much more likely to be accepted, if they are cautiously designed and laid out, contain few or no errors, are summarizing, and be conventional to the approach and instructions. They will in addition, be published with much less delays than those that require much technical and editorial correction.

The Editorial Board reserves the right to make literary corrections and to make suggestions to improve brevity.

It is vital, that authors take care in submitting a manuscript that is written in simple language and adheres to published guidelines.

Format

Language: The language of publication is UK English. Authors, for whom English is a second language, must have their manuscript efficiently edited by an English-speaking person before submission to make sure that, the English is of high excellence. It is preferable, that manuscripts should be professionally edited.

Standard Usage, Abbreviations, and Units: Spelling and hyphenation should be conventional to The Concise Oxford English Dictionary. Statistics and measurements should at all times be given in figures, e.g. 16 min, except for when the number begins a sentence. When the number does not refer to a unit of measurement it should be spelt in full unless, it is 160 or greater.

Abbreviations supposed to be used carefully. The abbreviated name or expression is supposed to be cited in full at first usage, followed by the conventional abbreviation in parentheses.

Metric SI units are supposed to generally be used excluding where they conflict with current practice or are confusing. For illustration, 1.4 l rather than $1.4 \times 10^{-3} \text{ m}^3$, or 4 mm somewhat than $4 \times 10^{-3} \text{ m}$. Chemical formula and solutions must identify the form used, e.g. anhydrous or hydrated, and the concentration must be in clearly defined units. Common species names should be followed by underlines at the first mention. For following use the generic name should be constricted to a single letter, if it is clear.

Structure

All manuscripts submitted to Global Journals Inc. (US), ought to include:

Title: The title page must carry an instructive title that reflects the content, a running title (less than 45 characters together with spaces), names of the authors and co-authors, and the place(s) wherever the work was carried out. The full postal address in addition with the e-mail address of related author must be given. Up to eleven keywords or very brief phrases have to be given to help data retrieval, mining and indexing.

Abstract, used in Original Papers and Reviews:

Optimizing Abstract for Search Engines

Many researchers searching for information online will use search engines such as Google, Yahoo or similar. By optimizing your paper for search engines, you will amplify the chance of someone finding it. This in turn will make it more likely to be viewed and/or cited in a further work. Global Journals Inc. (US) have compiled these guidelines to facilitate you to maximize the web-friendliness of the most public part of your paper.

Key Words

A major linchpin in research work for the writing research paper is the keyword search, which one will employ to find both library and Internet resources.

One must be persistent and creative in using keywords. An effective keyword search requires a strategy and planning a list of possible keywords and phrases to try.

Search engines for most searches, use Boolean searching, which is somewhat different from Internet searches. The Boolean search uses "operators," words (and, or, not, and near) that enable you to expand or narrow your affords. Tips for research paper while preparing research paper are very helpful guideline of research paper.

Choice of key words is first tool of tips to write research paper. Research paper writing is an art. A few tips for deciding as strategically as possible about keyword search:

- One should start brainstorming lists of possible keywords before even begin searching. Think about the most important concepts related to research work. Ask, "What words would a source have to include to be truly valuable in research paper?" Then consider synonyms for the important words.
- It may take the discovery of only one relevant paper to let steer in the right keyword direction because in most databases, the keywords under which a research paper is abstracted are listed with the paper.
- One should avoid outdated words.

Keywords are the key that opens a door to research work sources. Keyword searching is an art in which researcher's skills are bound to improve with experience and time.

Numerical Methods: Numerical methods used should be clear and, where appropriate, supported by references.

Acknowledgements: Please make these as concise as possible.

References

References follow the Harvard scheme of referencing. References in the text should cite the authors' names followed by the time of their publication, unless there are three or more authors when simply the first author's name is quoted followed by et al. unpublished work has to only be cited where necessary, and only in the text. Copies of references in press in other journals have to be supplied with submitted typescripts. It is necessary that all citations and references be carefully checked before submission, as mistakes or omissions will cause delays.

References to information on the World Wide Web can be given, but only if the information is available without charge to readers on an official site. Wikipedia and Similar websites are not allowed where anyone can change the information. Authors will be asked to make available electronic copies of the cited information for inclusion on the Global Journals Inc. (US) homepage at the judgment of the Editorial Board.

The Editorial Board and Global Journals Inc. (US) recommend that, citation of online-published papers and other material should be done via a DOI (digital object identifier). If an author cites anything, which does not have a DOI, they run the risk of the cited material not being noticeable.

The Editorial Board and Global Journals Inc. (US) recommend the use of a tool such as Reference Manager for reference management and formatting.

Tables, Figures and Figure Legends

Tables: Tables should be few in number, cautiously designed, uncrowned, and include only essential data. Each must have an Arabic number, e.g. Table 4, a self-explanatory caption and be on a separate sheet. Vertical lines should not be used.

Figures: Figures are supposed to be submitted as separate files. Always take in a citation in the text for each figure using Arabic numbers, e.g. Fig. 4. Artwork must be submitted online in electronic form by e-mailing them.

Preparation of Electronic Figures for Publication

Even though low quality images are sufficient for review purposes, print publication requires high quality images to prevent the final product being blurred or fuzzy. Submit (or e-mail) EPS (line art) or TIFF (halftone/photographs) files only. MS PowerPoint and Word Graphics are unsuitable for printed pictures. Do not use pixel-oriented software. Scans (TIFF only) should have a resolution of at least 350 dpi (halftone) or 700 to 1100 dpi (line drawings) in relation to the imitation size. Please give the data for figures in black and white or submit a Color Work Agreement Form. EPS files must be saved with fonts embedded (and with a TIFF preview, if possible).

For scanned images, the scanning resolution (at final image size) ought to be as follows to ensure good reproduction: line art: >650 dpi; halftones (including gel photographs) : >350 dpi; figures containing both halftone and line images: >650 dpi.

Color Charges: It is the rule of the Global Journals Inc. (US) for authors to pay the full cost for the reproduction of their color artwork. Hence, please note that, if there is color artwork in your manuscript when it is accepted for publication, we would require you to complete and return a color work agreement form before your paper can be published.

Figure Legends: Self-explanatory legends of all figures should be incorporated separately under the heading 'Legends to Figures'. In the full-text online edition of the journal, figure legends may possibly be truncated in abbreviated links to the full screen version. Therefore, the first 100 characters of any legend should notify the reader, about the key aspects of the figure.

6. AFTER ACCEPTANCE

Upon approval of a paper for publication, the manuscript will be forwarded to the dean, who is responsible for the publication of the Global Journals Inc. (US).

6.1 Proof Corrections

The corresponding author will receive an e-mail alert containing a link to a website or will be attached. A working e-mail address must therefore be provided for the related author.

Acrobat Reader will be required in order to read this file. This software can be downloaded

(Free of charge) from the following website:

www.adobe.com/products/acrobat/readstep2.html. This will facilitate the file to be opened, read on screen, and printed out in order for any corrections to be added. Further instructions will be sent with the proof.

Proofs must be returned to the dean at dean@globaljournals.org within three days of receipt.

As changes to proofs are costly, we inquire that you only correct typesetting errors. All illustrations are retained by the publisher. Please note that the authors are responsible for all statements made in their work, including changes made by the copy editor.

6.2 Early View of Global Journals Inc. (US) (Publication Prior to Print)

The Global Journals Inc. (US) are enclosed by our publishing's Early View service. Early View articles are complete full-text articles sent in advance of their publication. Early View articles are absolute and final. They have been completely reviewed, revised and edited for publication, and the authors' final corrections have been incorporated. Because they are in final form, no changes can be made after sending them. The nature of Early View articles means that they do not yet have volume, issue or page numbers, so Early View articles cannot be cited in the conventional way.

6.3 Author Services

Online production tracking is available for your article through Author Services. Author Services enables authors to track their article - once it has been accepted - through the production process to publication online and in print. Authors can check the status of their articles online and choose to receive automated e-mails at key stages of production. The authors will receive an e-mail with a unique link that enables them to register and have their article automatically added to the system. Please ensure that a complete e-mail address is provided when submitting the manuscript.

6.4 Author Material Archive Policy

Please note that if not specifically requested, publisher will dispose off hardcopy & electronic information submitted, after the two months of publication. If you require the return of any information submitted, please inform the Editorial Board or dean as soon as possible.

6.5 Offprint and Extra Copies

A PDF offprint of the online-published article will be provided free of charge to the related author, and may be distributed according to the Publisher's terms and conditions. Additional paper offprint may be ordered by emailing us at: editor@globaljournals.org .

Before start writing a good quality Computer Science Research Paper, let us first understand what is Computer Science Research Paper? So, Computer Science Research Paper is the paper which is written by professionals or scientists who are associated to Computer Science and Information Technology, or doing research study in these areas. If you are novel to this field then you can consult about this field from your supervisor or guide.

TECHNIQUES FOR WRITING A GOOD QUALITY RESEARCH PAPER:

1. Choosing the topic: In most cases, the topic is searched by the interest of author but it can be also suggested by the guides. You can have several topics and then you can judge that in which topic or subject you are finding yourself most comfortable. This can be done by asking several questions to yourself, like Will I be able to carry our search in this area? Will I find all necessary recourses to accomplish the search? Will I be able to find all information in this field area? If the answer of these types of questions will be "Yes" then you can choose that topic. In most of the cases, you may have to conduct the surveys and have to visit several places because this field is related to Computer Science and Information Technology. Also, you may have to do a lot of work to find all rise and falls regarding the various data of that subject. Sometimes, detailed information plays a vital role, instead of short information.

2. Evaluators are human: First thing to remember that evaluators are also human being. They are not only meant for rejecting a paper. They are here to evaluate your paper. So, present your Best.

3. Think Like Evaluators: If you are in a confusion or getting demotivated that your paper will be accepted by evaluators or not, then think and try to evaluate your paper like an Evaluator. Try to understand that what an evaluator wants in your research paper and automatically you will have your answer.

4. Make blueprints of paper: The outline is the plan or framework that will help you to arrange your thoughts. It will make your paper logical. But remember that all points of your outline must be related to the topic you have chosen.

5. Ask your Guides: If you are having any difficulty in your research, then do not hesitate to share your difficulty to your guide (if you have any). They will surely help you out and resolve your doubts. If you can't clarify what exactly you require for your work then ask the supervisor to help you with the alternative. He might also provide you the list of essential readings.

6. Use of computer is recommended: As you are doing research in the field of Computer Science, then this point is quite obvious.

7. Use right software: Always use good quality software packages. If you are not capable to judge good software then you can lose quality of your paper unknowingly. There are various software programs available to help you, which you can get through Internet.

8. Use the Internet for help: An excellent start for your paper can be by using the Google. It is an excellent search engine, where you can have your doubts resolved. You may also read some answers for the frequent question how to write my research paper or find model research paper. From the internet library you can download books. If you have all required books make important reading selecting and analyzing the specified information. Then put together research paper sketch out.

9. Use and get big pictures: Always use encyclopedias, Wikipedia to get pictures so that you can go into the depth.

10. Bookmarks are useful: When you read any book or magazine, you generally use bookmarks, right! It is a good habit, which helps to not to lose your continuity. You should always use bookmarks while searching on Internet also, which will make your search easier.

11. Revise what you wrote: When you write anything, always read it, summarize it and then finalize it.

12. Make all efforts: Make all efforts to mention what you are going to write in your paper. That means always have a good start. Try to mention everything in introduction, that what is the need of a particular research paper. Polish your work by good skill of writing and always give an evaluator, what he wants.

13. Have backups: When you are going to do any important thing like making research paper, you should always have backup copies of it either in your computer or in paper. This will help you to not to lose any of your important.

14. Produce good diagrams of your own: Always try to include good charts or diagrams in your paper to improve quality. Using several and unnecessary diagrams will degrade the quality of your paper by creating "hotchpotch." So always, try to make and include those diagrams, which are made by your own to improve readability and understandability of your paper.

15. Use of direct quotes: When you do research relevant to literature, history or current affairs then use of quotes become essential but if study is relevant to science then use of quotes is not preferable.

16. Use proper verb tense: Use proper verb tenses in your paper. Use past tense, to present those events that happened. Use present tense to indicate events that are going on. Use future tense to indicate future happening events. Use of improper and wrong tenses will confuse the evaluator. Avoid the sentences that are incomplete.

17. Never use online paper: If you are getting any paper on Internet, then never use it as your research paper because it might be possible that evaluator has already seen it or maybe it is outdated version.

18. Pick a good study spot: To do your research studies always try to pick a spot, which is quiet. Every spot is not for studies. Spot that suits you choose it and proceed further.

19. Know what you know: Always try to know, what you know by making objectives. Else, you will be confused and cannot achieve your target.

20. Use good quality grammar: Always use a good quality grammar and use words that will throw positive impact on evaluator. Use of good quality grammar does not mean to use tough words, that for each word the evaluator has to go through dictionary. Do not start sentence with a conjunction. Do not fragment sentences. Eliminate one-word sentences. Ignore passive voice. Do not ever use a big word when a diminutive one would suffice. Verbs have to be in agreement with their subjects. Prepositions are not expressions to finish sentences with. It is incorrect to ever divide an infinitive. Avoid clichés like the disease. Also, always shun irritating alliteration. Use language that is simple and straight forward. put together a neat summary.

21. Arrangement of information: Each section of the main body should start with an opening sentence and there should be a changeover at the end of the section. Give only valid and powerful arguments to your topic. You may also maintain your arguments with records.

22. Never start in last minute: Always start at right time and give enough time to research work. Leaving everything to the last minute will degrade your paper and spoil your work.

23. Multitasking in research is not good: Doing several things at the same time proves bad habit in case of research activity. Research is an area, where everything has a particular time slot. Divide your research work in parts and do particular part in particular time slot.

24. Never copy others' work: Never copy others' work and give it your name because if evaluator has seen it anywhere you will be in trouble.

25. Take proper rest and food: No matter how many hours you spend for your research activity, if you are not taking care of your health then all your efforts will be in vain. For a quality research, study is must, and this can be done by taking proper rest and food.

26. Go for seminars: Attend seminars if the topic is relevant to your research area. Utilize all your resources.

27. Refresh your mind after intervals: Try to give rest to your mind by listening to soft music or by sleeping in intervals. This will also improve your memory.

28. Make colleagues: Always try to make colleagues. No matter how sharper or intelligent you are, if you make colleagues you can have several ideas, which will be helpful for your research.

29. Think technically: Always think technically. If anything happens, then search its reasons, its benefits, and demerits.

30. Think and then print: When you will go to print your paper, notice that tables are not be split, headings are not detached from their descriptions, and page sequence is maintained.

31. Adding unnecessary information: Do not add unnecessary information, like, I have used MS Excel to draw graph. Do not add irrelevant and inappropriate material. These all will create superfluous. Foreign terminology and phrases are not apropos. One should NEVER take a broad view. Analogy in script is like feathers on a snake. Not at all use a large word when a very small one would be sufficient. Use words properly, regardless of how others use them. Remove quotations. Puns are for kids, not grunt readers. Amplification is a billion times of inferior quality than sarcasm.

32. Never oversimplify everything: To add material in your research paper, never go for oversimplification. This will definitely irritate the evaluator. Be more or less specific. Also too, by no means, ever use rhythmic redundancies. Contractions aren't essential and shouldn't be there used. Comparisons are as terrible as clichés. Give up ampersands and abbreviations, and so on. Remove commas, that are, not necessary. Parenthetical words however should be together with this in commas. Understatement is all the time the complete best way to put onward earth-shaking thoughts. Give a detailed literary review.

33. Report concluded results: Use concluded results. From raw data, filter the results and then conclude your studies based on measurements and observations taken. Significant figures and appropriate number of decimal places should be used. Parenthetical remarks are prohibitive. Proofread carefully at final stage. In the end give outline to your arguments. Spot out perspectives of further study of this subject. Justify your conclusion by at the bottom of them with sufficient justifications and examples.

34. After conclusion: Once you have concluded your research, the next most important step is to present your findings. Presentation is extremely important as it is the definite medium through which your research is going to be in print to the rest of the crowd. Care should be taken to categorize your thoughts well and present them in a logical and neat manner. A good quality research paper format is essential because it serves to highlight your research paper and bring to light all necessary aspects in your research.

INFORMAL GUIDELINES OF RESEARCH PAPER WRITING

Key points to remember:

- Submit all work in its final form.
- Write your paper in the form, which is presented in the guidelines using the template.
- Please note the criterion for grading the final paper by peer-reviewers.

Final Points:

A purpose of organizing a research paper is to let people to interpret your effort selectively. The journal requires the following sections, submitted in the order listed, each section to start on a new page.

The introduction will be compiled from reference matter and will reflect the design processes or outline of basis that direct you to make study. As you will carry out the process of study, the method and process section will be constructed as like that. The result segment will show related statistics in nearly sequential order and will direct the reviewers next to the similar intellectual paths throughout the data that you took to carry out your study. The discussion section will provide understanding of the data and projections as to the implication of the results. The use of good quality references all through the paper will give the effort trustworthiness by representing an alertness of prior workings.

Writing a research paper is not an easy job no matter how trouble-free the actual research or concept. Practice, excellent preparation, and controlled record keeping are the only means to make straightforward the progression.

General style:

Specific editorial column necessities for compliance of a manuscript will always take over from directions in these general guidelines.

To make a paper clear

- Adhere to recommended page limits

Mistakes to evade

- Insertion a title at the foot of a page with the subsequent text on the next page
- Separating a table/chart or figure - impound each figure/table to a single page
- Submitting a manuscript with pages out of sequence

In every sections of your document

- Use standard writing style including articles ("a", "the," etc.)
- Keep on paying attention on the research topic of the paper
- Use paragraphs to split each significant point (excluding for the abstract)
- Align the primary line of each section
- Present your points in sound order
- Use present tense to report well accepted
- Use past tense to describe specific results
- Shun familiar wording, don't address the reviewer directly, and don't use slang, slang language, or superlatives
- Shun use of extra pictures - include only those figures essential to presenting results

Title Page:

Choose a revealing title. It should be short. It should not have non-standard acronyms or abbreviations. It should not exceed two printed lines. It should include the name(s) and address (es) of all authors.

Abstract:

The summary should be two hundred words or less. It should briefly and clearly explain the key findings reported in the manuscript-- must have precise statistics. It should not have abnormal acronyms or abbreviations. It should be logical in itself. Shun citing references at this point.

An abstract is a brief distinct paragraph summary of finished work or work in development. In a minute or less a reviewer can be taught the foundation behind the study, common approach to the problem, relevant results, and significant conclusions or new questions.

Write your summary when your paper is completed because how can you write the summary of anything which is not yet written? Wealth of terminology is very essential in abstract. Yet, use comprehensive sentences and do not let go readability for brevity. You can maintain it succinct by phrasing sentences so that they provide more than lone rationale. The author can at this moment go straight to shortening the outcome. Sum up the study, with the subsequent elements in any summary. Try to maintain the initial two items to no more than one ruling each.

- Reason of the study - theory, overall issue, purpose
- Fundamental goal
- To the point depiction of the research
- Consequences, including definite statistics - if the consequences are quantitative in nature, account quantitative data; results of any numerical analysis should be reported
- Significant conclusions or questions that track from the research(es)

Approach:

- Single section, and succinct
- As an outline of job done, it is always written in past tense
- A conceptual should situate on its own, and not submit to any other part of the paper such as a form or table
- Center on shortening results - bound background information to a verdict or two, if completely necessary
- What you account in an abstract must be regular with what you reported in the manuscript
- Exact spelling, clearness of sentences and phrases, and appropriate reporting of quantities (proper units, important statistics) are just as significant in an abstract as they are anywhere else

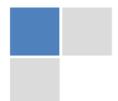

Introduction:

The **Introduction** should "introduce" the manuscript. The reviewer should be presented with sufficient background information to be capable to comprehend and calculate the purpose of your study without having to submit to other works. The basis for the study should be offered. Give most important references but shun difficult to make a comprehensive appraisal of the topic. In the introduction, describe the problem visibly. If the problem is not acknowledged in a logical, reasonable way, the reviewer will have no attention in your result. Speak in common terms about techniques used to explain the problem, if needed, but do not present any particulars about the protocols here. Following approach can create a valuable beginning:

- Explain the value (significance) of the study
- Shield the model - why did you employ this particular system or method? What is its compensation? You strength remark on its appropriateness from a abstract point of vision as well as point out sensible reasons for using it.
- Present a justification. Status your particular theory (es) or aim(s), and describe the logic that led you to choose them.
- Very for a short time explain the tentative propose and how it skilled the declared objectives.

Approach:

- Use past tense except for when referring to recognized facts. After all, the manuscript will be submitted after the entire job is done.
- Sort out your thoughts; manufacture one key point with every section. If you make the four points listed above, you will need a least of four paragraphs.

- Present surroundings information only as desirable in order hold up a situation. The reviewer does not desire to read the whole thing you know about a topic.
- Shape the theory/purpose specifically - do not take a broad view.
- As always, give awareness to spelling, simplicity and correctness of sentences and phrases.

Procedures (Methods and Materials):

This part is supposed to be the easiest to carve if you have good skills. A sound written Procedures segment allows a capable scientist to replacement your results. Present precise information about your supplies. The suppliers and clarity of reagents can be helpful bits of information. Present methods in sequential order but linked methodologies can be grouped as a segment. Be concise when relating the protocols. Attempt for the least amount of information that would permit another capable scientist to spare your outcome but be cautious that vital information is integrated. The use of subheadings is suggested and ought to be synchronized with the results section. When a technique is used that has been well described in another object, mention the specific item describing a way but draw the basic principle while stating the situation. The purpose is to text all particular resources and broad procedures, so that another person may use some or all of the methods in one more study or referee the scientific value of your work. It is not to be a step by step report of the whole thing you did, nor is a methods section a set of orders.

Materials:

- Explain materials individually only if the study is so complex that it saves liberty this way.
- Embrace particular materials, and any tools or provisions that are not frequently found in laboratories.
- Do not take in frequently found.
- If use of a definite type of tools.
- Materials may be reported in a part section or else they may be recognized along with your measures.

Methods:

- Report the method (not particulars of each process that engaged the same methodology)
- Describe the method entirely
- To be succinct, present methods under headings dedicated to specific dealings or groups of measures
- Simplify - details how procedures were completed not how they were exclusively performed on a particular day.
- If well known procedures were used, account the procedure by name, possibly with reference, and that's all.

Approach:

- It is embarrassed or not possible to use vigorous voice when documenting methods with no using first person, which would focus the reviewer's interest on the researcher rather than the job. As a result when script up the methods most authors use third person passive voice.
- Use standard style in this and in every other part of the paper - avoid familiar lists, and use full sentences.

What to keep away from

- Resources and methods are not a set of information.
- Skip all descriptive information and surroundings - save it for the argument.
- Leave out information that is immaterial to a third party.

Results:

The principle of a results segment is to present and demonstrate your conclusion. Create this part a entirely objective details of the outcome, and save all understanding for the discussion.

The page length of this segment is set by the sum and types of data to be reported. Carry on to be to the point, by means of statistics and tables, if suitable, to present consequences most efficiently. You must obviously differentiate material that would usually be incorporated in a study editorial from any unprocessed data or additional appendix matter that would not be available. In fact, such matter should not be submitted at all except requested by the instructor.

Content

- Sum up your conclusion in text and demonstrate them, if suitable, with figures and tables.
- In manuscript, explain each of your consequences, point the reader to remarks that are most appropriate.
- Present a background, such as by describing the question that was addressed by creation an exacting study.
- Explain results of control experiments and comprise remarks that are not accessible in a prescribed figure or table, if appropriate.
- Examine your data, then prepare the analyzed (transformed) data in the form of a figure (graph), table, or in manuscript form.

What to stay away from

- Do not discuss or infer your outcome, report surroundings information, or try to explain anything.
- Not at all, take in raw data or intermediate calculations in a research manuscript.
- Do not present the similar data more than once.
- Manuscript should complement any figures or tables, not duplicate the identical information.
- Never confuse figures with tables - there is a difference.

Approach

- As forever, use past tense when you submit to your results, and put the whole thing in a reasonable order.
- Put figures and tables, appropriately numbered, in order at the end of the report
- If you desire, you may place your figures and tables properly within the text of your results part.

Figures and tables

- If you put figures and tables at the end of the details, make certain that they are visibly distinguished from any attach appendix materials, such as raw facts
- Despite of position, each figure must be numbered one after the other and complete with subtitle
- In spite of position, each table must be titled, numbered one after the other and complete with heading
- All figure and table must be adequately complete that it could situate on its own, divide from text

Discussion:

The Discussion is expected the trickiest segment to write and describe. A lot of papers submitted for journal are discarded based on problems with the Discussion. There is no head of state for how long a argument should be. Position your understanding of the outcome visibly to lead the reviewer through your conclusions, and then finish the paper with a summing up of the implication of the study. The purpose here is to offer an understanding of your results and hold up for all of your conclusions, using facts from your research and generally accepted information, if suitable. The implication of result should be visibly described. Infer your data in the conversation in suitable depth. This means that when you clarify an observable fact you must explain mechanisms that may account for the observation. If your results vary from your prospect, make clear why that may have happened. If your results agree, then explain the theory that the proof supported. It is never suitable to just state that the data approved with prospect, and let it drop at that.

- Make a decision if each premise is supported, discarded, or if you cannot make a conclusion with assurance. Do not just dismiss a study or part of a study as "uncertain."
- Research papers are not acknowledged if the work is imperfect. Draw what conclusions you can based upon the results that you have, and take care of the study as a finished work
- You may propose future guidelines, such as how the experiment might be personalized to accomplish a new idea.
- Give details all of your remarks as much as possible, focus on mechanisms.
- Make a decision if the tentative design sufficiently addressed the theory, and whether or not it was correctly restricted.
- Try to present substitute explanations if sensible alternatives be present.
- One research will not counter an overall question, so maintain the large picture in mind, where do you go next? The best studies unlock new avenues of study. What questions remain?
- Recommendations for detailed papers will offer supplementary suggestions.

Approach:

- When you refer to information, differentiate data generated by your own studies from available information
- Submit to work done by specific persons (including you) in past tense.
- Submit to generally acknowledged facts and main beliefs in present tense.

THE ADMINISTRATION RULES

Please carefully note down following rules and regulation before submitting your Research Paper to Global Journals Inc. (US):

Segment Draft and Final Research Paper: You have to strictly follow the template of research paper. If it is not done your paper may get rejected.

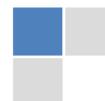

- The **major constraint** is that you must independently make all content, tables, graphs, and facts that are offered in the paper. You must write each part of the paper wholly on your own. The Peer-reviewers need to identify your own perceptives of the concepts in your own terms. NEVER extract straight from any foundation, and never rephrase someone else's analysis.
- Do not give permission to anyone else to "PROOFREAD" your manuscript.
- **Methods to avoid Plagiarism is applied by us on every paper, if found guilty, you will be blacklisted by all of our collaborated research groups, your institution will be informed for this and strict legal actions will be taken immediately.)**
- To guard yourself and others from possible illegal use please do not permit anyone right to use to your paper and files.

CRITERION FOR GRADING A RESEARCH PAPER (COMPILATION)
BY GLOBAL JOURNALS INC. (US)

Please note that following table is only a Grading of "Paper Compilation" and not on "Performed/Stated Research" whose grading solely depends on Individual Assigned Peer Reviewer and Editorial Board Member. These can be available only on request and after decision of Paper. This report will be the property of Global Journals Inc. (US).

Topics	Grades		
	A-B	C-D	E-F
<i>Abstract</i>	Clear and concise with appropriate content, Correct format. 200 words or below	Unclear summary and no specific data, Incorrect form Above 200 words	No specific data with ambiguous information Above 250 words
<i>Introduction</i>	Containing all background details with clear goal and appropriate details, flow specification, no grammar and spelling mistake, well organized sentence and paragraph, reference cited	Unclear and confusing data, appropriate format, grammar and spelling errors with unorganized matter	Out of place depth and content, hazy format
<i>Methods and Procedures</i>	Clear and to the point with well arranged paragraph, precision and accuracy of facts and figures, well organized subheads	Difficult to comprehend with embarrassed text, too much explanation but completed	Incorrect and unorganized structure with hazy meaning
<i>Result</i>	Well organized, Clear and specific, Correct units with precision, correct data, well structuring of paragraph, no grammar and spelling mistake	Complete and embarrassed text, difficult to comprehend	Irregular format with wrong facts and figures
<i>Discussion</i>	Well organized, meaningful specification, sound conclusion, logical and concise explanation, highly structured paragraph reference cited	Wordy, unclear conclusion, spurious	Conclusion is not cited, unorganized, difficult to comprehend
<i>References</i>	Complete and correct format, well organized	Beside the point, Incomplete	Wrong format and structuring
