Achievement Motivation among Executives and Technocrats

By Gauri Sharma & Dr. Anita Sharma

Himachal Pradesh University

Abstract- The present study aims to explain the significance of difference on achievement motivation between executives and technocrats. The sample comprised of 200 executives and 200 technocrats with equal number of both the genders, within the age range of 25-40 years. Data were gathered by using achievement motivation scale by Deo Mohan (1985). Findings indicated significant differences between executives and technocrats and males and females on achievement motivation. Results revealed that executives who are the planners of the organization are high on achievement motivation as compared to technocrats. Regarding gender, females showed more motive to achieve as compared to males. The importance of the current study lies in the fact that who is richer in n-Ach helping in subjective well being?

Keywords: *achievement motivation, executives, technocrats and gender.*

Abstract- The present study aims to explain the significance of difference on achievement motivation between executives and technocrats. The sample comprised of 200 executives and 200 technocrats with equal number of both the genders, within the age range of 25-40 years. Data were gathered by using achievement motivation scale by Deo Mohan (1985). Findings indicated significant differences between executives and technocrats and males and females on achievement motivation. Results revealed that executives who are the planners of the organization are high on achievement motivation as compared to technocrats. Regarding gender, females showed more motive to achieve as compared to males. The importance of the current study lies in the fact that who is richer in n-Ach helping in subjective well being?

Keywords: achievement motivation, executives, technocrats and gender.

I. INTRODUCTION

Motivation is the basic drive for all of our actions. Motivation refers to the dynamics of our behaviour, which involves our needs, desires, and ambitions in life. Motivation can be defined as the driving force behind all the actions of an individual. The influence of an individual's needs and desires both have a strong impact on the direction of his behaviour. Motivation is based on one's emotions and achievement-related goals. Individuals satisfy their needs through different means, and are driven to succeed for varying reasons both internal and external.

Achievement motivation is based on reaching success and achieving all of our aspirations in life. Achievement goals can affect the way a person performs a task and represent a desire to show competence (Harackiewicz, et al. 1997). These basic physiological motivational drives affect one's natural behaviour in different environments. Most of the goals are incentive-based and can vary from basic hunger to the need for love and the establishment of mature sexual relationships. Motives for achievement can range from biological needs to satisfying creative desires or realizing success in competitive ventures. Motivation is important because it affects one's lives every day. All of our behaviours, actions, thoughts, and beliefs are influenced by our inner drive to succeed.

Achievement motivation, referred to as the need for achievement (and abbreviated n-Ach), is an

important determinant of aspiration, effort, and persistence when an individual expects that his performance will be evaluated in relation to some standard of excellence. Such behaviour is called achievement-oriented. Achievement Motivation can be defined as the need for success or the attainment of excellence

Motivation to achieve is instigated when an individual knows that he is responsible for the outcome of some venture, when he anticipates explicit knowledge of results that will define his success or failure, and when there is some degree of risk, i.e., some uncertainty about the outcome of his effort. The goal of achievement-oriented activity is to succeed, to perform well in relation to a standard of excellence or in comparison with others who are competitors (McClelland, 1961 & Atkinson, 1964).

Individuals differ in their strength of motive to achieve, and various activities differ in the challenge they pose and the opportunity they offer for expression of this motive. Thus, both personality and environmental factors must be considered in accounting for the strength of motivation to achieve in a particular person facing a particular challenge in a particular situation. The very same person may be more strongly motivated at one time than at another time, even though in most situations he may generally tend to be more interested in achieving than other people.

McClelland firmly believed that achievement-motivated people are generally the ones who make things happen and get results, and that this extends to getting results through the organisation of other people and resources, although as stated earlier, they often demand too much of their staff because they prioritise achieving the goal above the many varied interests and needs of their people.

The present study is the pioneer attempt in India to study:

1. The significance of difference between executives and technocrats on achievement motivation.
2. The extent of difference that exist between male and female employees on achievement motivation.
3. The interaction effect of profession and gender.

II. METHODOLOGY

a) Participants

The target sample of the study were 200 executives and 200 technocrats with equal number of

Author ^α: Associate Professor & H.O.D. Department of Psychology, Himachal Pradesh University. e-mail: anitahpu@gmail.com

Author ^σ: Research Scholar Psychology Department of Psychology Himachal Pradesh University.

both the genders employed in various Multi National Companies, based in Delhi and Gurugram. The population taken for the study aged between 25-40 years, by using random sampling technique.

b) Tool Used

Achievement Motivation Scale (Deo Mohan, 1985)

Data were collected with a questionnaire named Achievement Motivation scale by Deo Mohan (1985). The scale consisted of 50 items, out of which 13 were negative and 37 were positive items. Responses were made on a 5 point likert scale. A positive item carries the weights of 4,3,2,1 & 0 respectively for the categories of always, frequently, sometimes, rarely and never. The negative items were scored reversely i.e. 0,1,2,3 & 4 for the same categories. Test- retest reliability of the scale is 0.69. The coefficient of correlation between the scale and the projective test is 0.54. The coefficient of

correlation between the scale and Aberdeen Academic Motivation Inventory is 0.75.

III. RESULTS

Analysis of variance was conducted to see the significance of difference and interaction effect of job/profession and gender on achievement motivation. Results of ANOVA have revealed the following findings:-

The main effect of profession has been found to be significant with F- ratio being 6.28, $p < .05$, indicating that executives scored significantly higher ($\bar{x} = 124.17$) than technocrats ($\bar{x} = 120.56$).

The main effect of gender has also been found to be significant with F- ratio being 17.840, $p < .01$, indicating females ($\bar{x} = 119.84$) scoring higher than males ($\bar{x} = 99.84$).

The two factor interaction effect of profession and gender has found to be insignificant.

IV. DISCUSSION

Achievement motivation is a theoretical model intended to explain “how the motive to achieve and motive to avoid failure influence behaviour in a situation

where performance is evaluated against some standard of excellence” (Atkinson, 1958). Both Mc Clelland (1953) and Atkinson’s (1964) achievement and motivation theory was based on a personality characteristics that manifested as a dispositional need to improve and

perform well according to certain standard of excellence.

Motivation is what causes people to behave as they do. Motivation outlines the achievement and pursuit of goals (Denhardt, 2008). Campbell and Pritchard (1976) stated that motivation is the set of psychological processes that cause the initiation, direction, intensity and persistence of behaviour.

Results of the present study show a significant difference on achievement motivation between executives and technocrats, and between both the genders. Though both the professionals are high on achievement motivation but executives step ahead from their technocrat counterparts. Executives are the distinctive part of an organization, they are the ones who plan and make sure that the plans are executed well in the organization. They set the target in organization and achieve their goals through other employees. Also they have greater opportunities to make all important decisions because of their position in the organization leading them to higher in achievement motivation. They are trained in a way that they have to achieve the target at any cost. Executives are externally motivated; work for external rewards, like money, grades and have fear for punishment. They are encouraged to perform to win and beat others, they believe in crowd cheering and trophies which boosts their motivation to achieve.

To the contrary, though technocrats are also high but significantly less than executives (see table 2.) In case of technocrats, it is because of the internal motivation that they achieve the goal, though they receive orders from higher level. Technocrats are internally motivated; they are driven by an interest or enjoyment in the task itself. They take pleasure in any activity at their work. They work to improve their work skills which increase their capabilities, as execution of the plans in the organization is their responsibility. They attribute their educational results to factors under their own control. They believe that they have the skills that allow them to be effective agents in reaching the desired goals (i.e., the results are not determined by luck). Thus, it can be said that without the attainment of achievement motivation, success might not have been gotten. Achievement motivated people are more concerned with personal achievement than with the rewards of the success. They do not reject rewards but the rewards are not essential as the accomplishment itself (Argyris, 2010) is a great reward.

On gender, analysis of variance indicates that females are significantly higher on achievement motivation than males. It depicts that females are more motivated than males. In the present scenario, females are constantly encouraged by their parents to do great things and achieve their goals. But it is to be noted that only selected females are high in achievement motivation (Jerath 1979). It is the skewed sample in the population who possess high achievement motivation

and reaches higher level in the organizations. Such females' sense of belief is defined through their ability to achieve results through success and accomplishment. These women achieve goals and prove their competence and feel good about them. These are the out scorer females who make maximal use of their efforts as a causal factor of their achievement. Females at this level are generally success oriented as they strive for more rewards, praise and social acceptance which in turn enhances their achievement motivation. The high achievement motivation is born out of their higher academic achievement in the stream profession.

V. CONCLUSION

In a nut shell, it can be concluded that both the professionals i.e. executives and technocrats are higher on the average mean of achievement motivation, indicating that achievement motivation plays a key role in meeting the targets and hence improves satisfaction of the employees and organization too. Achievement motivation increases the willingness of the workers to work thus increasing effectiveness of the organization and productivity. It can be said that achievement motivation can be used fruitfully for encouraging workers to make positive contribution for achieving organizational objectives. It facilitates the employees to perform better, increases employee commitment, productivity and also handles personal life well.

Women's Education in Postcolonial Nigeria Since 1960s

By Mutiat Titilope Oladejo

University of Ibadan

Abstract- This paper examines the quality and orientation of education acquired by women. Colonialism, no doubt raised the platform for women's education, at least by access to formal education, but the impact of relevant education for women has been characterised by inclusion and exclusion profound in the postcolonial realities of development in Third World countries. It interrogates the extent of dysfunctionality in the type of education women receive and its implication on their socio-economic being in postcolonial Nigeria. The dysfunctionality examined in women's education is a trend of neo-colonial tradition tied to the forces of globalisation. The dysfunctionality analyses the advantages and disadvantages offered by structures and institutions of education. Array of factors account for imbalances in the quality, orientation and access to education of women and girls. Also, the types of education affected the qualification for wage employment. However, even with requisite qualification, gender discrimination to an extent reduce the chances of employment in certain jobs, political participation and so on. Furthermore, various class connotations associated with marriage, ethnicity, religion has created a defensive perspective to differentiate and perceive women's education. From a historical perspective, primary and secondary sources such as archival records, biographies, books and journals were used.

From a historical perspective, primary and secondary sources such as archival records, biographies, books and journals were used.

I. INTRODUCTION

Education is a parameter in development, but its growth is subject to multivariate factors. In developing countries, indigenous education has been and its part of sustainable livelihood in rural societies, especially as used by women in agriculture. The importance of women's agricultural work was obvious in Ester Boserup's book on *Women Role in Economic Development*.¹ The role of women in agricultural work was emphasised and the limitations therein is what women lacked for modernized development. Thus, the post independence era engaged development planning and education being an indices of modernized development was a focal points but in reality it is characterised by dysfunctionality. In 1985, a report from OECD criticised the approach to women's development as home-economic oriented, therefore a futuristic intervention was to focus on income-generating activities.² The home economist

approach was an outcome of the monotypic emphasis on teacher education and domestic science education women were exposed to. Hence, emphasis on income-generating approach was in line with the findings Boserup covered in her book. The recurring phenomenon from the 1980s remains the mismatch and or dysfunctionality in education and economic empowerment for women. In contemporary times, women's education is a developmental challenge, bearing the 2012 Gender in Nigeria Report where Nigeria ranked 118th of 134 countries in the Gender Equality Index. By implication, disconnect in policy and practice is evident. In Nigeria's policy system, initiatives from 1980s indicated an all-inclusive education system, in fact with specifics for the education of women and girls.³

The take-off point here is hinged on Martha Nussbaum's description of the realities of women's education experiences. Her conception of women's education is profound in the objectives of education itself and what it takes to actually have the right education for women.⁴ This work analysed the orientation of women's education; inclusion and exclusion factors that accounted for educational development or underdevelopment.

Within Yoruba family, what has kept women's education going as a norm is its non-gendered nature. In the words of Oyeronke Oyewumi:

The traditional Yoruba family can be described as non-gendered because kinship roles and categories are not gender - differentiated. The fundamental organising principle within this family is seniority based on relative age and not gender.⁵

This view is supported by Fafunwa's conceptual clarification of Traditional African Education as that all-

encompassing and a lifelong learning system not really gender specific.⁶

The idea of women's education in post-colonial Nigeria was a model of colonial legacies constructed on Victorian ideals. The societal perceptions about women's education was rooted in the British system, by this, Ellis wrote in 1842 that:

As women therefore, the first thing of importance is to be content to be inferior in mental power, in the same proportion that you are in bodily strength.⁷

This view prejudiced the outlook of colonial education systems to actually exclude girls from formal education before series of interventions that included school plans for girls.⁸ Globally, Philip Coombs regarded the prejudices as a cross national problem, where sex disparities were inherent in most societies.⁹ The perspective expressed buttress the kind of acceptance given to female education of girls in the 1920s, when the colonial administration emphasised domestic sciences as the ideal.¹⁰ Invariably, even with domestic science education, there was no plan for utilisation of women for visibly productive efforts in public sphere. Being the disadvantaged legacy from the colonial order, the post-colonial era characterised variants of dysfunctionality. The nuances of the post-colonial order created verdict of penalties in women's education. From missionary adventures to colonialism, the understanding of a women's education is monotypic. From the postcolonial era, the effects of agitations or before then manifested from 1960s.

II. CONCEPTUAL FRAMEWORK

The logical perspective adopted here is that there is education-career disconnect in the lives of women in post-colonial Nigeria. Thus, the theoretical frame assigns the Feminist Education Theory that ascribes the fact that oppressive and suppressive situations are a disadvantage to allow relevant education. Therefore, the feminist education theory profiles the way women's education create power and powerlessness. The conceptual frame is tied to the discourse and the phenomenology adopted to analyse the historical trajectories in women's education reflect the disconnect. Thus, the problems of women's education and its dysfunctionality was a function of

restricted access which was paramount in the colonial era and in the post-colonial era, the presence of educational facilities already addressed the question of access, however, the challenges of relevant education was of the post-colonial era, where there are less motivations for women to aspire and of course patriarchal connotations that impedes career advancement for married women. Therefore, the nuances of relevant education are predicated on the way education is used for economic advancement. Much as opinion of women's education in Africa, Nigeria inclusive seemed to be that of disparity to men,¹¹ the question is of what education really guarantees desired development for women. Invariably, that is educational access rarely translate to sustainable career.¹²

III. WOMEN IN DEVELOPMENT: THE THEORY IN PRACTICE

Women in Development approach emerged in the 1970s and it is framed on the fact that education leads to employment and ultimately empowerment. From the 1970s, WID was a determinant in educational planning to an extent that it increased the motivation for girl - child enrolment for primary education in Africa. In a statistics used in Claire Robertson's article.¹³ The enrolment figure for Nigeria indicated an increase in girl's education till the 1980s.¹⁴

During the military regime of the 1970s, the oil boom aided expansion of educational facilities. According to Modupe Faseke, the attitude of parents to girl-child education increased.¹⁵ The most sought path to civilisation in post-independence years was education. There was aspiration for this and mostly, Christianity especially the Pentecostal waves aided the need for education. A robust middle class made up by working in the civil service increased the enrolment of girls in primary education and beyond that, religion played less impact. Given Christianity in Southern Nigeria, education is of priority of course the veracity of this fact is evident in the narratives of E.A. Ayandele.¹⁶ In northern Nigeria, enrollment of girls is relative but at least, the wholistic provisions of educational facilities

across the polity was an advantage to motivate aspiration was mitigated because the establishment of educational facilities was valued as desired development.

The increase lends credence to the fact that parental interest to educate female children surged in the 1970s and the WID theory actually worked then, because it created empowerment. The kind of empowerment projected a social change and it created a generation of women in professions such as teaching and nursing.

IV. REALITIES OF EDUCATIONAL PLANNING FOR GIRLS IN THE 1960S

Planning and provisioning for girls' spaces in missionary schools was difficult. Initially, in some parts of Yoruba land, girls were not considered for schooling. After the 1960s, spaces were created for girls in boys' schools and separately the missionaries established girls' schools.¹⁷ The school established found it uneasy gendered schooling system. In Ekiti for instance, this problem gradually led to the integration of boys and girls.¹⁸ This was conveniently done to ease the burden of management of girls' interest in planning. In the 1960s, the girls lamented that:

We were guests and so had very little voice in school affairs, we often ran into difficulties on where to have our evening studies ... in Christ's school, when the principal made announcements, he forgot to say anything about the girls, since they were such a tiny minority (fifteen girls in a students' population of four hundred and fifteen.)¹⁹

Gradually, girls' education became imperative and was a trend in the 1960s. The integration of girls was fostered by the structure of the education system of 6-3-3-4. The policy was not gendered because it was an equal ground. In fact, in planning the curriculum, about three women were involved.²⁰ The outlook of the curriculum lacked gender discrimination, but most women had the challenge to access relevant education due to cultural values and in some climes, religion. At the first instance, majority of the Muslim dominated areas in northern Nigeria tend to be non -chalant about girls education, this view is in consonance with Annan - Yao's explanation that:

In patrilineal communities, girls are considered transitory members of their families because the ultimate aim of their parents is to marry them off obligatorily into other families. Male family members exploit the transient of girls in their birth-homes to argue that they are not valuable to their birth families of this attitude hamper right to protection and reinforces gender discrimination.²¹

V. INTERVENTIONS FROM NATIONAL ASSOCIATION OF UNIVERSITY WOMEN FROM 1960S

In the 1960s, there was new awareness for women's education in Nigeria. Precisely in 1959, the International Federation of University Women Commissioned Lady Ademola to evolved an association for university women in Nigeria. This led to the revival of networks to identify women working in the university. Mainly, female academics from University College Ibadan (UCI) were readily connected. The first set at the vanguard of women's education promotion on the platform of National Association of University Women (NAUW) were:

- ✚ Dr. Irene Igbodaro (A Medical Doctor in Ibadan)
- ✚ Mrs. Tinuade Olabisi Odeinde (An Assistant Librarian at University of Ibadan)
- ✚ Mrs. Sowunmi (University of Ibadan)
- ✚ Mrs. Mauren Asabia (University Ibadan)
- ✚ Mrs. Letta Schatz (University of Ibadan)
- ✚ Dr. Grace Alele Williams (University of Ibadan)
- ✚ Mrs. Ogunshye (Librarian at University of Ibadan)
- ✚ Lady Ademola (First Nigerian Woman to graduate from Oxford University)²²

The IFUW and NAUW nexus was directed to the education of women. The first attempt to development was a conference organized to infuse Lagos and Ibadan branches to discuss Nigerian Development Plans. In 1963, the multi-involved stakeholder conference entailed international collaborations from IFUW, UNESCO and The Federal Ministry of Education to discuss the growth of women's education, in which the research survey conducted already identified low enrolment of girls in the Free Primary Education Scheme introduced in 1955.²³ NAUW survey on girls education in western Nigeria under the Free Education Scheme and discovered that the enrolment of girls in the primary education was considerable with tuition free system; however, the

enrolment was not at par with boys.²⁴ Therefore, NAUW became an advocacy frontier to campaign for girls' education in Western Nigeria, through *A stay-in-school campaign and scholarship scheme for girls*.²⁵ Subsequently, the funds raised were used to sponsor girls' secondary education and tertiary education.²⁶

By 1966, *NAUW Newsletter* indicated the role university played in improving women the curriculum of secondary and modern schools for girls.²⁷ The challenges of women's education were visibly of the immediate post-colonial era when educated women in Nigerian University aggregated the education need of women as a necessity in primary schools, secondary modern schools, secondary grammar schools and university education.²⁸

VI. NUANCES OF RELEVANT EDUCATION

Relevant education is a type of learning that is applicable to the development of skills to enhance vocations, professions and industrial work. The perception of relevant education, at least in the post-independence era was gendered. Relevance was subjective to the understanding of religion and patriarchy because it was strongly guided. Basically, teacher and nursing education were considered by men and even women to be most suitable for women's public engagement. For instance, until recently, nursing was regarded as a female profession. In Nigerian parlance, the occupational titles of nurses were regarded as feminine. A matron was a woman and therefore absurd to regard a man. Also, the title of nursing superintendent was feminised to mean Nursing sister. These perceptions lend credence to the way the society tend to define the career path for women and even by women.

The kind of education women had access to though qualitative but lacks relevance due to contemporary realities which was an offshoot of the politicisation of education and economic systems since the 1960s. The fact that Nigeria is a product of manipulated identities created dysfunctional political economy that de-prioritised educational needs for national development. Inadequate or lack of female interest in certain fields that required technical and industrial education. From 1960s, the kind of education women received was under the banner of neo-colonialism. Hegemonic demands for resources marred the impossible which could aid inequality are in the style of which constitute education for women.

In the 6-3-3-4, education system, the general perception about education and possibly the integration of girls was aimed at gender integration and nation building. Most families were interested in their daughter's education. At least within the middle-class family of 1960s and 1970s, fatherhood instincts were attuned to girl enrolment in schools. Women's educational advancement was a social order in conformity with the free education introduced in the 1950s and it was in the interest of the aspirations of the modern Yoruba family.

Women's education was entangled and limited to certain professions. The socio-economic realities of the postcolonial era necessitated schooling, yet it was encapsulated in the realm of survival and sustainability. Female enrolment in teacher training school was often high and regarded as the most suitable. Generally, scholarship on feminisation of schooling in Nigeria is not glaring but it is suffice to explain that the kind of education preferred for girls and women in the first two decades after independence was aptly aimed at building an African home, however its feminisation has rarely gained attention in the scholarly nexus of schooling and feminised ideologies consequently.

Unlike the decades proceeding 1960, the recent statistics in girl child education or enrollment as shown below:

Table 1: Primary Enrollment 2004-2008

Year	MF	F	F%
2004	21,395510	9,571016	44.73%
2005	22,115432	9,926359	44.88%
2006	23,17,124	9,948567	45.36%
2007	21,632070	9,948567	45.99%
2008	21,294517	9,810,575	46.07%

Source: National Bureau of Statistics: Social Statistics, 2009

By implication, the primary education enrolment of girls dwindled in contemporary times and vividly, the phenomenon of poverty is constantly a factor. Given the fact that the level of socio-economic stability was a multi-layered effect of the Structural Adjustment Programme (SAP), several ramifications of underdevelopment is evident in Nigeria's education system. To an extent, this is very preponderant that female enrolment in teacher training is constant. Inadequacy in enrolment in primary education and lack of interest to move beyond secondary education visible accounted disciplines for low enrolment in other beyond, education and managerial systems in polytechnics. According to Nigeria Bureau of Statistics, enrolment in Teacher training programmes was higher for female; of course the stereotypic perception of the post-independence era still had effects on the reasons for optional choice of mainstreaming women into the teaching profession. As shown in the table below:

Table 3: National Teachers Institute (Distance Learning) Enrollment

Year	Total	F	F%
2003/2004	29276	17082	58.35%
2004/2005	29449	17730	60.21%
2005/2006	23693	14352	60.57%
2006/2007	23567	14487	61.47%

Relatively, female enrolment for teacher training is appreciable, logically because it is relatively acceptable to men as husbands and it satisfies the masculine psyche. Male civil servants of the 1970s prefer to marry teachers.²⁹ The perception then was that a teacher satisfy the class status and definitely made the home. This implied rarity of women's education indisciplines beyond teacher training.

a) Life Statements

The kind of education available to women is qualitative but it lacks correlation with the socio-economic realities of contemporary times. Given the real life scenario below:

b) Educated but Unemployed

Scenario 1:

I studied Agriculture for my first and second degrees. I am seeking for job. I am tired of bringing my children to school in the morning and taking them home in the afternoon. In fact, my car is a school bus. My husband is not concerned about my state of joblessness. I need to work just in case you get one for me! I am only selling these eggs to while away before I get employed.

Scenario 2:

I have a Ph.D. grade after my Masters programme. I have been searching for job all the while. My husband only manage to give me the car keys when he buys a new car to replace. He is a recluse at home, he is not passionate about my joblessness. In fact, I am ready to travel and relocate any where I can get a job. Even when I attempt to sell using the car to display, he frowns at it and yet he is not ready to pay my school fees to start a doctoral programme. He does not waste time to express grievances if the food is lately prepared,

but he pretends not to feel my emotions for being jobless. I am ready to relocate, even if it means separation.

Scenario 3:

Since my days in the Polytechnic, I have made up my mind to be a business woman. I don't even have the passion to write any CV. I prefer to do buying and selling. In fact, I am comfortable being a trader and I take care of my children with pleasure. After all, while in Poly, I studied Accounting, the most sensible thing for me is what I am doing. Moreover, my elder sister is a Mastersdegree holder in Microbiology and she is a housewife. She can't even sustain a business venture.

It is sufficing to maintain that education alone in the formal path fails to capture the development realities. It is perpetual to find educated women exist as house wives and recently, the problematic was mapped in the interventionist role of Goldman Sachs Programme for 1,000 women in developing countries. The programme trained women in required and practical education to equip them for private business engagements.³⁰ Paucity in the availability of employment suggests a situation where women's education may appear useless but it remains a prerequisite. Furthermore, in northern Nigeria, women's education is not necessarily meant to qualify for economic function, but to fulfill a social responsibility of being. Often, this ideology was a function how Islam had been interpreted to project women's lives. Hence, the struggle to make education of women relevant for public consumption is rife. The perception in northern Nigeria is in line with how Freeman described that women's education has been to perpetrate a culture of femininity, that subordinate to men to serve their interest.³¹

Subordination and education of women are dysfunctional, but from the 1990s, socio-economic realities in the SAP era repressed the economy to question the relevance and even the context of education.

VII. INTERVENTIONS FROM GOVERNANCE FROM THE 1980S

Given the challenges of SAP in Nigeria's political economy of the 1980s, the Better Life Programme for Rural Women (BLP) initiated by the First Lady-Maryam Babangida acted to introduce an adult education model for women. The model of learning was institutionalised in women education centres in Nigerian States to create a holistic lifelong learning for skills and social development.³² Central to the adult education model was the National Centre for Women Development

²⁹ Oral interview with Mr. TunjiOyerinde Retired Principal, Ibadan 2009.

(NCWD). NCWD was an affirmative action and an offshoot of the National Policy on Women (NCW). The objectives of BLP thus indicate educational features as a factor that cuts across the underlisted:

The strategies of BLP included the following:

1. Raising the consciousness of women about their rights and responsibilities in the areas of economic, political and social development.
2. Mobilizing women for a better understanding and resolution of their problems through collective action
3. Educating women on simple hygiene, improved nutrition, family planning, childcare, care of husband and environmental sanitation.
4. Mobilizing women to seek leadership roles in all spheres of national life and to improve their educational status through literacy programs.
5. Enlightening women on opportunities and facilities available to them in their local government areas
6. Providing avenues for the acquisition of skills (and their development), credit facilities, and the establishment of cottage industries.
7. Providing opportunities for technological development, recreational facilities etc.

VIII. ENVISIONED EDUCATIONAL SPACES

In spite of the challenges of education for women and girls, the few women that had access to general and relevant education occupied viable professions. While the typical education accessed by women between 1960s and 1980s were tilted to nursing and teaching there were dimensions to explain other perspectives to public participation. In the works of Majorie McIntosh and Catherine Coquery - vidrovitch, as education increased the propensity and opportunity to engage in politics, governance and so on.³³ The categories of advantage and disadvantage varied, but the basic advantages are profound in the success stories of women in various professions. Modupe Faseke in the book *Nigeria Women Professional: A Historical Analysis* examined the categories of women who had to an extent positive experience of being educated. The book presented narratives of the biographies of women that excelled in various ramifications in Nigerian context. The perspective of the narrative focused on women in Development and retreats the outcome of development. Therefore, education is almost available and constant but several factors made or mar the relevance of education of course, the opportunities they had were either favoured by their class, ethnic or religious disposition in the context of Nigerian Society. Much as it could be argued that marriage was a disadvantage to women's education in northern Nigeria, it is not in entirety. In the description

³³ Majorie McIntosh 2009 Majorie McIntosh 2009. *Yoruba women, work and social change 1893-1960* Ibadan: Book craft.
Catherine Coquery - Vidrovitch 1998 *African women: A modern History*

of Justice FatiAbubakar's biography, she married before law studies. In fact her husband facilitated her ambition to study law at University of Ife.³⁴ Of course, her education was aided by the fact that her father was a colonial civil servant and her mode of education was trans-Nigerian, in the sense that she schooled in Ilorin, Sokoto, Ife. Being from the north, education was less motivated for women, but hers was exceptional and basically it is a function of aristocracy that feature class distinction on access to social welfare.

In Southern Nigeria, the excellences achieved in women's education were due to the presence of educational facilities through the missions and Christianity. The major Yoruba cities for instance, were quite cosmopolitan that it afforded all advantages to take for any girl. In the biographical narrative of BolajokoKuforiji - Olubi, the first female accountant in Nigeria, she had the opportunity to become a Boardroom professional in the banking finance, and business industry. Her life depicts the typical excellence associated with Lagos city, where education was a norm.

Also, the advantages of being educated especially among women in Southern Nigeria enhanced collective positioning and in fact it is an approach to development. By collectivity, several women mobilised each other to form interest groups to continuously advance the WID agenda of integration. For example, by the 1960s there was National Council of Women Societies (NCWS), also though necessitated by patriarchy, women's faction, wings were developed as separatist groups to enable women claim a platform for self determination and exercise developmental solutions.³⁵

Technology is contemporary and futuristic in development analysis. Invariably, technology is the future of development. The level of enrollment female in sciences remains relatively low³⁶ of course, the attitude is rooted in the understandings of education early decades after independence. The new space that could really visualise the realities of development is women's access and opportunity to technology in all ramifications.

IX. CONCLUSION

Women's education and its relevance for economic sustainability remains a function of material poverty. The disparity and inability to correlate education with desired livelihoods indicated the phenomenon of

³⁴ Remi Britto 2005. "Forerunner of Women's Rights and Advancement: Justice (Mrs.) Fati Abubakar" in Modupeolu Faseke (Ed) *Nigerian Women Professionals: A Historical Analysis* Lagos. Tidings Publications. pp.91 - 96.

³⁶ ...

exclusion and limitation to selective jobs in teaching, nursing, clerical work, secretarial duties and so on. Mainly, the contemporary realities that match education and development are entangled. The quality, quantity and content of education women receive rarely fits into employability and neither provide alternatives for income generation. This trend had been identified since the 1970s as Robertson and Eliou observed that education for women is paradoxical and mostly that; "The road which leads (girls) to school infact only a detour, which leads them back to the home.³⁷ The quest for education within the political economy from the 1960s was largely definitive but practically disoriented. Thus, dysfunctionality recreates the question that the post education Nigerian society fails to restructure an economic system that makes contextual relevance.

³⁷ They maintained this position in the context of the realities in Ghana. Robertson 1984b, table v -1; Elious 197336

Piano Sonatas of Uzbek Composers in the Context of the Evolution of the Genre in Europe

Mukhamedova Feruza Nurmakhmatovna

Abstract- This article is devoted to the problem of piano sonata genre in Uzbekistan in the context of the evolution of the genre in Europe. The questions of origin, subsequent development and the present state of the sonata are touched upon here. In addition, the author considers some opuses of composers of Uzbekistan.

Keywords: sonata, pink sonatina, composer, piano, Uzbek music.

I. INTRODUCTION

Uzbek piano Sonata acquires its unique national, bright appearance. This is manifested in the overcoming of the conventions of sonata form and search in the genre of new sound forms. At the same time, the uniqueness of the local sonata, of course, related to the historical path that the sonata passed by a couple of centuries from its inception to the early twenty-first century. All of these make the genesis of Uzbek sonata that so interesting and deserves in-depth study of penetration into its essence.

It is known that the term "sonata" (ital. sonare - to sound) appeared in the XVI century, and as opposed to cantata (ital. cantare- sing) denoted any instrumental music.

Decisive contribution to sonata genre formation that was made by Italian composer Domenico Scarlatti (1685-1757) who wrote over 500 sonorous sonatas. His sonatas are predominantly one-parted, distinguished by an artistically significant filigree of technique, unique sound finds. "Virtuosic features of sonatas of Scarlatti are associated with pedagogical purpose of these works, published by composer under the title of "Exercises" (Essercizi) and as a means to acquire "confidence in playing the clavicembalo" [1.C.42-43]. It is curious that Scarlatti type of sonata, in our opinion, was particularly close to Uzbek sonata. The reasons for this are, in our opinion, the desire of Scarlatti to convey in them the characteristics of folk instrumental culture. It is not by chance that Afrasiab Oud and Italian Lute have nothing in common due to the trajectory of the Great Silk Road, which connects the east and west with their threads. Life of Scarlatti was associated with both Italy and Spain. Along with the Italian features in the Scarlatti sonatas, there are also Spanish features.

In his clavier sonatas, Scarlatti liked to use the techniques of playing the guitar, close to the specifics of the game on Uzbek folk stringed-plucked instruments.

Author: Senior Researcher of the State Conservatory of Uzbekistan.
e-mail: author.uzb@mail.ru

The rhythms of Spanish dances, like Uzbek 'usul's, quart structures of chords, active energy that all signs reveal features of community with Uzbek sonatas and sonatins. Spanish folk music, deeply imbued with Scarlatti, determined the identity of his sonatas [2, p.193]. The texture of bill in sonatas Scarlatti also reveals the features of community with Uzbek sonatas. Like Scarlatti in the work of Uzbek composers, sonatas are not always sonata form, but a sphere of expressing creative thought, imaginative impressions and experiments in terms of sound colors. Naturally, Scarlatti's clavier sonatas are the birth of a sonata genre, and the Uzbek sonata is a qualitatively new stage of its development, taking into account the diversity of sonata and sleepless structures, their national variants. The process of birth here is connected with the moment of revival of the genre.

It should be noted that the sonata genre is developing in Uzbekistan within two directions: creative-experimental and instructive-educational. A creative and experimental sonata, especially piano, as an encyclopedia of writing techniques and laboratory of its creative abilities, especially represented in a variety of Beethoven's works, was the closest aesthetics of Uzbek composers. Beethoven's sonatas most fully reflect his ideological world of thought and feeling, the innovative nature of creative pursuits. As the researcher and editor of piano sonatas of Beethoven, A. Golden veiser noted: "Beethoven, as no one before him, showed inexhaustible possibilities, which conceals the form of sonata in himself; the diversity of sonata form in his piano sonatas is infinitely great" [3, p. 4]. In this sense, sonata of E. Salikhova is to certain extent close to the classical type of sonata, which is a three-part cycle with historically formed functions of parts. As V. Golovina noted, she stressed the formative role of folklore intonations in this work: "... interest in this sonata is not caused by the material itself, but by an attempt to find new possibilities for its composition and development. In this direction, the author achieved original solutions" [4, p.80]. Each of the three parts of the cycle contains a single, internally evolving image, thereby overcoming sonata. It is characteristic that this feature of sonata drama was noticed by Y. Kremlev in Beethoven's work: "One of the most remarkable achievements of Beethoven in the interpretation of the sonata was the desire for its image integrity, to its sonata-program unity" [5, pp. 326].

The evolution of the sonata genre in the work of romantic composers (F. Schubert, F. Chopin, R. Schumann, F. Liszt, J. Brahms, E. Grig, etc.) were not passed by attention of Uzbek composers, especially N.Zakirov. Romantic sonatas are characterized by the disclosure of subjective experiences, feelings, emotions. The desire of romantic composers for the greater thematic unity of the cycle led to the emergence of one-part piano sonatas by F. Liszt.

For the development of Uzbek sonata, the achievements of composers of XX century by S.Rakhmaninov, A.Onegger, P.Khindemit, and I.Stravinsky are very significant. The influence of sonatas of these composers appears in the appearance of new elements in the Uzbek sonata, sometimes not containing in the cycle any part written in the sonata form.

It should be noted that in the works of Uzbek composers take precedence of the war, which is especially pronounced national nature of Uzbek music: ticket nest, types, textures, structural elements of the national – “khona-bozgu”, imitation of folk instruments in piano music. Composers of Uzbekistan prefer a model of sonata form, in which there is a sharp dramatic conflicts, comparison is carried out with the help of timbral colors, characteristic of the Impressionists (Debussy, Ravel). In the sonatinas of Uzbek composers, there are influence of the War of French composer Maurice Ravel (1875-1937), which lack of dramatic conflict inherent in classical sonata dramaturgy; here the topics are mapped on the basis of different colors of sound reflection. As I. Martynov noted: “After the dramatically rich, philosophically profound music of the big sonatas of Schumann, Chopin, Liszt, Brahms, who confirmed tradition of the genre after Beethoven, Ravel goes to a different sphere, far from the problems of romantic sonatas, which was not yet exhausted and was transformed in a new way in the work of Scriabin” [6, p.37]. There is interpretation is not just a lightweight form of sonata, but the search for new types of textures and harmonies that were inherent in M. Ravel – impressionist brilliance and search for sound realities using the illusory-foot letters [7, p.56]. Especially this tradition is felt clearly in “Pink sonatina” by G. Mushel, which is considered a classic of Uzbek sample of this genre. Built on the intonations of Uzbek folk melody “Ramadan”, dancing main party is compared to the intonation close, song store by warehouse party. According to observation of Doctor of Arts, Professor T. Gafurbekov “A small ritual popevka (characteristic intonation-expressive melodic turn), or rather, successfully found the mobile in his genesis version of the melody of “Ramadan” in “Pink sonatina” gained new, hitherto not distinctive semantic facets” [8, p. 230].

Being an original artist, a sensitive play of light and shadow, G. Mushel represents the sounds a picturesque image – “flower garden in different colors:

first part is in soft pink, the second is in blue, third – in orange tones” [9, C. 36]. This is primarily reflected in the coloristic diversity of the sound, use pedals as a means of expressive timbral effects. “Pink sonatina” was firmly established in the repertoire of student-pianists and has been attracted the interest of artists, their scientific and methodical works of researchers, revealing its stylistic wealth. So, A.Vakhidov discovers in the second part of Adagio development of traditions of Bach in a smooth motion strict four-voice. “The origins of such invoice, – in his vision, – in the organ preludes of J.S. Bach” [10, p.12]. All this contributes to the deep meaningfulness of the music of “Pink sonatina” by G.Mushel in its linkages with national and world traditions. Along with the sonatina, which are both looking for new sound possibilities and special flight and sketchiness, created a lot of resembles with pedagogical and instructional value. Such compositions including sonatinas that those were written by S. Varelas, Kh. Azimov, special for children and youth. As a tribute to the tradition, sonatina was created at the time of D. Saidaminova, which skillfully emerges the classic structure of the genre and form. Interesting material contains sonatinas, F. Yanov-Yanovski, M. Bafoev, Kh. Khasanova. Sonatina of Kh. Rakhimov is interesting, attracting with thin sound, expressive colors and fine textures. It is a three-part cycle, is individually interpreted by the composer, in which the tradition coming from the culture of Uzbek instrumental music on folk instruments, in particular, the dutar, organically interact with traditions, coming from French impressionism, in particular from sonatinas of M. Ravel.

Sonatina revealing of young composer Z. Khodieva – writing XXI century, which the composer introduced the idea of fractality in the national refraction. Sonatina is compact three-part cycle, united by common interesting structure, which forms a unique module cycles. Designed in a transparent, classically clear lightweight texture, sonatina of Z. Khodieva is remarkable new perspective on this genre; desire to use its resources in terms of update stylistic techniques of writing.

Among the high artistic achievements of the sonata genre in Uzbekistan, five piano sonatas of N. Zakirov were occupy a significant place. He has a very interesting approach to the sonata, mood swings, varied texture, and a national rhythm. His works are diverse in content and form; they reflect new trends, technical pursuits of modern piano music. Sonatas of N. Zakirov are mainly cyclical, dominated by the three-part structures and contrast-compound cycles predominate.

First and second piano sonatas, which were written by V. Saporov, are in free improvisational form. These sonatas are notable to the memory of D. Shostakovich. It is a three-part cycle with the traditional relationship of parts, within which there is intense thematic development based on implementation of

principles of Uzbek traditional music, monody, connected with the principle of monothematism. In the final, in the three-part form, composer uses theme in the middle part of main section, which is from the first part of the Fifth Symphony of Shostakovich, organically weaving it into musical drama of the finale. As a professional pianist, V. Saporov very sensitively feels piano texture, which varies pianistic convenience.

Along with papers, student-pianists studied sonata opus, which was performed by N. Giyasov, M. Atadjanov, A. Khashimov. In the sonata of A. Mansurov, there were utilized typical techniques taken from folk music, sound production of Uzbek national instruments.

In the development of sonata genre in Uzbekistan, to summarize analytical observations is necessary to note the diversity of poles that dominant line is in relationship of national and universal, individual and universal, which provides communicability of Uzbek piano music, converting into the world community, providing artistic significance in the world of performance practice.

Christian Ethical Values and the Quest for Sustainable National Development in Nigeria

By Olumuyiwa Olusesan FAMILUSI

University of Ibadan

Abstract- The quest for development and its sustainability has been a top priority for governments, societies, international political organisations, the academia and non-governmental organisations across the globe. The aim of this paper is to examine the imperative of Christian ethical values towards attaining sustainable development in Nigeria. Data for the study were collected via exiting literature on the subject matter, statistical information on development issues, as well as personal experience of the researcher. The findings revealed that there has been no meaningful development in modern day Nigeria or a sustainable development as apparent in the level of poverty, infrastructure decay, falling standard of education, poor health care delivery system, low life expectancy and unemployment in the country. This development is largely attributable to the neglect of Christian ethical values by both the leaders and followers, who profess Christianity. Thus, the paper recommended moral transformation on the part of all Christians in order to achieve sustainable development which has been obscure in the country.

I. INTRODUCTION

Development is an issue of concern to individuals, government as well as corporate bodies at all levels. When it is elusive in any society, people are considered to be suffering, while such a society is adjudged to be a failed one. Since failure is never desired, efforts are made to ensure that development is a reality. Achieving development is not an end itself but a means to an end, hence the clamour or need for sustainable development. Literature is replete with works on various aspects of development and sustainable development across the globe. Thus, there exist studies on the subject matter from political, economic, medical and technological perspectives. This paper attempts to contribute to scholarship in the context of Christian ethics, which has not been adequately paid attention to in the previous studies by espousing the relevance of Christian ethical values to sustainable development. The justification for this hinges on the fact that though Nigeria is not a mono-religious society, yet many policy formulators are Christians. Thus, it can be inferred as would be established later that underdevelopment in Nigeria is a bye product of the neglect of Christian moral values on the parts of Christian leaders and followers.

II. CONCEPTUAL ANALYSIS OF DEVELOPMENT AND SUSTAINABLE DEVELOPMENT

The term development is better explained than defined as it has various meanings depending on the context in which it is discussed. Development is a state or condition - static; as well as a process - dynamic. It is a multi-dimensional process involving reorganisation and reorientation of entire economic and social system. Thus, we can think of the concept in two broad dimensions namely; economic dimension, which was dominant during the post colonial era and the humanistic dimension, which served as an apology to the economic dimension. Development can be understood also as a process of improving the quality of human lives with emphasis on the following as indicated by Todaro:

1. Raising people's levels that is, income and consumption, levels of food, medical services and education through relevant growth processes.
2. Creating conditions conducive to the growth of people self-esteem through the establishment of social, economic and political systems, which promote human dignity and respect.
3. Increasing people's freedom to choose by enlarging the range of their choice variables such as varieties of goods and services.¹

According to Dudley Seers, the questions to ask about a country's development are: What has been happening to poverty? What has been happening to unemployment? What has been happening to inequality? If all these have declined, there is an evidence of development in the country concerned. The reason being that, these factors are considered as the central challenges that countries battle with; and try to at least minimize. Invariably, a rise in any of them disqualifies that society from being called developed.²

Development must represent the whole array of change by which an entire social system attends to the diverse basic needs and desires of individual and social groups within that system; and moves away from unsatisfactory life condition towards a life that is materially and spiritually better. Since human beings are fundamental elements in development, Human Development Index (HDI) provides an alternative measure of economic well-being of nations that may not necessarily reflect the usual measure of per capita

income. This is understood as the people centred alternative of development and it is based on the belief that all humans can reach their potentials. Development involves empowering groups and individuals to make their own choices. Individuals and social movements are the agents of change.³ Human development index is therefore a composite of the following indices:

- Life expectancy at birth
- Education attainment as measured by mean years of schooling and adult literacy
- Standard of living as measured by per capita income.⁴
- For any society to be described as developed, the following attributes must be noticeable:
- High level of living manifesting qualitatively and quantitatively in form of high income, adequate housing, good health, unlimited access to education, low infant mortality as well as life expectancy.
- High level of productivity, which is made possible because of the presence of complementing factors such as physical capital and experienced management.
- Low rate of population growth and dependency burden. In this case, children are no longer seen as investment that will yield dividend.
- Low level of unemployment and underemployment. This can be attained when a country is developing as there is usually proper utilisation of labour resources, which raises the standard of living, enhances productivity and further boosts the income generating capacity of the country.
- Declining share of agriculture in total output. A developed country is known for advanced technologies, good organisations and high quality physical and human inputs, which will engender commercialisation of agriculture and ultimately industrialisation.
- Liberalisation, independence and invulnerability in international relations. One of the attributes of a state is sovereignty and independence. Any country that possesses the characteristics earlier mentioned will no doubt become automatically liberated, independent and better placed on the politics of highly unequal distribution of economic and political power between rich and poor nations.⁵

In contrast, a developing country is characterised by low level of labour productivity, high level of population growth and dependency burdens, high and rising levels of unemployment and underemployment as well as significant dependence on agricultural production and primary products exports.⁶

Historically the concept of development is as old as civilization. Its extensive use in western societies from Greco-Roman civilization to the late 19th century as a generic construct that designates the most varied

aspects related to humanity's well-being, however, made the concept come closer to that of a doctrine. In contemporary time, Social Darwinism has been reclaimed to explain development as a process of evolutionary succession in stages, where human societies leave rudimentary model until they arrive at a western industrialised civilization consumption model, which is considered unique and universal.⁷

Development is also seen in light of modernisation. In this sense, modernisation refers to a model of progressive transition from a pre-modern or traditional society to a modern society. This originated from the ideas of Max Weber and it provided the basis for the modernisation paradigm developed by Talcott Parsons. Theoretically, modernisation looks at the internal factors of a country while assuming that with assistance, a traditional country can be brought to development in the same manner more developed countries have been.⁸

III. SUSTAINABLE DEVELOPMENT

The term sustainable development has been explained in different ways therefore, there is no consensus among scholars in respect of its exact meaning. The Brundlant's report of the World Commission on Environment and Development of the United Nations 1987, defines sustainable development as the development that meets the needs of the present without compromising the ability of future generation to meet their own needs. This has become the most often quoted definition of the concept. The content varies according to culture, time and perspective and can only be properly understood by adopting the integrative approach involving ecological, social, political and economic consideration. Thus, it can be conceptually broken into three parts namely, environmental sustainability, economic sustainability and socio-political sustainability.⁹ In light of this, Hasna sees sustainability as a process, which tells of a development of all aspects of human life affecting sustenance. It emphasises conflict resolution and involves pursuit of economic prosperity, environmental quality and social equity.¹⁰ Sustainable development is an eclectic concept thereby having a wide array of views under its umbrella.

Alternatively, it is defined as the development that is likely to achieve lasting satisfaction of human needs and improvement of the quality of life and encompasses the following:

- Help for the poorest who are left with no option but to destroy their environment to survive.
- Idea of self-reliant development with natural resources constraints.
- Cost effective development using different economic criteria to the traditional, that is to say development should not degrade the environment.

- Important issues of health control, appropriate technologies, food self-reliance, clean water and shelter for all.
- People centred activities, that is, human beings are the resources in the concept.¹¹

As opined by Donald Brooks, the paradigm or worldview emerging around this concept recognised the need to ensure and facilitate the following: Integration of conservation and development, maintenance of ecological integrity; satisfaction of basic human needs, achievement of equity and social justice as well as provision of social self-determination and cultural diversity.¹²

For the purpose of this piece, we shall be concerned with economic and socio-political sustainability with emphasis placed on the level at which Nigeria can be said to be developing in the socio-political context and the role Christian ethical values can play in ensuring development and ways of sustaining it amidst social and economic upheavals, which have become a recurring phenomenon in the country. From the foregoing, it can be unequivocally adduced that development is a precursor to sustainable development, hence, the expediency of the clarification of the two related terms – development and sustainable development. In Nigeria today, one may wish to ask if there is any noticeable development before its sustainability is conceived.

IV. DEVELOPMENT ISSUES IN NIGERIA

From all indications, development is a hypothesis in the 21st century Nigeria. It is becoming increasingly illogical to think Nigeria is a developing society as every indicator of development has almost disappeared and what is obvious is retrogression. The attributes of underdevelopment earlier mentioned explain the true situation of things in the country. In practical sense, there is obvious poverty in Nigeria. More than 50% of the population are ravaged by poverty.¹³ This is a paradox given the economic report released by World Bank in 2014, which placed Nigeria as one of countries with highest economic growth rates in the world averaging 7.4%. In spite of this, poverty still remains significant at 33.1%.¹⁴ According to a UNICEF report released on 29 June, 2016, about 69 million children are estimated to die, while 167 million will live in poverty by 2030¹⁵. Factors responsible for poverty have been identified by scholars, these ranges from corruption to bad governance as established by Olukunle¹⁶, Akanmidu¹⁷, and Familusi and Oke.¹⁸

Another indicator of underdevelopment in Nigeria is unemployment as well as underemployment. There are many universities and degree awarding institutions that produce graduates every year with no provision for how they can be gainfully employed. This has pushed many of them to take up menial jobs that

should be meant for those who are not educated. Recently, the federal government wanted to recruit ten thousand police men and about 750 thousand people applied. This is just one of several cases of such. The rate of unemployment was put at 12.1% by the end of March 2016 from 10.4% by the end of the last quarter of 2015¹⁹. According to another source, 80% of Nigerian youths are believed to be unemployed.²⁰ Worse still, several businesses have collapsed, while factories have metamorphosed into churches.

There is high level of infrastructure decay in Nigeria as roads have become death trap, while prisons are not habitable because they are not well funded. As population increases, one would expect number of prisons to increase but this is not the case. Consequently, existing ones are overcrowded.²¹ One may not be wrong to say that zoos in developed countries are better equipped than prisons in Nigeria. The health care delivery system presents a more pathetic scenario. Equipments have become obsolete, while training of medical personnel is inadequate. Consequently, several avoidable deaths are recorded on daily basis. Health workers embark on strike at regular intervals. It is worrisome that those who are responsible for the decay do travel abroad for treatment due to the level of the rot in the system. An example is that of a former Governor now a serving Senator who spent billions of naira to build a hospital in his state but went to a foreign country for medical when he had a minor accident.²² Water and electricity are rarely supplied. In fact, an average Nigerian now performs the role of a local government as he constructs road to his house, digs well or sinks borehole and provide electricity (light) through generator, inverter or solar. Despite the failure of the government to provide necessities of life for citizen, it has never failed to mount pressure on them to pay taxes and other levies. This is the reason water and electricity bills are circulated even when there is no supply.

What can one say about the falling standard of education? Several unemployable graduates parade the streets of Nigeria. How well-trained were those who trained them in schools? How well-equipped are laboratories and libraries? Many governors are busy building bridges and constructing roads at the neglect of schools. How well are universities in Nigeria faring in world ranking?²³ Worse still, establishment of universities has been taken to the realm of politics. Of course, one logically reasons that existing ones should be equipped before venturing into establishing new ones that are more or less like advanced secondary schools. An unpalatable joke was posted on facebook sometime ago when a graduate at the NYSC orientation camp described herself as a 'Corpse' instead of 'Corper'²⁴. This had long been noticed by Osundare who believes that the University system is a collapsing structure because mediocrity has replaced competence, the

intellectual space is thereby populated with half-baked and barely literate 'Doctors'.²⁵ The fact cannot be denied that nothing is working in Nigeria. Therefore, branding the country, 'a failed state' cannot be said to be hyperbolic. The expectation of Nigerians from the government that came on board in 2015 has been dashed, hence, a new slogan by many Nigerians, 'APC! One chance!' while the Peoples Democratic Party (PDP) has also adopted 'change the change' as its slogan. It is incontrovertible that the transformation agenda of the past governments and the change mantra of the present one have proved to be non-effectual. The frustration people experience everyday is threat to life expectancy, which at present stands at 55 years for female and 54 years for male. Though this is an improvement over what obtained some years back, it can be argued that nobody may want to die at 55 and 54. Life expectancy was 52 years in 2011 and it was 17th lowest, while in 1990 it stood at 46 years, the country is ranked among the 12th lowest. This is incomparable with Japan 87 for female and 80 for male as well as countries such as Spain, Andorra, Singapore, Italy, France and Iceland where life expectancy ranges from between 79 years and 86 years.²⁶

Corruption seems to have been institutionalised in the present day Nigeria and this accounts for the level of backwardness.²⁷ The present government promised to tackle corruption if elected during the 2015 electioneering campaign. Of course the battle has commenced but many people have become disillusioned because of the perceived one-sidedness of the crusade. The claim is that only those in the opposition party are being probed. Without exerting much energy on this, the truth of the matter is that Nigeria has been wrecked by corruption. The leadership of the Senate is facing corruption charge presently. One wonders the type of law that would emanate from such a chamber. One needs to ask how many Nigerians are not corrupt in the real sense of it. Corruption goes beyond embezzlement and misappropriation of funds. Lopsidedness in appointments, favouritism, kickback, non-executed of contracts and disregard for work ethics are all variants of corruption. Therefore, corruption, be it grand or petty is capable of endangering development.

The present economic woe cannot be blamed on the fall in the price of crude oil. It can be perceived as aftermath of visionless leadership, which failed to plan ahead during economic boom. A leader was once quoted as saying that the problem of Nigeria was not how to get money but how to spend it. Many states have not been able to pay workers salaries for many months, while some federal establishments can only afford to pay half salaries to workers. The banking sector has become endangered among other sectors that are collapsing. In recent time, retrenchment has become the order of the day. In June 2016, Eco Bank sacked 1040 workers, while Diamond Bank terminated the

appointment of 200 of its workforce. The Minister of labour had issue a directive to banks to stop sacking workers when it was obvious that mass retrenchment was imminent.²⁸ With destructive activities of militants, both ethnic and religious, one wonders if investment is feasible. Doesn't it sound unpatriotic to agree with Chinua Achebe that there was a country? Is there any manifestation of development in Nigeria? Can Nigeria still be referred to as a developing country? Hasn't the country retrogressed to the levels of underdevelopment, low development and no development? Obviously, the issue of development at present is a mere projection and hypothesis as nothing is working. If this is the case, how then can we think in terms of sustainable development when there is no development to be sustained?

Why is Nigeria not developing in spite of several efforts by government, individuals and corporate bodies? In the context of this paper, the answer is the neglect of religious moral values on the part of practitioners of religion who have battered its socio-ethical relevance. It is no encouraging news that as highly religious as Nigerians are, so they are immoral. This must have impelled a school to argue that religiosity may not necessarily guarantee moral consciousness.²⁹ However, religion remains relevant no matter the disposition of practitioners as would be established shortly.

V. CHRISTIAN ETHICAL VALUES AS A FACTOR IN SUSTAINABLE NATIONAL DEVELOPMENT

In this section, the relevance of Christian moral values to sustainable development shall be discussed. It is apt to do this because a large number of Christians is in various positions of authority at different levels. It needs to be stated that religion is a factor in the choice of party flag bearers and their running mates for presidential and governorship elections. This is why in the political history of Nigeria, civilian Presidents and Vice Presidents have never belonged to the same religion.³⁰ The current President being a Muslim has a Christian as his Vice while the immediate past President, a Christian had a Muslim as his second-in-command. This is also evident in many states while in states like Abia, Akwa –Ibom, Anambra Bayelsa, Ebonyi Dealta, Enugu, Imo, Rivers and Cross River are predominantly populated by Christians. Both the National Assembly and the Federal Executive Council have always had many Christians as members. In a study conducted on Christians participation in Oyo State party politics between 1999 and 2015, it was discovered that, a total of 2297 contested and were appointed into the position of Federal legislators, Governors, Deputy Governors, State Legislators, Commissioners, Advisers and Chairmen of Local Government Chairmen, 746 (32%) of whom were Christians.³¹ However, they have not been

fairing well.³² All that is heard is how they engage in sharp practices. Worse still, the church is not insulated from corruption. Unarguably, morality is presently jettisoned national issue, while Machiavellism is now the guiding principle.³³ For Nigeria to experience development and sustain it, application of the following ethical principles by both leaders and followers who are Christians is crucial and not negotiable.

VI. PATRIOTISM

One major cause of underdevelopment is lack of patriotism, which is demonstrated in several ways by Nigerians. The sense of patriotism is fundamental for sustainable national development not to be a mirage. Christianity teaches its adherents to be patriotic. This can be exhibited in form of doing what is required. In this case, leaders and followers act responsibly. There can be no progress in a country where people evade legitimate tax and levies. Many Nigerians are guilty of this. Jesus did not only encourage his followers including contemporary Christians to pay taxes, he actually paid his own (Matthew 17: 24-27). When asked whether it was lawful to pay tax to Ceaser or not, he responded that what belonged to Ceaser must be given to him (Mark 12:17). Paul also did not shy away from this (Romans 13:6-7). Ayantayo³⁴ holds that patriotism is necessary for national survival. It is what makes people willing to place their country above themselves, while Eidsomoe sees it as the bond that unites nation under one people and holds them together.³⁵ The anthem of the National Youth Service Corp calls youth to patriotism. This is germane because youths of today are the future leaders.

Youths obey the clarion call
Let us lift our nation high
Under the sun or in the rain
With dedication and selflessness
Nigeria is ours, Nigeria we serve.

The failure of leaders to discharge their responsibilities has put citizens in state of disillusionment. This is why patriotism is no longer considered to be worthwhile. A hungry man on the street may not want to know the imperative of patriotism in the face of abject poverty resulting from incompetence leadership. However in the moral context, there is no alternative to this, akin to patriotism is obedience to constituted authority. The problem of Nigeria is not always about leadership, followership is also culpable. Therefore, there is a need for followers to obey their leaders as no one becomes a leader except God ordains him or her. The Bible is replete with several passages that emphasise this. Romans 3:1-5 admonishes Christians to subject themselves to governing authorities as whoever rebels against them implicitly rebels against God. In I Timothy 2:1-3, prayer for kings and other leaders is solicited, while Peter

counsels his audience to fear God and honour the Emperor (I Peter 2:17). In supporting this, Shield says that Jesus and the apostles recognised the authority of the state and advocated that in a matter of conscience, its laws must be obeyed. In other words, the Christians have duties towards the state in which he finds himself. He is of the opinion that:

When Jesus told his disciples that if someone forced them to go a mile, they should go two miles, he was probably thinking of obeying and showing kindness to a Roman Soldier or to some other officer of the state.³⁶

Shield might indirectly be saying that obedience to constituted authorities is not always palatable as both good and bad leaders are to be obeyed. However, any law that is anti-God must not be obeyed. This must not be understood in light of civil disobedience. Jesus' counsel to render to Ceasar what is due to Ceasar and to God what is due to God suggests that in the event of conflict of interest between obedience to God and the king, God takes pre-eminence. This was demonstrated by Daniel as well as Shadrach, Meshach and Abednego in the Old Testament (Daniel 6: 1-28; Daniel 3) and Peter and other apostles in the New Testament (Acts 5: 29). Without any doubt, obeying God rather than man will attract the wrath of the leader. Therefore, the actor must make up his or her mind for possible eventuality. Kunhiyop's take on this is that while Christians are duty bound to be loyal and obedient to the state, disobedience would become a duty if obedience would clearly contrary to the command of God.³⁷

VII. LOYALTY, FAITHFULNESS AND HONESTY

Citizens are expected be loyal, faithful and honest. These values have largely disappeared from the lexicon of Nigerians in view of how fraud and other vices have become the order of the day. A typical Nigerian does not want to pay electricity tariff if he or she has the opportunity; a worker who gets to his or her place of assignment at 9am may write 7:30am in the register; dates of birth are falsified, while many have different states of origin; also, ghost workers abound in many establishments. All these can only worsen the already terrible situation. Virtues of loyalty, faithfulness and honesty are entrenched in the National Pledge, which reads:

I pledge to Nigeria my country
To be faithful, loyal and honest
To serve Nigeria with all my strength
To defend her unity
And uphold her honour and glory
So help me God

Nigerians recite the pledge as a mere ritual without acting the contents.³⁸ In fact, to serve Nigeria with all my strength is now sarcastically read as 'to serve

Nigeria is not by force'. The values recommended in the National pledge are as a matter of reality, cardinal in Christian ethics. For example, honesty is expected of everybody because without it, no nation can develop. No wonder Nigeria is a rich country, but the citizenry lives in abject poverty. Proverbs 14:34 categorically says, "Righteousness exalts a nation: but sin is a reproach to any people". Honesty is expected in God-man relationship and man-man relationship.³⁹ In other words, religious worship, business transaction, political and judicial administration, as well as employer-employee relationship must not be devoid of honesty (1 Samuel 12:4; 2 Samuel 18:12, 1 Kings 13:8, 2 Kings 5:6, Proverbs 12: 17, Leviticus 19:36 and Deuteronomy 25:15). Perhaps Nigeria is reaping the fruits of dishonesty of her citizens. Loyalty and faithfulness to the state, which can be demonstrated in various forms, are agents of transformation and development.

VIII. ADHERENCE TO OATH OF OFFICE

Experience has shown that many a Nigerian takes oaths without obeying its content. The oath which leaders and professionals take before assuming office or getting inducted contain ethical values such as dutifulness, impartiality and justice, which if obeyed will be beneficial to humanity.⁴⁰ The link between oaths of office and religion is apparent as the oath taker is made to hold a symbol of his or her religion. Keeping it is therefore crucial as seen in Ecclesiastes 8:2, Deuteronomy 7:8 and Matthew 23:32. It is time people took oath of office seriously. It must no longer be seen as a mere ritual without any intention to obey it.

IX. RESPONSIBLE INVOLVEMENT OF CHRISTIANS IN POLITICS

How can Christian ethical values be relevant when Christians continue to avoid politics like plagues? Their responsible involvement in politics will be a catalyst for sustainable development. According to Familusi:

Christian politicians must be guided by the principle of servant-leadership. In other words, willingness to serve must be their driving force. If this is the case, all evils that are associated with politics will be guarded against. If Christians are followers of Christ, His example as demonstrated during His earthly ministry must be followed...The relevance of integrity in politics cannot be ignored. In fact, it is what makes the difference. Therefore, Christian politicians must always exhibit integrity no matter what it may cost them.⁴¹

Responsible involvement of Christians in politics can only be possible if they act as salt of the earth and light of the world by observing all rules that guide politics. Politics must no longer be seen as a dirty game

but an opportunity to contribute to national development. The church has a role to play in the quest for sustainable national development. This can be done through constant advice or counsel to politicians, which must be based on moral principles contained in the scripture and other sources of Christian ethics. This will impel politicians to maintain integrity. Abogunrin has also advocated for active participation of Christian in politics because Christian Theology in some way deals with how God wants to share His goodness with everybody. This can only be realised if God hands over this responsibility to man so that he can use his God given talents to create policies that will be of benefit to others in all aspects of life. He believes that the teachings of Jesus have political implications from which Christians cannot run away. Therefore, His teachings were in many respects direct responses to political problems, political possibilities, political responsibilities and political alternatives, which He fearlessly confronted during His earthly ministry.⁴² The interplay of religion and politics must not always be viewed in the negative sense. In view of this, Familusi submits that religious politics can bring about sustainable development if religious people (Christians) abide by the ethical teachings inherent in their religion as such will provide good leadership and obedient followership. Also, one expects a credible electoral process in a religious community like Nigeria if the rules are obeyed. Religion being an agent of social control helps to keep people with the norm of the society, which is the real basis of politics.⁴³

X. REVIVAL OF CHRISTIAN WORK ETHICS

For any nation to develop, the labour force must be diligent. However, Nigerians lack the sense of industry. There is poor attitude to work in both public and private sectors. The civil service is worst hit because civil servants see the work as not 'my father's work'.⁴⁴ Therefore, lateness to work, absenteeism and abscondment have become the guiding principles. Sadly, office hours are sometimes used for religious activities. All these are antithetical to national development. An average worker may not be naturally lazy as postulated by Douglas McGregor in Theory X⁴⁵ of employee motivation, but lack of incentive, poor remuneration and hostile condition of service have reduced the level of commitment of workers in recent time. However, it cannot be said that every sector is poorly remunerated, even if this is an excuse. Therefore, there is a need to revive work ethics in all sectors of the economy. Work ethics, in the word of Ayantayo, demands that workers must be punctual at work place, cooperate with co-workers, work hard to justify their salaries, contribute their quotas to progress of work they are employed to do; and exhibit honesty, sincerity and straight forwardness at work. They are to endure

hardship when the need arises as dictated by the nature of their work.⁴⁶ Calving does not believe that any work is inferior as emphasis in his doctrine of calling, thus if Christians follow their proper calling, every work will have splendour in the sight of God. On this premise, the puritans hold that daily works of any nature is a religious imperative. According to them, those who will not sweat on earth will sweat in hell.⁴⁷ Without any doubt, dedication and commitment to duty will promote development. Dignity of labour is not only a cardinal virtue in Christian ethics; but also a divine commandment. Thus, Christians have a duty to be hardworking. Paul in his teaching emphasises this and warns against idleness (II Thessalonians 3:6-12). Also, slothfulness in business is denounced, while fervency in spirit and service to God is recommended (Romans 12:11). In Proverbs 2:29, a hardworking person is accorded the honour of standing before kings and not ordinary men. However, it is not enough to be hardworking as the work done must not be defective. As noted by Shield:

Everything a Christian does is to be done with a view to glorifying God (I Corinthians 10: 31). Work must surely be included in this. Because in his work, the Christian serves Christ as well as his employer, he must go beyond the call of earthly duty and seek to please the Lord. That means he must always seek to produce work of the highest quality. He knows that he is accountable to God for all he does and thus, from the quality of the service he renders or the goods he makes (Ephesians 6:5-8, Colossians 3: 22-24).⁴⁸

The pursuit of sustainable is a projection and hypothesis. To a large extent, it has remained obscure in Nigeria because the human factor is not considered to be relevant. One therefore doubts if there can be development, if human beings are not developed. Omoregbe belongs to the school of thought of the imperative of the development of human personality. It follows that it is the moral development of citizens that constitutes any country. The fact that development is multi-faceted cannot be denied, for a country is a living organism with many parts, each of which needs to be developed. In every structure, some parts are of primary importance, while some are secondary. Therefore, moral development is the organism of a country. Omoregbe further expatiates thus:

The primary aspects correspond to human dimension, while secondary aspects correspond to the infra-human dimension. The latter include the land, the natural resources, the roads, machines, buildings, etc. All these are important in a country and need to be developed. But they are of secondary importance. Of primary importance is the human dimension. This means that the development of a country is primarily the

development of the human dimension, that is, the development of human person. Now the most important aspect in development of the human person is his moral development. Moral maturity is a mark of national development. Indeed, it is a *conditio-sine-qua-non* for national development, for we cannot talk of the development of a country, if its citizens are morally undeveloped and immature. The moral development of its citizen must precede other aspects of development; otherwise, the process of development would be obstructed by the immorality of the citizens.⁴⁹

The argument is that while development is crucial, it can only be attained through moral transformation on the part of all who are involved. It has been adduced that underdevelopment is an after effect of moral bankruptcy arising from the neglect of religious ethical values. We are not oblivious of the fact that Nigeria is a multi-religious society; revival of Christian ethical values has been projected as a road map to sustainable national development since many Christians are involved in governance, formulation and execution of policies as well as administration at various levels of existence. In the present dispensation, 17 out of the 36 state governors are Christians as well as many other elected and appointed political officials. Therefore, they must be guided by Christian ethical values while playing their parts in the administration of the country.

XI. CONCLUSION

Sustainable Development is a global phenomenon. Thus, efforts are made to actualise it. This has led to formulation of policies by governments, societies, Non-Governmental Organisations, religious bodies, and international political organisations. As evident in Nigeria, hardly can one infer that there is development let alone the advanced form of it in terms of sustainable development in spite of several experiments, which have proved non-effective because morality has been ignored in the scheme of things. Given the social effectiveness of religion,⁵⁰ application of its moral values is a good way of ensuring development and sustaining it. It is on this premise that this paper has recommended moral transformation through a stringent application of Christian ethical values in governance, policy formulation and execution, discharge of responsibility by Christians in positions of authority as well as followers. Pessimism about the Nigerian project is not the answer. There is hope of a good, sane, decent and developed Nigeria if Christian ethical values are imbibed as recommended. This however can only be possible if religious leaders themselves shun immoral acts, which ravage the church today. They must always tell their followers and people in positions of authority the truth. How can one explain the attitude of Christian leaders, who hobnob with politicians thereby becoming

their apologists?⁵¹ The 7 billion naira allegedly collected by the leadership of the Christian Association of Nigeria (CAN) during the 2015 elections is still fresh in the memory of Nigerians.⁵² Such leaders have lost the moral right to preach ethics as doing so will be analogous to someone who has a log of wood in his eye but wants to remove a speck in another person's eye (Matthew 7: 3-5). The Anglican Bishop of Owerri, Cyril C. Okorochoa should be commended for rejecting a gift from Governor Okorochoa of Imo State, but rather advised him to go and pay his workers salaries.⁵³

Unlearning the Routines of Intelligibility: A Reading on Roland Barthes's Postmodernist/Poststructuralist Stance

By Larry Amin

University of Kara

Abstract- Roland Barthes's theoretical attack on the intelligibility of structuralism has always sounded as a philosophical reasoning that should be revered as such. This rather is a paradigm shift in human effort in the creation of a better life and in its understanding. Through a written text, it is possible to view cultural entities that reveal the forwarding of the world's civilization being conveyed by the author. This possibility is granted by individual/reader's cultural background, which varies with the variation of the latter's life conception. In this context, do we consider the author's biography or his/her imagination in our construction of the text's meaning? In other words, should we perceive life through the same lenses of the author by the help of the text? This article has argued that Barthes's stance on poststructuralism/postmodernism is not a philosophical reasoning but a necessary step in the human free psychological development. On the other hand, confining a written text to the author's intended meaning (which is not feasible), does not verify the human cultural diversifications; and finally, both poststructuralism and postmodernism are aiming the same cultural objectives which do not go for the understanding of the world through one and single discourse.

I. INTRODUCTION

A great work of art has the capacity of hatching multiple readings. And the articulacy of a narrative drives a certain conduct that calls the attention of the reader on the author. But the traditional critics' recourse to the values of clarity, nobility, and humanity, which they treat as neutral and self-evident, actually exerts a coercive, censoring force on other interpretive possibilities. Thus the savvy and popular differences between Roland Barthes's poststructuralist or postmodernist stance connotes altogether the idiosyncratic reader's freedom to act without constraints. What then are the consequences of ignoring the author in the process of reading? And through Barthes's attunement to poststructuralism, can we realize the hitting of postmodernist targets? This article considers the simulacra on Barthes's stance which is straddling between poststructuralist postures and postmodernism.

On the other hand, the idyllic creative ability to move against the literary composition establishments advocates the freedom in writing and reading. Therefore, the death of the author gives birth to the reader in order to do away with complexities and confinements of reading, which encode the fidelity to an origin, a unified meaning, an identity or any other pre-given exterior or interior reality.

It is in this perspective that Jean Francois Lyotard in "Defining the Postmodern" (1986); Julia Kristeva in "Crossing the Borders: An Interview with Julia Kristeva" (2006); Derrida in *Deconstruction* have each analytically viewed a perspective against the met narrative. This article observes that any approach under the postmodern umbrella considers the difference and suspects universal truths, objectivity, unambiguous meanings. It argues, furthermore, that grand historical narratives constitute an intellectual constraint on thinkers and writers. Therefore, Roland Barthes's poststructuralist stance should not be argued as adulation. Rather what becomes universal in the intellectual trend is the suspicion on what is said to be

In effect, the revisionist views forced by the evolving global civilization which are also thought up in the epochal condition open the liberation gates to do away with standardization of judgment. Alice Jardine in "Opaque Texts and Transparent Contexts: The Political Difference of Julia Kristeva" argues that:

A text is not a text if it is totally opaque, refusing to be brought to light, completely impervious to the hermeneutic gesture; and a context is never totally transparent, appearing in some kind of referential purity. Now, somewhere in between these two readings—the clear, fast, so-called spontaneous, more transparent one, and the unclear, slower, so-called reflexive, more opaque one—between the first reading and the second reading 'first and second only by virtue of our intellectual habits', is a certain kind of difference which is *political*: a difference in attitude toward *interpretation*.¹

¹AliceJardine. "Opaque Texts and Transparent Contexts: The Political Difference of Julia Kristeva." *Contemporary Literary Criticism*, edited by Lawrence J. Trudeau, vol. 367, Gale, 2015. *Literature Resource Center*

Barthes's stance is not the only evidence of the forwardness of poststructuralism. Moreover, this literary movement has been a respite to writers and thinkers who have willed for a freer expression and less opaque texts. It is not the context of "the periphery is in many cases the center."² It is rather the context in which the varieties of cultural backgrounds call upon inter-textual ability to convene thinkers on the understanding that a single interpretation of a piece of literature connotes with the singularity of the center. While the centers have been multiplied by the multiplicity of understandings, the confinement to a solitary text in the construction of meaning leads to the rigidity on world cultivation judgment. Thus, Julia Kristeva and Birgitte Huitfeldt Midttun clarify it by saying:

The concept of inter-textuality soon became Kristeva's hallmark. She wanted to show how a text always communicates with another text or other texts, in a polyphony of different voices that meet in the act of reading, which engender other, and new, interpretations of the text. Kristeva's polylogous understanding of the text and especially her rereading of literary works soon brought her into conflict with the structuralist establishment in France at the time, and through this, she became one of the groundbreaking theoreticians of the French poststructuralism.³

The above quoted passage insinuates the constant changing of any living language through the development of words due to the rise of diverse needs. Therefore, what is at stake in the poststructuralist theory is 'the death of the author,' which explores the consequences of freeing the reading process. The easiest way to kill the author resides in the consistence of theory, which: "consists of grammar, rhetoric, dialectic, poetics, hermeneutics, semiotics, grammatology, and other modes of understanding textuality."⁴

Thus, this article will be articulated around two subtitles. The first is about the flexibility forced on texts to be opened for the centrality of the reader's opinion. The reader's free use of a text that is conducive to giving to the text a meaning not meant by its author constitutes the focus of this part. The second subtitle observes the abjuration of structuralist ethos. This part emphasizes the fact that poststructuralism is not adulation. It has rather been made compulsory by the linguistic needs forced by freer expression and human civilization through cultural variations.

II. FLEXIBLE NETWORKS OF LANGUAGE GAMES IN A TEXT

The polylogue that is allowed by the poststructuralism eventually underwrites possible ways and means to reach veracity or justice, which is universally accepted according to the reading idiosyncrasies. "...we must arrive at an idea and practice of justice that is not linked to that of consensus."⁵ The existential requirements are the rules of the linguistic game. Moreover, many revolutions such as feminism have had the paradigm shift in human civilization from the turning of the twentieth century. Alice Jardine assures that:

Gilles Deleuze and Jacques Derrida would say if in different ways, that the image upon which our Western Identity and Ethics is founded—the *visage*, the human face—the one that has been heretofore White, European, and Male—is cracking apart. All that remain are simulacra and masks. For Foucault, modernity began 'when words ceased to intersect with representations and to provide a spontaneous grid for the knowledge of things'⁶

This means words in a text are no more static in meaning and do no more follow any conventional standardization.

An agent solving a problem or interpreting a piece of literature obviously is substituted by a whole arsenal of the cultural background at stake. Thus, Anna Yeatman suggests that:

A self [*which*] is discursively oriented to 'the understanding of identity as multiple and even self-contradictory' (de Lauretis 1986, 9) is clearly incapable of practicing the disciplinary self-government of a self-oriented within a culture of self-mastery (mastery by reason of the passions, instincts, or drives). The former self is one which understands and resists the exclusionary terror of self-mastery whereby the integrity of a self is established through the exclusion and repression of all that is rigidly deemed non-self. Martin and Mohanty (1986,1987), show how Mannie Bruce Pratt's autobiographical narrative enables reflection on postmodern selfhood.⁷

A reading that excludes the reader prevents the latter from grasping their voice through the process.

⁷ Anna Yeatman, *Postmodern Revisionings of the Political* (New York: Routledge, 1994), p. 119.

Because the construction of meaning to a work calls on the interpreter's cultural background, the latter gives him/herself the chance to leave a discursive watershed. Yeatman argues again that: "A non-consensualist politics of difference develops rhetorical procedures which problematize a subject speaking on behalf of another and which put a premium on subjects finding their own 'voice' within whatever politics of representation is at hand. Within this politics, subjects are understood to be discursively positioned within the conjectural historical moment of contested narratives...."⁸ This contestation drops the real quality of a duel just because of the physical presence of the author. This absence rather takes the value of the latter's death leaving only his/her imagination. And as a text is taken to be a field to enter, the reader enters the field uneventfully to sow what she intends to.

Hence, a psychological confrontation is prepeded by necessity. Barthes thinks that "Just as Einsteinian science compels us to include within the object studied the relativity of reference points, so the combined action of Marxism, Freudianism, and structuralism compels us, in literature, to relativize the relations of [scriptor,] reader, and observer (critic)."⁹

The subject in front of a text is as a critic in hermeneutics for that text. And since it is a field to enter (process), Roland Barthes finds that – the quotation is a bit longer because it encompasses a comparison between a text and work:

The text is approached and experienced in relation to the sign. The work closes upon a signified. We can attribute two modes of signification to this signified: either it is claimed to be apparent, and the work is then the object of a science of the letter, which is philology; or else this signified is said to be secret and final, and must be sought for, and then the work depends upon a hermeneutics, an interpretation (Marxist, psychoanalytic, thematic, etc.); in short, the work itself functions as a general sign, and it is natural that it should represent an institutional category of the civilization of the Sign. The Text, on the contrary, practices the infinite postponement of the signified, the Text is dilatory; its field is that of the signifier; the signifier must not be imagined as "the first part of the meaning," its material vestibule, but rather, on the contrary, as its aftermath; similarly, the signifier's infinitude does not refer to some notion of the ineffable (of an unnamable signified) but to a notion of play; the engendering of the perpetual signifier (in the fashion

of a perpetual calendar) in the field of the Text is not achieved by some organic process of maturation, or a hermeneutic process of "delving deeper," but rather by a serial movement of dislocations, overlapping variations.¹⁰

This openness of the text becomes a challenge for the subject who is willing to find her voice in the text through its interpretation. In other words, is giving the chance to draw the whole context into her own conception of life ignoring utterly the author's intent. How is it conceivable to cooperate with the author when words in the text are deployable and can easily be refastened to various meanings? Barthes furthermore finds that:

The logic governing the Text is not comprehensive 'trying to define what the work "means"' but metonymic; the activity of associations, contiguities, cross-references coincides with a liberation of symbolic energy 'if it failed him, man would die.' The work (in the best of cases) is moderately symbolic 'its [symbolics] runs short, i.e., stops;' the Text is radically symbolic: a work whose integrally symbolic nature one conceives, perceives, and receives is a text. The Text is thus restored to language; like language, it is structured but decentered, without closure 'let us note, to answer the scornful suspicion of "fashion" sometimes lodged against structuralism, that the epistemological privilege nowadays granted to language derives precisely from the fact that in it [language] we have discovered a paradoxical idea of structure: a system without end or center.'¹¹

This is to show the hermeneutic code in the text, which leads to the voice of truth because of the historical facts inherent in it. And since the author may have obviously been inspired by other texts or cultural drives, foreshadow or anticipation codes also could be found there in an empirical way; which undoubtedly would indicate the machine that helps the free flow of the narrative. It is in the same inclination that the author's meaning cyphers could be felt – the timbres of the text. But here only the voice of the author is heard not his intended meaning for the symbol of a mountain does not stand for the same implication in every cultural entity. Though the reader may feel the cultural background of the author through his use of symbols, this does not come to transfigure the reader's life conception but scientifically cultivate him about the other side of the world through the help of his own cultural background. Paula Geyh et al find that:

French philosopher Jean-Francois Lyotard argues that a skepticism toward the 'grand narratives' of modernity defines the 'postmodern condition.' This skepticism extends to any philosophy or theory,

¹¹ Ibid. p. 59.

such as Marxism, which claims to provide a complete explanation of culture and society. Lyotard argues that there is no longer any hope of a single conceptual system or discourse through which we might aspire to understand the totality of the world. Indeed, one can no longer speak about 'totality' at all. Instead, we have a plurality of worlds and multiple, often mutually incompatible discourses through which to understand them.¹²

That is evidently elucidating how both poststructuralism and postmodernism are aiming the same critical objectives which do not go for the understanding of the world through one and single discourse.

III. ABJURATION OF STRUCTURALIST ETHOS AND ITS SPLENETIC COMMENTARY

Manumitting a text for relative meanings far or near the author's is not a structuralist ethos. However, commenting a text in confined zone of meaning (unique meaning) is one of the main characteristics of this literary approach. Arnold Krupat argues that:

The truth value attributed to language when a signifier is seen to be correctly, even inherently, linked to a signified is a phenomenon which is unique to cultures which use written forms of information storage. Historically, oral cultures seem to be typically unconcerned with fixed meanings (118). However, he points out that there is a tendency among scholars of Native literatures to hold a "signified-based theory of language," or to assume that meaning is fixed and can be accurately communicated. He further writes that "as students of oral cultures and traditions, Native Americanists have in particular referred this possibility to speech and voice." I propose that King is playing off this opposition, not standing firmly in either camp, but getting the best of both of them. In this war of written versus oral words, it is not a question of which culture has possession of the Truth, but rather of which culture has the literary means of conveying it. In pitting the one narrative form against the other, King questions first whether a written text really represents an inflexible, authoritative, dogmatic version of reality, such as is being lampooned by the narrators of *Green Grass, Running Water*.¹³

The recommendation for a written text to really represent an inflexible, authoritative, dogmatic version of reality reflects the ethos of structuralism. This character

is obviously conducive to the confinement of truth into only one angle of vision and tends to annihilate the culturalism of other creative efforts from different visionary approaches. This also forces each and every reader to belong to the cultural background of a written text's author. And consequently, criticism and appreciation remain the affair of those who share the author's viewpoints and thus, the effort to make such a text bear a sign of diversified meanings remains futile and the question revolving around the problem of referentiality remains unsolved. Jakki Spicer asks in "The author is dead, long live the author: autobiography and the fantasy of the individual": "Do the contents of the book correspond to a life lived, or only to the contents of an author's imagination? What, in fact, is the relation between a life and a text?"¹⁴ The only reality is that only the cultural background of the reader that commands the understanding and creation of his related meaning becomes useless if related to the author's life. And the comment made upon such a compact text remains superficial.

The superficiality of the comment of a text remains such due to the fact that it is made solely on the structure. Moreover the comment on a text's structure has nothing to do with the latter's contents. For a splenetic commentary on a piece of literature suggests only the whim of the writer or a specific reader who has no intention of making his/her own cultural background valuable because when reading a piece of literature, it confirms or infirm what one has previously believed in. Chinyere Nwahunanya in: "Structuralism and African literature: a reevaluation" illustrates how the structure or form of a text is the only entity that should be considered in analysis/interpretation according to the tenet of structuralism:

Take for instance the "form and content" critics of African literature. Their bold statements of intentions to analyses the form and content of chosen literary artifacts end up as exercises in the exegesis of content. This is due mainly to the fact that most of such critics do not possess the tools of structural analysis which are indispensable to a stylistic analysis of form. They, therefore, end up with superficial generalizations about "tightly structured plots", "effective use of flashback", "impressive deployment of symbols" and other such vague

statements which tell us virtually nothing about the form or structure of the works being analyzed.¹⁵

Therefore, the oppugning of the ethics of structuralism becomes essential for the sake of universal covering of an author's effort. Eugene Good heart in: "Do We Need Literary Darwinism?" argues for the uniqueness and distinctiveness of a text:

Can evolutionary psychology say anything interesting about literature? My answer is that it is possible, that I am not a prophet and can't predict the future. On the basis of what I've read up to now, I must confess that I am a skeptic. Both the general understanding of literature and the interpretations of individual works are crudely reductionist. Reductionism in the natural sciences is no vice; on the contrary, it enables one discipline (for instance, physics) to explain another (chemistry). In the humanities, however, it subverts the uniqueness and complexity of works of art. Carroll's complaint about "traditional humanist criticism," (which I exemplify in his essay) is that lacking in empirical curiosity, it "operates on the level of the author's lexicon and seeks no systematic reduction to simple principles that have large general validity" (*Literary Darwinism* 213). Well, this hardly seems a deficiency. The alternative that Carroll and his fellow literary Darwinists propose is the dissolution of the individuality of a work (the very reason that we enjoy and value it) into large generalizations that remove all of its distinctive features and vitality.¹⁶

If a text cannot be interpreted by the help of another it means its author has coined it without having read other texts or might have written out of vacuum. If physics can easily help explain chemistry, it is because both are from the same core of studies field, which is science. A piece of literature is always interpreted by the guide of other culturally acceptable items that make them part and parcel of literature/fiction. "Although many critics think that Barthes pushed this manifesto-like formulation too far, this celebrated idea, now a critical commonplace, remains alluring for its implicit reminder that we rely on literary storytelling as well as documentary records for the reconstruction of not only

texts' informing intellectual contexts but also their authors' lives and deaths"¹⁷

IV. CONCLUSION

Literature has always given rise to its interpretation, but now that no argument of literary gossip goes unnoticed, it may be time to reflect a little on the activity of literary criticism. Roland Barthes (like Proust before him) launches an attack on the traditional biography-based criticism. This article is dedicated to him as a postmodern ditty. And the slinkiness of this work resides in its being subversive for a reasonable cause. If the presence of God in our minds reprieves our freedom, it has been possible to reason without including God in our quotidian life. So much as Frederic Nietzsche has helped us succeed in doing without God; Barthes is helping us to read without author through poststructuralism/postmodernism.

It is in this perspective that this article has raised firstly the point on the flexibility of poststructuralism in the networks of language games in a text. The main argument has been the description of literature as a space where all identity is lost, beginning with the very identity of the figure that writes. The death of the author marks the birth of literature, defined, precisely, as the creation of this speech, to which we cannot allocate an exact derivation.

What is important to a text is not to be found in the original thought of its author but in the individual reader's final product inferred thereof. The birth of the reader must be at the cost of the death of the author, not for its plunder but to render it universally fashionable.

The second point raised by this article has focused on the illustrations of some structuralist ways of text treatment. Some clear cut characteristics of structuralism vis-à-vis a written text and the commentary thereupon advocate solely the consideration of the form of it, neglecting utterly the contents. Theorizing the author in a position of monopolizing the means of writing, structuralism makes written text self-sufficient with concrete reality. Rather, the ambiguous aspect of this is either to refer to the author's imagination or his life in the construction of meaning. That is why it is better to refer to the text itself and with the help of one's cultural background, construct a subjective meaning to the content that will diversify the author's intention. And, thus, Roland Barthes's poststructuralist/postmodernist stance should not be taking for adulation; rather, this should be regarded as a breakthrough that stands for the world's civilizational betterment.

The Main Periods of Human Life

By Akhmet Dyussenbayev

Abstract- In 2015, the World Health Organization under the United Nations officially revised the age standards. A person is now considered young before 44 years of age. According to the new age classification, the young age is from 25 to 44, middle age is 44-60, elderly age is 60-75, senile age is 75-90 and long-livers are after 90. This international standard is made without taking into account the objective regularities of the development physiology and psychology throughout the whole life in the course of rapid growth in youth, smooth development in mature age and the subsequent gradual aging of the human body.

Keywords: periods of life, infancy, childhood, youth, maturity, old age, long-livers, development physiology.

Abstract- In 2015, the World Health Organization under the United Nations officially revised the age standards. A person is now considered young before 44 years of age. According to the new age classification, the young age is from 25 to 44, middle age is 44-60, elderly age is 60-75, senile age is 75-90 and long-livers are after 90. This international standard is made without taking into account the objective regularities of the development physiology and psychology throughout the whole life in the course of rapid growth in youth, smooth development in mature age and the subsequent gradual aging of the human body.

Keywords: *periods of life, infancy, childhood, youth, maturity, old age, long-livers, development physiology.*

I. INTRODUCTION

From the earliest times, people lay special emphasis on the milestone anniversaries of ages of 20, 25, 30, 40, 50, 60, 70, 75 and so on. All kinds of jubilee celebrations and events are held on this occasion. But, in fact, the generally accepted "zero" and "five" dates do not fully correspond to the real stages of human life, the stages of biological and social maturity. The age stereotypes established in our society are not expedient in all aspects.

The most relevant criterion in this issue is the 12-years chronological segment of the lunar calendar. The full cycle of the lunar calendar consists of 12 years. It is linked to the movement of Jupiter, which completely passes the circle of Zodiac for 12 years. Here, from ancient times, every year is strictly symbolically marked with the name of a particular animal having a certain meaning. Years: "mouse", "cow", "snow leopard", "hare", "wolf/dragon", "snake", "horse", "sheep", "monkey", "chicken", "dog" and "boar". Since the last century lunar calendar has become more in-demand and now the interest to it is growing all over the world.

The attitude towards age among different people was developing in different ways. The differentiation of ages and the peculiarities imposed by it on the relations between people are present in all countries. The problem in question, with all seeming banality, excited scientists at all times. V.G. Belinsky asserted in this regard: "A man has its epochs of growth, not complying with which, any development in it can be put out".

Psycho-physiological changes from one stage of life to another can be seen, as the saying runs, with

the naked eye. There is a correlation – interrelationship between the age of a person and his temperament, character type and the style of behavior. Under optimal conditions, the young people's character is predominantly formed by 17 years of age. Achievement of personhood comes at 25 years of age. Three key periods of life correspond to three typological groups of characters: impulsive - youth, conformal - maturity and critical - old age. Impulsive type is assertive, active, energetic. The conformal type is flexible, pliable, cautious. Critical type is principled, picky, rational.

As this is a model, the question here is about tendencies, and the borders of age periods and stages are conditional with insignificant fluctuations. This is a kind of ideal to which a person should strive to the best of his/her abilities.

II. INFANCY PERIOD

Only one year is given to the most expressive, that is, a loud, noisy, tearful and hysterical period of life, but this is a most intensive time period of youth. During infancy: only 1 year from the moment of birth a child grows and develops extremely quickly, and this infancy - including the intrauterine period being studied by the independent science of embryology – is in its importance is equivalent to the subsequent 12th years of age. With reference to this question, A. Schopenhauer noted very aptly: "Hours of the boy are longer than the days of the old man".

III. CHILDHOOD PERIOD

In the childhood, there is the highest general physical activity from 1 to 13 years of age. We can conventionally split it into three stages: nursery (1-3 years), kindergarten (3-7 years) and elementary school (7-13 years) when the mental emotionality gradually decreases and infancy dynamism becomes already more conscious and less subconscious than before. Ambrose Bierce has quoted in an original way in this regard: "Childhood: the period of human life intermediate between the idiocy of infancy and the folly of youth - two removes from the sin of manhood and three from the remorse of age".

IV. PERIOD OF YOUTH

In the mobile youth from 13 to 25 years of age, while the high dynamism of the psyche is still present, but nevertheless, the plasticity of the psyche is stealthily and gradually stealing up. At this time, two valuable

*Author: Institute of physiology of man and animals of the Ministry of education and science, Republic of Kazakhstan.
e-mail: ahmet_rd@mail.ru*

properties of the character match up perfectly: impulsiveness and co formality. This period also consists of three stages: adolescence (13-17 years), youth (17-21 years) and the crown of youth (21-25 years). If the first stage is dominated by dynamism of the psyche, then on the third stage, its plasticity prevails. Mark Twain said: "When I was a boy of fourteen, my father was so ignorant I could hardly stand to have the old man around. But when I got to be twenty-one, I was astonished at how much he had learned in seven years".

According to physiological and psychological parameters, around half of the overall development of

mental abilities in children occurs in the first three years of life, one third - between three and seven years, the rest - between seven and seventeen years. These years are not less important for the formation of an emotional sphere for the whole subsequent life. Ideally, the meaning of a person's life is not in the number of years lived, but in creative works to the benefit of others.

This is evidenced by the life of remarkable people. For instance, Joan of Arclived for 19 years, Evariste Galois - 21 years.

Redacted

V. MATURITY PERIOD

It consists of three periods: the beginning of maturity, the midst of maturity and the end of maturity. At a mature age, from 25 to 61, the body reaction, the speed of physical processes is markedly inferior to the previous period, but there is more rationality and more pliability in the behavior strategy than in youth. A person becomes more cautious, reserved and attentive, although somewhat evasive, and begins to confidently use his/her own life experience. When the sunset of youth sets in, then the dawn of maturity comes.

a) *The Stage of Beginning of Maturity*

The initial period of maturity of 25-37 years of age is more characterized by the combination of a high dynamism of mental processes with behavior pliability, or, to put it another way, there is an obvious plastic manifestation of the psyche. This stage is most productive in terms of creation. This is exactly the age when gifted people most often experience the rise of unbridled intellectual abilities. A vivid example of this is the life and work of great people.

The following people did not overcome the popularly so-called "fateful age*": Niels Abel lived 26 years, M.Yu. Lermontov (26), Ch.Ch. Valikhanov (29),

Bruce Lee (32), Alexander the Great (32), Yu.A. Gagarin (34), Wolfgang Amadeus Mozart (35), George Gordon Byron (36), Heinrich Hertz (36), Sadi Carnot (36), Marilyn Monroe (36), Diane Spencer (36).

b) *The Stage of the Midst of Maturity*

For the middle period of maturity at 37-49 years of age, the compromise behavior is mostly typical. This is the "golden time", when a person has accumulated enough knowledge, life experience, professional skills and reached the peak of his/her potential abilities. This is a peak of social maturity and career, the age of really deft leaders.

The following people did not reach age of half a century: Vincent Van Gogh lived 37 years, Arthur Rambo (37), A.S. Pushkin (37), Blaise Pascal (39), Ernesto Che Guevara (39), Jack London (40), John Lennon (40), Fernan Magellan (40), Joe Dassin (42), Johann Schiller (45), Pierre Curie (46), Albert Camus (46), John Kennedy (46), Simon Bolivar (47), Horatio Nelson (47), Edith Piaf (47).

c) *The Stage of the End of Maturity*

The period of full maturity, that is, a considerable age of 49-61 is more characterized by still flexible, but somewhat sluggish behavior, that is, the

sub-plasticity of the psyche. In fact, this is the post-culminating stage, when a person becomes less convinced and more cautious than before, acquires staidness and external solidity, begins to look back nostalgically for the first time, recall the irretrievable years of youth, and moreover in some cases trying to act like impulsive young people.

The following people lived for around half a century: Thomas Aquinas lived 49 years, James Cook (50), Michael Jackson (50), Napoleon I Bonaparte (51), Jean-Baptiste Molière (51), Honore de Balzac (51), William Shakespeare (57), Christopher Columbus (54), Ludwig Beethoven (56), Abraham Lincoln (56), Steve Jobs (56), Thomas More (57), Jeffrey Chaucer (57), Charles Dickens (58), George Harrison (58), Heinrich Heine (58), Gustave Flaubert (58), Stendhal (59), Oliver Cromwell (59), Richard Arkwright (59).

VI. PRESENILE PERIOD

The tactical behavior among the elderly people of 61-73 years of age. During this time a person is inclined to teach others, to philosophize and even too much at times. Sometimes these "wise men" are even left by their own children so that the old people involuntarily reach out for their grandchildren. On the other hand, people really accumulate a lot of knowledge and great life experience by these years. This is the venerable age and such people deserve respect in the family and society. But, being "unofficial" people, from the outside they look intrusive in a way.

To label all people of this and later ages as conservative is groundless. Conservatism manifests itself in people of all ages and is predetermined not only by psychological peculiarities. Discretion and caution should not be confused with it.

The following people lived on Earth: Georg Hegel 61, Andre-Marie Ampere (61), Luigi Galvani (61), Gregor Mendel (61), Ernest Hemingway (61), Giovanni Boccaccio (62), Robert Oppenheimer (62), Rembrandt (63), Alfred Nobel (63), Franklin Roosevelt (63), Karl Bosch (65), Ernest Rutherford (66), Dale Carnegie (66), Leonardo da Vinci (67), George Washington (67), Adam Smith (67), Nicolaus Copernicus (70).

VII. SENILE PERIOD

The senile people of 73-85 years of age are firmly judgmental. This is the time when a person becomes secluded, thoughtful and critical more often or self-critical more less often. The character increasingly acquires the features of a stubborn and convinced introvert, that is, a person becomes converted into his/her inner world. The high dynamism of the psychic activity is replaced with the inertia of psychophysiological processes. This is the age of wise men - the judicious people, whose motto is "second thoughts

are best!" People of this age group avoid noisy and cheerful parties as well as clothes of bright and vibrant colors. They prefer solitude; they criticize everyone, in particular, the young people, which is why they are called grumblers.

The following people lived much longer: Charles Darwin 73, Akhmet Yassawi (73), Howard Aiken (73), Alexander Fleming (73), Jawaharlal Nehru (74), Archimedes (75), Alexander Bell (75), Albert Einstein (76), Niels Bohr (77), Wilhelm Roentgen (77), John Tolkien (81), Sigmund Freud (83), Isaac Newton (84).

VIII. THE ELDERLY PERIOD

The elderly people older than 85-97 years of age are sentimental as a rule. Mostly depressive style of behavior characteristic of long-livers is a mirror reflection of the expressive infancy with the opposite sign because the redundantly increased emotionality of the psyche, while fading away, changes to sensitivity, that is, being sensual and easy vulnerable, when there are no tears in eyes as it happens with infants but a fragile hypochondriac soul is crying in secret in some cases.

There are fewer and fewer of those who have been given a chance of longevity: Betty Friedan lived 85 years, James Madison (85), Zelman Waksman (85), Oscar Monet (86), Theresa Calcutta (87), Gabriel Marquez (87), Margaret Thatcher (87), Gustav Hertz (88), Charlie Chaplin (88), Akira Kurosawa (88), Max Planck (89), Winston Churchill (90), Pablo Picasso (91), Linus Pauling (93), Charles Sherrington (94), Charles Huggins (95), John Rockefeller (97).

The period of the elderly age begins at 85 and there is just a little over one "circle" - a 12-year segment cycle from this peak to 100 years of age. This is a lot of the extreme old age. The lot, which is neither easy nor simple.

According to the gerontologists' hypothesis, the maximum life expectancy can reach up to 125 years and according to the Bible - up to 120 ("And the Lord said: My Spirit will not contend with humans forever, for they are mortal; their days will be a hundred and twenty years" (Genesis 6 : 3).

The periods of life fit quite accurately into the 12-year cycle of the lunar calendar, where each circle means a "segment". And if one follows this calculation, it is easy to calculate that the peak of social maturity falls on the 43rd year of life and maturity ends at 61, the period of old age begins with 73 years of age. Apparently for this reason, the Japanese and Koreans celebrate 1 year and the jubilee in 61 not recognizing the "zero" and "five" dates.

Symbolically, the childhood ends at about 13 years old, when physiological maturity begins, one of the important criteria of which is the beginning of puberty. Youth ends at 25 years of age, and it's not just a

quarter of a century, but the peak of biological maturity, which is followed by the social maturity, when a person is able to make independent decisions because the brain already has enough necessary and useful information for this.

Reduction of adult age of young people, that is, when they get out of the influence of parents from the age of 21 to 18-19 is a manifestation of a modern dynamic era. However, do children and their parents realize that over the age of 13 they are no longer little kids, that is, not children? Do young people themselves and their relatives understand that at the age of 25 they have already crossed the threshold of maturity? Who does a person consider himself at the age of 50 - young, mature or old? And after 61, he/she thinks he is 73? In a busy world, we do not attach much importance to it and in a lot of families this important issue is not considered seriously. As a result, we get: the young people are at the age of 40, children are at the age of 20, the elderly are at the age of 50. It is notable how Voltaire said: "He who has not the spirit of this age, has all the misery of it".

Parents often bate demands towards their family members by sparing them, cherishing them simply for no reason. This is nothing but a disservice, as a result of which not in frequently we get irresponsible overgrown children. There is only one step to the psychology of a dependent. The period of maturity, which is emphasized among all people, in particular its first stage falling on the years of the achievement of personhood (25-37 years), is most important both for an individual and society. Here it is very important to separate adulthood from pseudo adulthood, when young men or girls who have barely emerged from adolescence to pretend independent behave deliberately freely, boldly and sometimes aggressively. The criterion of social maturity is the mastering of a certain set of social roles by a young man, which characterize an adult.

Each person grows and develops and then grows old imperceptibly for people around, which is quite natural. Therefore, the boundaries of age periods are blurred. We usually say: 2-3 years of age - it's time for the child to go to kindergarten, 6-7 years of age - to school, 17-18 years - it's time to continue studying or start working. These standards have been learned by the society a long time and there are no problems about it.

The situation is different with respect to subsequent age periods when there are no such generally accepted criteria. We have no generally accepted life stages except round dates from 17 till 63 years of age, which often leads to confusion. Children, parents, teachers and the whole society often bate demands to a person in this context. However, we often

say: "You are so old and you are still a child!" which often sounds not convincing, unfounded as it is not reasoned in the form of a social standard. Therefore, it is necessary to develop a uniform age standard taking into account the achievements of gerontology so that people know at what stage of life they live, study or work.

FELLOWS

FELLOW OF ASSOCIATION OF RESEARCH SOCIETY IN HUMAN SCIENCE (FARSHS)

Global Journals Incorporate (USA) is accredited by Open Association of Research Society (OARS), U.S.A and in turn, awards “FARSHS” title to individuals. The 'FARSHS' title is accorded to a selected professional after the approval of the Editor-in-Chief/Editorial Board Members/Dean.

- The “FARSHS” is a dignified title which is accorded to a person’s name viz. Dr. John E. Hall, Ph.D., FARSS or William Walldroff, M.S., FARSHS.

FARSHS accrediting is an honor. It authenticates your research activities. After recognition as FARSHS, you can add 'FARSHS' title with your name as you use this recognition as additional suffix to your status. This will definitely enhance and add more value and reputation to your name. You may use it on your professional Counseling Materials such as CV, Resume, and Visiting Card etc.

The following benefits can be availed by you only for next three years from the date of certification:

FARSHS designated members are entitled to avail a 40% discount while publishing their research papers (of a single author) with Global Journals Incorporation (USA), if the same is accepted by Editorial Board/Peer Reviewers. If you are a main author or co-author in case of multiple authors, you will be entitled to avail discount of 10%.

Once FARSHS title is accorded, the Fellow is authorized to organize symposium/seminar/conference on behalf of Global Journal Incorporation (USA). The Fellow can also participate in conference/seminar/symposium organized by another institution as representative of Global Journal. In both the cases, it is mandatory for him to discuss with us and obtain our consent.

You may join as member of the Editorial Board of Global Journals Incorporation (USA) after successful completion of three years as Fellow and as Peer Reviewer. In addition, it is also desirable that you should organize seminar/symposium/conference at least once.

We shall provide you intimation regarding launching of e-version of journal of your stream time to time. This may be utilized in your library for the enrichment of knowledge of your students as well as it can also be helpful for the concerned faculty members.

The FARSHS can go through standards of OARS. You can also play vital role if you have any suggestions so that proper amendment can take place to improve the same for the benefit of entire research community.

As FARSHS, you will be given a renowned, secure and free professional email address with 100 GB of space e.g. johnhall@globaljournals.org. This will include Webmail, Spam Assassin, Email Forwarders, Auto-Responders, Email Delivery Route tracing, etc.

The FARSHS will be eligible for a free application of standardization of their researches. Standardization of research will be subject to acceptability within stipulated norms as the next step after publishing in a journal. We shall depute a team of specialized research professionals who will render their services for elevating your researches to next higher level, which is worldwide open standardization.

The FARSHS member can apply for grading and certification of standards of the educational and Institutional Degrees to Open Association of Research, Society U.S.A. Once you are designated as FARSHS, you may send us a scanned copy of all of your credentials. OARS will verify, grade and certify them. This will be based on your academic records, quality of research papers published by you, and some more criteria. After certification of all your credentials by OARS, they will be published on your Fellow Profile link on website <https://associationofresearch.org> which will be helpful to upgrade the dignity.

The FARSHS members can avail the benefits of free research podcasting in Global Research Radio with their research documents. After publishing the work, (including published elsewhere worldwide with proper authorization) you can upload your research paper with your recorded voice or you can utilize chargeable services of our professional RJs to record your paper in their voice on request.

The FARSHS member also entitled to get the benefits of free research podcasting of their research documents through video clips. We can also streamline your conference videos and display your slides/ online slides and online research video clips at reasonable charges, on request.

The FARSHS is eligible to earn from sales proceeds of his/her researches/reference/review Books or literature, while publishing with Global Journals. The FARSHS can decide whether he/she would like to publish his/her research in a closed manner. In this case, whenever readers purchase that individual research paper for reading, maximum 60% of its profit earned as royalty by Global Journals, will be credited to his/her bank account. The entire entitled amount will be credited to his/her bank account exceeding limit of minimum fixed balance. There is no minimum time limit for collection. The FARSS member can decide its price and we can help in making the right decision.

The FARSHS member is eligible to join as a paid peer reviewer at Global Journals Incorporation (USA) and can get remuneration of 15% of author fees, taken from the author of a respective paper. After reviewing 5 or more papers you can request to transfer the amount to your bank account.

MEMBER OF ASSOCIATION OF RESEARCH SOCIETY IN HUMAN SCIENCE (MARSHS)

The ' MARSHS ' title is accorded to a selected professional after the approval of the Editor-in-Chief / Editorial Board Members/Dean.

The “MARSHS” is a dignified ornament which is accorded to a person’s name viz. Dr John E. Hall, Ph.D., MARSHS or William Walldroff, M.S., MARSHS.

MARSHS accrediting is an honor. It authenticates your research activities. After becoming MARSHS, you can add 'MARSHS' title with your name as you use this recognition as additional suffix to your status. This will definitely enhance and add more value and repute to your name. You may use it on your professional Counseling Materials such as CV, Resume, Visiting Card and Name Plate etc.

The following benefits can be availed by you only for next three years from the date of certification.

MARSHS designated members are entitled to avail a 25% discount while publishing their research papers (of a single author) in Global Journals Inc., if the same is accepted by our Editorial Board and Peer Reviewers. If you are a main author or co-author of a group of authors, you will get discount of 10%.

As MARSHS, you will be given a renowned, secure and free professional email address with 30 GB of space e.g. johnhall@globaljournals.org. This will include Webmail, Spam Assassin, Email Forwarders, Auto-Responders, Email Delivery Route tracing, etc.

We shall provide you intimation regarding launching of e-version of journal of your stream time to time. This may be utilized in your library for the enrichment of knowledge of your students as well as it can also be helpful for the concerned faculty members.

The MARSHS member can apply for approval, grading and certification of standards of their educational and Institutional Degrees to Open Association of Research, Society U.S.A.

Once you are designated as MARSHS, you may send us a scanned copy of all of your credentials. OARS will verify, grade and certify them. This will be based on your academic records, quality of research papers published by you, and some more criteria.

It is mandatory to read all terms and conditions carefully.

AUXILIARY MEMBERSHIPS

Institutional Fellow of Open Association of Research Society (USA) - OARS (USA)

Global Journals Incorporation (USA) is accredited by Open Association of Research Society, U.S.A (OARS) and in turn, affiliates research institutions as “Institutional Fellow of Open Association of Research Society” (IFOARS).

The “FARSC” is a dignified title which is accorded to a person’s name viz. Dr. John E. Hall, Ph.D., FARSC or William Walldroff, M.S., FARSC.

The IFOARS institution is entitled to form a Board comprised of one Chairperson and three to five board members preferably from different streams. The Board will be recognized as “Institutional Board of Open Association of Research Society”-(IBOARS).

The Institute will be entitled to following benefits:

The IBOARS can initially review research papers of their institute and recommend them to publish with respective journal of Global Journals. It can also review the papers of other institutions after obtaining our consent. The second review will be done by peer reviewer of Global Journals Incorporation (USA) The Board is at liberty to appoint a peer reviewer with the approval of chairperson after consulting us.

The author fees of such paper may be waived off up to 40%.

The Global Journals Incorporation (USA) at its discretion can also refer double blind peer reviewed paper at their end to the board for the verification and to get recommendation for final stage of acceptance of publication.

The IBOARS can organize symposium/seminar/conference in their country on behalf of Global Journals Incorporation (USA)-OARS (USA). The terms and conditions can be discussed separately.

The Board can also play vital role by exploring and giving valuable suggestions regarding the Standards of “Open Association of Research Society, U.S.A (OARS)” so that proper amendment can take place for the benefit of entire research community. We shall provide details of particular standard only on receipt of request from the Board.

Journals Research
inducing researches

The board members can also join us as Individual Fellow with 40% discount on total fees applicable to Individual Fellow. They will be entitled to avail all the benefits as declared. Please visit Individual Fellow-sub menu of GlobalJournals.org to have more relevant details.

We shall provide you intimation regarding launching of e-version of journal of your stream time to time. This may be utilized in your library for the enrichment of knowledge of your students as well as it can also be helpful for the concerned faculty members.

After nomination of your institution as “Institutional Fellow” and constantly functioning successfully for one year, we can consider giving recognition to your institute to function as Regional/Zonal office on our behalf. The board can also take up the additional allied activities for betterment after our consultation.

The following entitlements are applicable to individual Fellows:

Open Association of Research Society, U.S.A (OARS) By-laws states that an individual Fellow may use the designations as applicable, or the corresponding initials. The Credentials of individual Fellow and Associate designations signify that the individual has gained knowledge of the fundamental concepts. One is magnanimous and proficient in an expertise course covering the professional code of conduct, and follows recognized standards of practice.

Open Association of Research Society (US)/ Global Journals Incorporation (USA), as described in Corporate Statements, are educational, research publishing and professional membership organizations. Achieving our individual Fellow or Associate status is based mainly on meeting stated educational research requirements.

Disbursement of 40% Royalty earned through Global Journals : Researcher = 50%, Peer Reviewer = 37.50%, Institution = 12.50% E.g. Out of 40%, the 20% benefit should be passed on to researcher, 15 % benefit towards remuneration should be given to a reviewer and remaining 5% is to be retained by the institution.

We shall provide print version of 12 issues of any three journals [as per your requirement] out of our 38 journals worth \$ 2376 USD.

Other:

The individual Fellow and Associate designations accredited by Open Association of Research Society (US) credentials signify guarantees following achievements:

- The professional accredited with Fellow honor, is entitled to various benefits viz. name, fame, honor, regular flow of income, secured bright future, social status etc.

- In addition to above, if one is single author, then entitled to 40% discount on publishing research paper and can get 10% discount if one is co-author or main author among group of authors.
- The Fellow can organize symposium/seminar/conference on behalf of Global Journals Incorporation (USA) and he/she can also attend the same organized by other institutes on behalf of Global Journals.
- The Fellow can become member of Editorial Board Member after completing 3yrs.
- The Fellow can earn 60% of sales proceeds from the sale of reference/review books/literature/publishing of research paper.
- Fellow can also join as paid peer reviewer and earn 15% remuneration of author charges and can also get an opportunity to join as member of the Editorial Board of Global Journals Incorporation (USA)
- • This individual has learned the basic methods of applying those concepts and techniques to common challenging situations. This individual has further demonstrated an in-depth understanding of the application of suitable techniques to a particular area of research practice.

Note :

//

- In future, if the board feels the necessity to change any board member, the same can be done with the consent of the chairperson along with anyone board member without our approval.
- In case, the chairperson needs to be replaced then consent of 2/3rd board members are required and they are also required to jointly pass the resolution copy of which should be sent to us. In such case, it will be compulsory to obtain our approval before replacement.
- In case of “Difference of Opinion [if any]” among the Board members, our decision will be final and binding to everyone.

//

PROCESS OF SUBMISSION OF RESEARCH PAPER

The Area or field of specialization may or may not be of any category as mentioned in 'Scope of Journal' menu of the GlobalJournals.org website. There are 37 Research Journal categorized with Six parental Journals GJCST, GJMR, GJRE, GJMBR, GJSFR, GJHSS. For Authors should prefer the mentioned categories. There are three widely used systems UDC, DDC and LCC. The details are available as 'Knowledge Abstract' at Home page. The major advantage of this coding is that, the research work will be exposed to and shared with all over the world as we are being abstracted and indexed worldwide.

The paper should be in proper format. The format can be downloaded from first page of 'Author Guideline' Menu. The Author is expected to follow the general rules as mentioned in this menu. The paper should be written in MS-Word Format (*.DOC, *.DOCX).

The Author can submit the paper either online or offline. The authors should prefer online submission. Online Submission: There are three ways to submit your paper:

(A) (I) First, register yourself using top right corner of Home page then Login. If you are already registered, then login using your username and password.

(II) Choose corresponding Journal.

(III) Click 'Submit Manuscript'. Fill required information and Upload the paper.

(B) If you are using Internet Explorer, then Direct Submission through Homepage is also available.

(C) If these two are not convenient, and then email the paper directly to dean@globaljournals.org.

Offline Submission: Author can send the typed form of paper by Post. However, online submission should be preferred.

PREFERRED AUTHOR GUIDELINES

MANUSCRIPT STYLE INSTRUCTION (Must be strictly followed)

Page Size: 8.27" X 11"

- Left Margin: 0.65
- Right Margin: 0.65
- Top Margin: 0.75
- Bottom Margin: 0.75
- Font type of all text should be Swis 721 Lt BT.
- Paper Title should be of Font Size 24 with one Column section.
- Author Name in Font Size of 11 with one column as of Title.
- Abstract Font size of 9 Bold, "Abstract" word in Italic Bold.
- Main Text: Font size 10 with justified two columns section
- Two Column with Equal Column with of 3.38 and Gaping of .2
- First Character must be three lines Drop capped.
- Paragraph before Spacing of 1 pt and After of 0 pt.
- Line Spacing of 1 pt
- Large Images must be in One Column
- Numbering of First Main Headings (Heading 1) must be in Roman Letters, Capital Letter, and Font Size of 10.
- Numbering of Second Main Headings (Heading 2) must be in Alphabets, Italic, and Font Size of 10.

You can use your own standard format also.

Author Guidelines:

1. General,
2. Ethical Guidelines,
3. Submission of Manuscripts,
4. Manuscript's Category,
5. Structure and Format of Manuscript,
6. After Acceptance.

1. GENERAL

Before submitting your research paper, one is advised to go through the details as mentioned in following heads. It will be beneficial, while peer reviewer justify your paper for publication.

Scope

The Global Journals Inc. (US) welcome the submission of original paper, review paper, survey article relevant to the all the streams of Philosophy and knowledge. The Global Journals Inc. (US) is parental platform for Global Journal of Computer Science and Technology, Researches in Engineering, Medical Research, Science Frontier Research, Human Social Science, Management, and Business organization. The choice of specific field can be done otherwise as following in Abstracting and Indexing Page on this Website. As the all Global

Journals Inc. (US) are being abstracted and indexed (in process) by most of the reputed organizations. Topics of only narrow interest will not be accepted unless they have wider potential or consequences.

2. ETHICAL GUIDELINES

Authors should follow the ethical guidelines as mentioned below for publication of research paper and research activities.

Papers are accepted on strict understanding that the material in whole or in part has not been, nor is being, considered for publication elsewhere. If the paper once accepted by Global Journals Inc. (US) and Editorial Board, will become the copyright of the Global Journals Inc. (US).

Authorship: The authors and coauthors should have active contribution to conception design, analysis and interpretation of findings. They should critically review the contents and drafting of the paper. All should approve the final version of the paper before submission

The Global Journals Inc. (US) follows the definition of authorship set up by the Global Academy of Research and Development. According to the Global Academy of R&D authorship, criteria must be based on:

- 1) Substantial contributions to conception and acquisition of data, analysis and interpretation of the findings.
- 2) Drafting the paper and revising it critically regarding important academic content.
- 3) Final approval of the version of the paper to be published.

All authors should have been credited according to their appropriate contribution in research activity and preparing paper. Contributors who do not match the criteria as authors may be mentioned under Acknowledgement.

Acknowledgements: Contributors to the research other than authors credited should be mentioned under acknowledgement. The specifications of the source of funding for the research if appropriate can be included. Suppliers of resources may be mentioned along with address.

Appeal of Decision: The Editorial Board's decision on publication of the paper is final and cannot be appealed elsewhere.

Permissions: It is the author's responsibility to have prior permission if all or parts of earlier published illustrations are used in this paper.

Please mention proper reference and appropriate acknowledgements wherever expected.

If all or parts of previously published illustrations are used, permission must be taken from the copyright holder concerned. It is the author's responsibility to take these in writing.

Approval for reproduction/modification of any information (including figures and tables) published elsewhere must be obtained by the authors/copyright holders before submission of the manuscript. Contributors (Authors) are responsible for any copyright fee involved.

3. SUBMISSION OF MANUSCRIPTS

Manuscripts should be uploaded via this online submission page. The online submission is most efficient method for submission of papers, as it enables rapid distribution of manuscripts and consequently speeds up the review procedure. It also enables authors to know the status of their own manuscripts by emailing us. Complete instructions for submitting a paper is available below.

Manuscript submission is a systematic procedure and little preparation is required beyond having all parts of your manuscript in a given format and a computer with an Internet connection and a Web browser. Full help and instructions are provided on-screen. As an author, you will be prompted for login and manuscript details as Field of Paper and then to upload your manuscript file(s) according to the instructions.

To avoid postal delays, all transaction is preferred by e-mail. A finished manuscript submission is confirmed by e-mail immediately and your paper enters the editorial process with no postal delays. When a conclusion is made about the publication of your paper by our Editorial Board, revisions can be submitted online with the same procedure, with an occasion to view and respond to all comments.

Complete support for both authors and co-author is provided.

4. MANUSCRIPT'S CATEGORY

Based on potential and nature, the manuscript can be categorized under the following heads:

Original research paper: Such papers are reports of high-level significant original research work.

Review papers: These are concise, significant but helpful and decisive topics for young researchers.

Research articles: These are handled with small investigation and applications

Research letters: The letters are small and concise comments on previously published matters.

5. STRUCTURE AND FORMAT OF MANUSCRIPT

The recommended size of original research paper is less than seven thousand words, review papers fewer than seven thousands words also. Preparation of research paper or how to write research paper, are major hurdle, while writing manuscript. The research articles and research letters should be fewer than three thousand words, the structure original research paper; sometime review paper should be as follows:

Papers: These are reports of significant research (typically less than 7000 words equivalent, including tables, figures, references), and comprise:

- (a) Title should be relevant and commensurate with the theme of the paper.
- (b) A brief Summary, "Abstract" (less than 150 words) containing the major results and conclusions.
- (c) Up to ten keywords, that precisely identifies the paper's subject, purpose, and focus.
- (d) An Introduction, giving necessary background excluding subheadings; objectives must be clearly declared.
- (e) Resources and techniques with sufficient complete experimental details (wherever possible by reference) to permit repetition; sources of information must be given and numerical methods must be specified by reference, unless non-standard.
- (f) Results should be presented concisely, by well-designed tables and/or figures; the same data may not be used in both; suitable statistical data should be given. All data must be obtained with attention to numerical detail in the planning stage. As reproduced design has been recognized to be important to experiments for a considerable time, the Editor has decided that any paper that appears not to have adequate numerical treatments of the data will be returned un-refereed;
- (g) Discussion should cover the implications and consequences, not just recapitulating the results; conclusions should be summarizing.
- (h) Brief Acknowledgements.
- (i) References in the proper form.

Authors should very cautiously consider the preparation of papers to ensure that they communicate efficiently. Papers are much more likely to be accepted, if they are cautiously designed and laid out, contain few or no errors, are summarizing, and be conventional to the approach and instructions. They will in addition, be published with much less delays than those that require much technical and editorial correction.

The Editorial Board reserves the right to make literary corrections and to make suggestions to improve brevity.

It is vital, that authors take care in submitting a manuscript that is written in simple language and adheres to published guidelines.

Format

Language: The language of publication is UK English. Authors, for whom English is a second language, must have their manuscript efficiently edited by an English-speaking person before submission to make sure that, the English is of high excellence. It is preferable, that manuscripts should be professionally edited.

Standard Usage, Abbreviations, and Units: Spelling and hyphenation should be conventional to The Concise Oxford English Dictionary. Statistics and measurements should at all times be given in figures, e.g. 16 min, except for when the number begins a sentence. When the number does not refer to a unit of measurement it should be spelt in full unless, it is 160 or greater.

Abbreviations supposed to be used carefully. The abbreviated name or expression is supposed to be cited in full at first usage, followed by the conventional abbreviation in parentheses.

Metric SI units are supposed to generally be used excluding where they conflict with current practice or are confusing. For illustration, 1.4 l rather than $1.4 \times 10^{-3} \text{ m}^3$, or 4 mm somewhat than $4 \times 10^{-3} \text{ m}$. Chemical formula and solutions must identify the form used, e.g. anhydrous or hydrated, and the concentration must be in clearly defined units. Common species names should be followed by underlines at the first mention. For following use the generic name should be constricted to a single letter, if it is clear.

Structure

All manuscripts submitted to Global Journals Inc. (US), ought to include:

Title: The title page must carry an instructive title that reflects the content, a running title (less than 45 characters together with spaces), names of the authors and co-authors, and the place(s) wherever the work was carried out. The full postal address in addition with the e-mail address of related author must be given. Up to eleven keywords or very brief phrases have to be given to help data retrieval, mining and indexing.

Abstract, used in Original Papers and Reviews:

Optimizing Abstract for Search Engines

Many researchers searching for information online will use search engines such as Google, Yahoo or similar. By optimizing your paper for search engines, you will amplify the chance of someone finding it. This in turn will make it more likely to be viewed and/or cited in a further work. Global Journals Inc. (US) have compiled these guidelines to facilitate you to maximize the web-friendliness of the most public part of your paper.

Key Words

A major linchpin in research work for the writing research paper is the keyword search, which one will employ to find both library and Internet resources.

One must be persistent and creative in using keywords. An effective keyword search requires a strategy and planning a list of possible keywords and phrases to try.

Search engines for most searches, use Boolean searching, which is somewhat different from Internet searches. The Boolean search uses "operators," words (and, or, not, and near) that enable you to expand or narrow your affords. Tips for research paper while preparing research paper are very helpful guideline of research paper.

Choice of key words is first tool of tips to write research paper. Research paper writing is an art. A few tips for deciding as strategically as possible about keyword search:

- One should start brainstorming lists of possible keywords before even begin searching. Think about the most important concepts related to research work. Ask, "What words would a source have to include to be truly valuable in research paper?" Then consider synonyms for the important words.
- It may take the discovery of only one relevant paper to let steer in the right keyword direction because in most databases, the keywords under which a research paper is abstracted are listed with the paper.
- One should avoid outdated words.

Keywords are the key that opens a door to research work sources. Keyword searching is an art in which researcher's skills are bound to improve with experience and time.

Numerical Methods: Numerical methods used should be clear and, where appropriate, supported by references.

Acknowledgements: Please make these as concise as possible.

References

References follow the Harvard scheme of referencing. References in the text should cite the authors' names followed by the time of their publication, unless there are three or more authors when simply the first author's name is quoted followed by et al. unpublished work has to only be cited where necessary, and only in the text. Copies of references in press in other journals have to be supplied with submitted typescripts. It is necessary that all citations and references be carefully checked before submission, as mistakes or omissions will cause delays.

References to information on the World Wide Web can be given, but only if the information is available without charge to readers on an official site. Wikipedia and Similar websites are not allowed where anyone can change the information. Authors will be asked to make available electronic copies of the cited information for inclusion on the Global Journals Inc. (US) homepage at the judgment of the Editorial Board.

The Editorial Board and Global Journals Inc. (US) recommend that, citation of online-published papers and other material should be done via a DOI (digital object identifier). If an author cites anything, which does not have a DOI, they run the risk of the cited material not being noticeable.

The Editorial Board and Global Journals Inc. (US) recommend the use of a tool such as Reference Manager for reference management and formatting.

Tables, Figures and Figure Legends

Tables: Tables should be few in number, cautiously designed, uncrowned, and include only essential data. Each must have an Arabic number, e.g. Table 4, a self-explanatory caption and be on a separate sheet. Vertical lines should not be used.

Figures: Figures are supposed to be submitted as separate files. Always take in a citation in the text for each figure using Arabic numbers, e.g. Fig. 4. Artwork must be submitted online in electronic form by e-mailing them.

Preparation of Electronic Figures for Publication

Even though low quality images are sufficient for review purposes, print publication requires high quality images to prevent the final product being blurred or fuzzy. Submit (or e-mail) EPS (line art) or TIFF (halftone/photographs) files only. MS PowerPoint and Word Graphics are unsuitable for printed pictures. Do not use pixel-oriented software. Scans (TIFF only) should have a resolution of at least 350 dpi (halftone) or 700 to 1100 dpi (line drawings) in relation to the imitation size. Please give the data for figures in black and white or submit a Color Work Agreement Form. EPS files must be saved with fonts embedded (and with a TIFF preview, if possible).

For scanned images, the scanning resolution (at final image size) ought to be as follows to ensure good reproduction: line art: >650 dpi; halftones (including gel photographs) : >350 dpi; figures containing both halftone and line images: >650 dpi.

Color Charges: It is the rule of the Global Journals Inc. (US) for authors to pay the full cost for the reproduction of their color artwork. Hence, please note that, if there is color artwork in your manuscript when it is accepted for publication, we would require you to complete and return a color work agreement form before your paper can be published.

Figure Legends: Self-explanatory legends of all figures should be incorporated separately under the heading 'Legends to Figures'. In the full-text online edition of the journal, figure legends may possibly be truncated in abbreviated links to the full screen version. Therefore, the first 100 characters of any legend should notify the reader, about the key aspects of the figure.

6. AFTER ACCEPTANCE

Upon approval of a paper for publication, the manuscript will be forwarded to the dean, who is responsible for the publication of the Global Journals Inc. (US).

6.1 Proof Corrections

The corresponding author will receive an e-mail alert containing a link to a website or will be attached. A working e-mail address must therefore be provided for the related author.

Acrobat Reader will be required in order to read this file. This software can be downloaded

(Free of charge) from the following website:

www.adobe.com/products/acrobat/readstep2.html. This will facilitate the file to be opened, read on screen, and printed out in order for any corrections to be added. Further instructions will be sent with the proof.

Proofs must be returned to the dean at dean@globaljournals.org within three days of receipt.

As changes to proofs are costly, we inquire that you only correct typesetting errors. All illustrations are retained by the publisher. Please note that the authors are responsible for all statements made in their work, including changes made by the copy editor.

6.2 Early View of Global Journals Inc. (US) (Publication Prior to Print)

The Global Journals Inc. (US) are enclosed by our publishing's Early View service. Early View articles are complete full-text articles sent in advance of their publication. Early View articles are absolute and final. They have been completely reviewed, revised and edited for publication, and the authors' final corrections have been incorporated. Because they are in final form, no changes can be made after sending them. The nature of Early View articles means that they do not yet have volume, issue or page numbers, so Early View articles cannot be cited in the conventional way.

6.3 Author Services

Online production tracking is available for your article through Author Services. Author Services enables authors to track their article - once it has been accepted - through the production process to publication online and in print. Authors can check the status of their articles online and choose to receive automated e-mails at key stages of production. The authors will receive an e-mail with a unique link that enables them to register and have their article automatically added to the system. Please ensure that a complete e-mail address is provided when submitting the manuscript.

6.4 Author Material Archive Policy

Please note that if not specifically requested, publisher will dispose off hardcopy & electronic information submitted, after the two months of publication. If you require the return of any information submitted, please inform the Editorial Board or dean as soon as possible.

6.5 Offprint and Extra Copies

A PDF offprint of the online-published article will be provided free of charge to the related author, and may be distributed according to the Publisher's terms and conditions. Additional paper offprint may be ordered by emailing us at: editor@globaljournals.org .

Before start writing a good quality Computer Science Research Paper, let us first understand what is Computer Science Research Paper? So, Computer Science Research Paper is the paper which is written by professionals or scientists who are associated to Computer Science and Information Technology, or doing research study in these areas. If you are novel to this field then you can consult about this field from your supervisor or guide.

TECHNIQUES FOR WRITING A GOOD QUALITY RESEARCH PAPER:

1. Choosing the topic: In most cases, the topic is searched by the interest of author but it can be also suggested by the guides. You can have several topics and then you can judge that in which topic or subject you are finding yourself most comfortable. This can be done by asking several questions to yourself, like Will I be able to carry our search in this area? Will I find all necessary recourses to accomplish the search? Will I be able to find all information in this field area? If the answer of these types of questions will be "Yes" then you can choose that topic. In most of the cases, you may have to conduct the surveys and have to visit several places because this field is related to Computer Science and Information Technology. Also, you may have to do a lot of work to find all rise and falls regarding the various data of that subject. Sometimes, detailed information plays a vital role, instead of short information.

2. Evaluators are human: First thing to remember that evaluators are also human being. They are not only meant for rejecting a paper. They are here to evaluate your paper. So, present your Best.

3. Think Like Evaluators: If you are in a confusion or getting demotivated that your paper will be accepted by evaluators or not, then think and try to evaluate your paper like an Evaluator. Try to understand that what an evaluator wants in your research paper and automatically you will have your answer.

4. Make blueprints of paper: The outline is the plan or framework that will help you to arrange your thoughts. It will make your paper logical. But remember that all points of your outline must be related to the topic you have chosen.

5. Ask your Guides: If you are having any difficulty in your research, then do not hesitate to share your difficulty to your guide (if you have any). They will surely help you out and resolve your doubts. If you can't clarify what exactly you require for your work then ask the supervisor to help you with the alternative. He might also provide you the list of essential readings.

6. Use of computer is recommended: As you are doing research in the field of Computer Science, then this point is quite obvious.

7. Use right software: Always use good quality software packages. If you are not capable to judge good software then you can lose quality of your paper unknowingly. There are various software programs available to help you, which you can get through Internet.

8. Use the Internet for help: An excellent start for your paper can be by using the Google. It is an excellent search engine, where you can have your doubts resolved. You may also read some answers for the frequent question how to write my research paper or find model research paper. From the internet library you can download books. If you have all required books make important reading selecting and analyzing the specified information. Then put together research paper sketch out.

9. Use and get big pictures: Always use encyclopedias, Wikipedia to get pictures so that you can go into the depth.

10. Bookmarks are useful: When you read any book or magazine, you generally use bookmarks, right! It is a good habit, which helps to not to lose your continuity. You should always use bookmarks while searching on Internet also, which will make your search easier.

11. Revise what you wrote: When you write anything, always read it, summarize it and then finalize it.

12. Make all efforts: Make all efforts to mention what you are going to write in your paper. That means always have a good start. Try to mention everything in introduction, that what is the need of a particular research paper. Polish your work by good skill of writing and always give an evaluator, what he wants.

13. Have backups: When you are going to do any important thing like making research paper, you should always have backup copies of it either in your computer or in paper. This will help you to not to lose any of your important.

14. Produce good diagrams of your own: Always try to include good charts or diagrams in your paper to improve quality. Using several and unnecessary diagrams will degrade the quality of your paper by creating "hotchpotch." So always, try to make and include those diagrams, which are made by your own to improve readability and understandability of your paper.

15. Use of direct quotes: When you do research relevant to literature, history or current affairs then use of quotes become essential but if study is relevant to science then use of quotes is not preferable.

16. Use proper verb tense: Use proper verb tenses in your paper. Use past tense, to present those events that happened. Use present tense to indicate events that are going on. Use future tense to indicate future happening events. Use of improper and wrong tenses will confuse the evaluator. Avoid the sentences that are incomplete.

17. Never use online paper: If you are getting any paper on Internet, then never use it as your research paper because it might be possible that evaluator has already seen it or maybe it is outdated version.

18. Pick a good study spot: To do your research studies always try to pick a spot, which is quiet. Every spot is not for studies. Spot that suits you choose it and proceed further.

19. Know what you know: Always try to know, what you know by making objectives. Else, you will be confused and cannot achieve your target.

20. Use good quality grammar: Always use a good quality grammar and use words that will throw positive impact on evaluator. Use of good quality grammar does not mean to use tough words, that for each word the evaluator has to go through dictionary. Do not start sentence with a conjunction. Do not fragment sentences. Eliminate one-word sentences. Ignore passive voice. Do not ever use a big word when a diminutive one would suffice. Verbs have to be in agreement with their subjects. Prepositions are not expressions to finish sentences with. It is incorrect to ever divide an infinitive. Avoid clichés like the disease. Also, always shun irritating alliteration. Use language that is simple and straight forward. put together a neat summary.

21. Arrangement of information: Each section of the main body should start with an opening sentence and there should be a changeover at the end of the section. Give only valid and powerful arguments to your topic. You may also maintain your arguments with records.

22. Never start in last minute: Always start at right time and give enough time to research work. Leaving everything to the last minute will degrade your paper and spoil your work.

23. Multitasking in research is not good: Doing several things at the same time proves bad habit in case of research activity. Research is an area, where everything has a particular time slot. Divide your research work in parts and do particular part in particular time slot.

24. Never copy others' work: Never copy others' work and give it your name because if evaluator has seen it anywhere you will be in trouble.

25. Take proper rest and food: No matter how many hours you spend for your research activity, if you are not taking care of your health then all your efforts will be in vain. For a quality research, study is must, and this can be done by taking proper rest and food.

26. Go for seminars: Attend seminars if the topic is relevant to your research area. Utilize all your resources.

27. Refresh your mind after intervals: Try to give rest to your mind by listening to soft music or by sleeping in intervals. This will also improve your memory.

28. Make colleagues: Always try to make colleagues. No matter how sharper or intelligent you are, if you make colleagues you can have several ideas, which will be helpful for your research.

29. Think technically: Always think technically. If anything happens, then search its reasons, its benefits, and demerits.

30. Think and then print: When you will go to print your paper, notice that tables are not be split, headings are not detached from their descriptions, and page sequence is maintained.

31. Adding unnecessary information: Do not add unnecessary information, like, I have used MS Excel to draw graph. Do not add irrelevant and inappropriate material. These all will create superfluous. Foreign terminology and phrases are not apropos. One should NEVER take a broad view. Analogy in script is like feathers on a snake. Not at all use a large word when a very small one would be sufficient. Use words properly, regardless of how others use them. Remove quotations. Puns are for kids, not grunt readers. Amplification is a billion times of inferior quality than sarcasm.

32. Never oversimplify everything: To add material in your research paper, never go for oversimplification. This will definitely irritate the evaluator. Be more or less specific. Also too, by no means, ever use rhythmic redundancies. Contractions aren't essential and shouldn't be there used. Comparisons are as terrible as clichés. Give up ampersands and abbreviations, and so on. Remove commas, that are, not necessary. Parenthetical words however should be together with this in commas. Understatement is all the time the complete best way to put onward earth-shaking thoughts. Give a detailed literary review.

33. Report concluded results: Use concluded results. From raw data, filter the results and then conclude your studies based on measurements and observations taken. Significant figures and appropriate number of decimal places should be used. Parenthetical remarks are prohibitive. Proofread carefully at final stage. In the end give outline to your arguments. Spot out perspectives of further study of this subject. Justify your conclusion by at the bottom of them with sufficient justifications and examples.

34. After conclusion: Once you have concluded your research, the next most important step is to present your findings. Presentation is extremely important as it is the definite medium through which your research is going to be in print to the rest of the crowd. Care should be taken to categorize your thoughts well and present them in a logical and neat manner. A good quality research paper format is essential because it serves to highlight your research paper and bring to light all necessary aspects in your research.

INFORMAL GUIDELINES OF RESEARCH PAPER WRITING

Key points to remember:

- Submit all work in its final form.
- Write your paper in the form, which is presented in the guidelines using the template.
- Please note the criterion for grading the final paper by peer-reviewers.

Final Points:

A purpose of organizing a research paper is to let people to interpret your effort selectively. The journal requires the following sections, submitted in the order listed, each section to start on a new page.

The introduction will be compiled from reference matter and will reflect the design processes or outline of basis that direct you to make study. As you will carry out the process of study, the method and process section will be constructed as like that. The result segment will show related statistics in nearly sequential order and will direct the reviewers next to the similar intellectual paths throughout the data that you took to carry out your study. The discussion section will provide understanding of the data and projections as to the implication of the results. The use of good quality references all through the paper will give the effort trustworthiness by representing an alertness of prior workings.

Writing a research paper is not an easy job no matter how trouble-free the actual research or concept. Practice, excellent preparation, and controlled record keeping are the only means to make straightforward the progression.

General style:

Specific editorial column necessities for compliance of a manuscript will always take over from directions in these general guidelines.

To make a paper clear

- Adhere to recommended page limits

Mistakes to evade

- Insertion a title at the foot of a page with the subsequent text on the next page
- Separating a table/chart or figure - impound each figure/table to a single page
- Submitting a manuscript with pages out of sequence

In every sections of your document

- Use standard writing style including articles ("a", "the," etc.)
- Keep on paying attention on the research topic of the paper
- Use paragraphs to split each significant point (excluding for the abstract)
- Align the primary line of each section
- Present your points in sound order
- Use present tense to report well accepted
- Use past tense to describe specific results
- Shun familiar wording, don't address the reviewer directly, and don't use slang, slang language, or superlatives
- Shun use of extra pictures - include only those figures essential to presenting results

Title Page:

Choose a revealing title. It should be short. It should not have non-standard acronyms or abbreviations. It should not exceed two printed lines. It should include the name(s) and address (es) of all authors.

Abstract:

The summary should be two hundred words or less. It should briefly and clearly explain the key findings reported in the manuscript-- must have precise statistics. It should not have abnormal acronyms or abbreviations. It should be logical in itself. Shun citing references at this point.

An abstract is a brief distinct paragraph summary of finished work or work in development. In a minute or less a reviewer can be taught the foundation behind the study, common approach to the problem, relevant results, and significant conclusions or new questions.

Write your summary when your paper is completed because how can you write the summary of anything which is not yet written? Wealth of terminology is very essential in abstract. Yet, use comprehensive sentences and do not let go readability for brevity. You can maintain it succinct by phrasing sentences so that they provide more than lone rationale. The author can at this moment go straight to shortening the outcome. Sum up the study, with the subsequent elements in any summary. Try to maintain the initial two items to no more than one ruling each.

- Reason of the study - theory, overall issue, purpose
- Fundamental goal
- To the point depiction of the research
- Consequences, including definite statistics - if the consequences are quantitative in nature, account quantitative data; results of any numerical analysis should be reported
- Significant conclusions or questions that track from the research(es)

Approach:

- Single section, and succinct
- As an outline of job done, it is always written in past tense
- A conceptual should situate on its own, and not submit to any other part of the paper such as a form or table
- Center on shortening results - bound background information to a verdict or two, if completely necessary
- What you account in an abstract must be regular with what you reported in the manuscript
- Exact spelling, clearness of sentences and phrases, and appropriate reporting of quantities (proper units, important statistics) are just as significant in an abstract as they are anywhere else

Introduction:

The **Introduction** should "introduce" the manuscript. The reviewer should be presented with sufficient background information to be capable to comprehend and calculate the purpose of your study without having to submit to other works. The basis for the study should be offered. Give most important references but shun difficult to make a comprehensive appraisal of the topic. In the introduction, describe the problem visibly. If the problem is not acknowledged in a logical, reasonable way, the reviewer will have no attention in your result. Speak in common terms about techniques used to explain the problem, if needed, but do not present any particulars about the protocols here. Following approach can create a valuable beginning:

- Explain the value (significance) of the study
- Shield the model - why did you employ this particular system or method? What is its compensation? You strength remark on its appropriateness from a abstract point of vision as well as point out sensible reasons for using it.
- Present a justification. Status your particular theory (es) or aim(s), and describe the logic that led you to choose them.
- Very for a short time explain the tentative propose and how it skilled the declared objectives.

Approach:

- Use past tense except for when referring to recognized facts. After all, the manuscript will be submitted after the entire job is done.
- Sort out your thoughts; manufacture one key point with every section. If you make the four points listed above, you will need a least of four paragraphs.

- Present surroundings information only as desirable in order hold up a situation. The reviewer does not desire to read the whole thing you know about a topic.
- Shape the theory/purpose specifically - do not take a broad view.
- As always, give awareness to spelling, simplicity and correctness of sentences and phrases.

Procedures (Methods and Materials):

This part is supposed to be the easiest to carve if you have good skills. A sound written Procedures segment allows a capable scientist to replacement your results. Present precise information about your supplies. The suppliers and clarity of reagents can be helpful bits of information. Present methods in sequential order but linked methodologies can be grouped as a segment. Be concise when relating the protocols. Attempt for the least amount of information that would permit another capable scientist to spare your outcome but be cautious that vital information is integrated. The use of subheadings is suggested and ought to be synchronized with the results section. When a technique is used that has been well described in another object, mention the specific item describing a way but draw the basic principle while stating the situation. The purpose is to text all particular resources and broad procedures, so that another person may use some or all of the methods in one more study or referee the scientific value of your work. It is not to be a step by step report of the whole thing you did, nor is a methods section a set of orders.

Materials:

- Explain materials individually only if the study is so complex that it saves liberty this way.
- Embrace particular materials, and any tools or provisions that are not frequently found in laboratories.
- Do not take in frequently found.
- If use of a definite type of tools.
- Materials may be reported in a part section or else they may be recognized along with your measures.

Methods:

- Report the method (not particulars of each process that engaged the same methodology)
- Describe the method entirely
- To be succinct, present methods under headings dedicated to specific dealings or groups of measures
- Simplify - details how procedures were completed not how they were exclusively performed on a particular day.
- If well known procedures were used, account the procedure by name, possibly with reference, and that's all.

Approach:

- It is embarrassed or not possible to use vigorous voice when documenting methods with no using first person, which would focus the reviewer's interest on the researcher rather than the job. As a result when script up the methods most authors use third person passive voice.
- Use standard style in this and in every other part of the paper - avoid familiar lists, and use full sentences.

What to keep away from

- Resources and methods are not a set of information.
- Skip all descriptive information and surroundings - save it for the argument.
- Leave out information that is immaterial to a third party.

Results:

The principle of a results segment is to present and demonstrate your conclusion. Create this part a entirely objective details of the outcome, and save all understanding for the discussion.

The page length of this segment is set by the sum and types of data to be reported. Carry on to be to the point, by means of statistics and tables, if suitable, to present consequences most efficiently. You must obviously differentiate material that would usually be incorporated in a study editorial from any unprocessed data or additional appendix matter that would not be available. In fact, such matter should not be submitted at all except requested by the instructor.

Content

- Sum up your conclusion in text and demonstrate them, if suitable, with figures and tables.
- In manuscript, explain each of your consequences, point the reader to remarks that are most appropriate.
- Present a background, such as by describing the question that was addressed by creation an exacting study.
- Explain results of control experiments and comprise remarks that are not accessible in a prescribed figure or table, if appropriate.
- Examine your data, then prepare the analyzed (transformed) data in the form of a figure (graph), table, or in manuscript form.

What to stay away from

- Do not discuss or infer your outcome, report surroundings information, or try to explain anything.
- Not at all, take in raw data or intermediate calculations in a research manuscript.
- Do not present the similar data more than once.
- Manuscript should complement any figures or tables, not duplicate the identical information.
- Never confuse figures with tables - there is a difference.

Approach

- As forever, use past tense when you submit to your results, and put the whole thing in a reasonable order.
- Put figures and tables, appropriately numbered, in order at the end of the report
- If you desire, you may place your figures and tables properly within the text of your results part.

Figures and tables

- If you put figures and tables at the end of the details, make certain that they are visibly distinguished from any attach appendix materials, such as raw facts
- Despite of position, each figure must be numbered one after the other and complete with subtitle
- In spite of position, each table must be titled, numbered one after the other and complete with heading
- All figure and table must be adequately complete that it could situate on its own, divide from text

Discussion:

The Discussion is expected the trickiest segment to write and describe. A lot of papers submitted for journal are discarded based on problems with the Discussion. There is no head of state for how long a argument should be. Position your understanding of the outcome visibly to lead the reviewer through your conclusions, and then finish the paper with a summing up of the implication of the study. The purpose here is to offer an understanding of your results and hold up for all of your conclusions, using facts from your research and generally accepted information, if suitable. The implication of result should be visibly described. Infer your data in the conversation in suitable depth. This means that when you clarify an observable fact you must explain mechanisms that may account for the observation. If your results vary from your prospect, make clear why that may have happened. If your results agree, then explain the theory that the proof supported. It is never suitable to just state that the data approved with prospect, and let it drop at that.

- Make a decision if each premise is supported, discarded, or if you cannot make a conclusion with assurance. Do not just dismiss a study or part of a study as "uncertain."
- Research papers are not acknowledged if the work is imperfect. Draw what conclusions you can based upon the results that you have, and take care of the study as a finished work
- You may propose future guidelines, such as how the experiment might be personalized to accomplish a new idea.
- Give details all of your remarks as much as possible, focus on mechanisms.
- Make a decision if the tentative design sufficiently addressed the theory, and whether or not it was correctly restricted.
- Try to present substitute explanations if sensible alternatives be present.
- One research will not counter an overall question, so maintain the large picture in mind, where do you go next? The best studies unlock new avenues of study. What questions remain?
- Recommendations for detailed papers will offer supplementary suggestions.

Approach:

- When you refer to information, differentiate data generated by your own studies from available information
- Submit to work done by specific persons (including you) in past tense.
- Submit to generally acknowledged facts and main beliefs in present tense.

THE ADMINISTRATION RULES

Please carefully note down following rules and regulation before submitting your Research Paper to Global Journals Inc. (US):

Segment Draft and Final Research Paper: You have to strictly follow the template of research paper. If it is not done your paper may get rejected.

- The **major constraint** is that you must independently make all content, tables, graphs, and facts that are offered in the paper. You must write each part of the paper wholly on your own. The Peer-reviewers need to identify your own perceptives of the concepts in your own terms. NEVER extract straight from any foundation, and never rephrase someone else's analysis.
- Do not give permission to anyone else to "PROOFREAD" your manuscript.
- **Methods to avoid Plagiarism is applied by us on every paper, if found guilty, you will be blacklisted by all of our collaborated research groups, your institution will be informed for this and strict legal actions will be taken immediately.)**
- To guard yourself and others from possible illegal use please do not permit anyone right to use to your paper and files.

CRITERION FOR GRADING A RESEARCH PAPER (COMPILATION)
BY GLOBAL JOURNALS INC. (US)

Please note that following table is only a Grading of "Paper Compilation" and not on "Performed/Stated Research" whose grading solely depends on Individual Assigned Peer Reviewer and Editorial Board Member. These can be available only on request and after decision of Paper. This report will be the property of Global Journals Inc. (US).

Topics	Grades		
	A-B	C-D	E-F
<i>Abstract</i>	Clear and concise with appropriate content, Correct format. 200 words or below	Unclear summary and no specific data, Incorrect form Above 200 words	No specific data with ambiguous information Above 250 words
<i>Introduction</i>	Containing all background details with clear goal and appropriate details, flow specification, no grammar and spelling mistake, well organized sentence and paragraph, reference cited	Unclear and confusing data, appropriate format, grammar and spelling errors with unorganized matter	Out of place depth and content, hazy format
<i>Methods and Procedures</i>	Clear and to the point with well arranged paragraph, precision and accuracy of facts and figures, well organized subheads	Difficult to comprehend with embarrassed text, too much explanation but completed	Incorrect and unorganized structure with hazy meaning
<i>Result</i>	Well organized, Clear and specific, Correct units with precision, correct data, well structuring of paragraph, no grammar and spelling mistake	Complete and embarrassed text, difficult to comprehend	Irregular format with wrong facts and figures
<i>Discussion</i>	Well organized, meaningful specification, sound conclusion, logical and concise explanation, highly structured paragraph reference cited	Wordy, unclear conclusion, spurious	Conclusion is not cited, unorganized, difficult to comprehend
<i>References</i>	Complete and correct format, well organized	Beside the point, Incomplete	Wrong format and structuring
